TENDER SPECIFICATIONS

TENDER FOR SUPPLY, DELIVERY AND MAINTENANCE OF A CAPITAL PLANNING, CAPITAL PRIORITISATION / BUDGETING AND CAPITAL PERFORMANCE MONITORING SYSTEM FOR A PERIOD OF FIVE YEARS

BACKGROUND OF REQUIREMENT

George Municipality invites prospective bidders to submit detailed bids for supply and delivery of a capital planning, capital prioritisation / budgeting and capital performance monitoring system with support and maintenance for a period of **five years**. The purpose of the system is to serve as a digital Integrated Development Program (IDP), Budget and Spatial Development Framework process platform and must automate the local government accountability cycle as required by the South African National Treasury Department.

The municipality is looking for an experienced bidder with a proven system and with verifiable references from other municipalities, preferably intermediary cities, who can provide a system and process support that will provide the municipality with the ability to use it for integrated capital planning-, prioritisation-, resource planning-; budgeting; capital programme implementation tracking-; and full life-cycle planning.

It has to be a system which is designed with the public sector infrastructure environment in mind and should provide mSCOA tagged outputs on the proposed budgets emanating from the IDP process facilitated by the system. The system must have a proven record of assisting municipalities to comply with MFMA regulations and must be able to integrate via Application Programming Interface (API) protocols with the municipality's Financial Management System. The system must allow for configuration and customisation to facilitate the specific requirements of the George Municipality.

The capital investment referred to here and in the rest of this document relates to the core business of our municipality insofar as investment implies capital expenditure towards the provision, refurbishment, replacement, upgrading or maintenance of infrastructure. The term 'investment' should not be confused with financial investment in equities, markets or other instruments within the financial realm – in this document it strictly implies the built environment and the investment of capital towards the fulfilment of our municipality's legislated mandates in terms of infrastructure provision.

The system must assist all within the municipality to collaborate and have transversal sight of capital needs. To make sure all needs are comprehensively registered, all projects must be subjected to a proper process of governance and project preparation with the overall objective to improve the impact of service delivery from the planning, budgeting and implementation of their capital investments. Clear alignment must be shown between the Spatial Development Framework (SDF) and Capital Expenditure Framework (CEF).

SCOPE OF WORK

The purpose of the capital investment management system is to manage and facilitate our capital planning, prioritisation, budgeting and project programme implementation monitoring processes. Selected officials from the municipality must have the ability to monitor and appraise the status of each of these elements in real time by means of dashboards that are responsive and easy to interrogate. There needs to be differentiation between various permissions. The functionality provided must ensure that these processes that are facilitated by the system comply and aligns with relevant legislative frameworks, governance policies and industry best-practice. Compliance should be detailed in your response to demonstrate your understanding of the relevant policies and legislation referred to here. The functionality must also be able to support and input into the performance management systems (including electronic systems) of the municipality.

The following elements of functionality are of importance:

General

- A secure, accessible, online environment where project views can be set up in accordance to municipal roles, functions and individual mandates and responsibilities.
- An administrative area where the IT department can control, monitor, vet and manage usage of the system.
- The system should be geospatially enabled and have the ability to import and export GIS files.
- The impact (technical, social and economic) of capital projects is displayed spatially on a mapping environment that is integrated with the municipality's GIS system.
- Reporting requirements of various National oversight and regulatory bodies must be facilitated on the system with the ability to provide reports directly in MS Excel and MS Word format, ready to use and customise.
- The system must be able to integrate seamlessly with other core systems of the municipality i.e. the FMS (SAMRAS), GIS, etc.
- The system should allow for the bulk uploading or bulk customisation of project details to save officials time in the event of sweeping changes that may be required and/or for the initial data take-on process.
- There should be no limitation on the number of users or any "pay per user" model as the municipality requires that a variety of officials must be able to use the system simultaneously and gain benefit from its use in their respective areas. In addition, there should be no limitation to the number of projects or on the number of financial years that the system caters for – these aspects should not incur additional cost to the municipality should the numbers on any of these aspect increase.
- It is important that the incumbent service provider demonstrates how this process will save the municipality time in terms of efficiencies and how this process may benefit the municipality financially otherwise.

- Besides initial training for the users, multi-media materials (eg videos and infographics) must be available in order to provide further and ongoing training and system updates.

IDP, SDF and Project Planning

- The facilitation of the project planning and project preparation processes from conceptualisation to maturity.
- Assurance that implementation is aligned to the strategic focus areas and spatial imperatives (eg catalytic projects and restructuring and densification zones) of the municipality and that all data is centralised within one database;
- Officials must have the ability on the system to capture project programmes comprising of various sub-projects. The status of projects in terms of the completeness of project data and/or in terms of the level of project preparedness must be indicated on the system.
- The system should allow users to upload supporting documents (EIA approvals, project reports, drawings, tender documents, etc.) to a specific project as artefacts of evidence of readiness and/or progress.

Prioritisation

- Customisable prioritisation of a variety of capital needs with the ability to incorporate a combination of spatial, numeric, thematic and/or subjective criteria. The prioritisation tool should assist with the determination of optimal scenarios from a strategic-, economic-, financial-, technical-, environmental- and climate change perspective.
- It should be intelligent to allow for the expedient testing of various scenarios in terms of their alignment with financial constraints, backlog eradication, political directives, technical inputs, economic drivers, climate change objectives or a weighted combination of these considerations.
- The prioritisation process is transparent, collaborative and inclusive of all of the municipality's needs and priorities;
- The prioritisation methodology must align with the requirements of legislation as contained in the constitution, SPLUMA, the MFMA and the various regulations and guidelines provided by National Treasury pertaining to the IDP and SDF and the associated budget development requirements. The analysis must accommodate a range of customisable weightings assigned to the respective criteria. The service provider will therefore have to arrange workshops with the relevant municipal officials in order to determine the desired outcomes for purposes of model calibration.
- The current SDF makes provision for a prioritisation model. This model should be interrogated for best use.
- The system must be able to provide reports on the prioritisation process spatially.

Budget Development Process

- Sophisticated budgeting tooling that allows for rule-base funding allocation, grant optimisation, pre-determined minimum allocations to departments, divisions, portfolios or other thematic groupings and incorporation of rule sets and Municipal Standard Chart of Accounts.
- The system must provide functionality for the process of budget development through a process of customisable and considered prioritisation criteria that do not solely rely on the subjective input from officials (note that provision for the priority input from officials is required also).
- This process must assist the municipality in the development of defensible, evidence-based, short, medium and long-term capital budgets and must make use of the prioritisation model's outcomes in the process. The prioritisation model and its outcomes must be developed in collaboration with officials. The prioritisation functionality must assist the municipality to distil structure and order from numerous capital demands, taking into account a range of considerations unique and specific to our municipality.

Programme Management

- The George Municipality must be able to use the system to track the physical implementation of each project with supporting evidence whilst having a real-time view on the flow of funding with respect to such projects;
- The system must enable the municipality to track the implementation of the projects that are being implemented against implementation schedules (that include milestones and cash-flows) that are set up on the system by the respective project managers.
- The Planning and Progress functionality must facilitate Component 5 of the SDBIP as specified in MFMA Circular 13 and must provide the municipality's annual and adjusted Procurement Plans / Capital Works Plan. Capital projects approved as part of the municipality's original, tabled and/or adjusted budget have to undergo detailed project planning which includes setting of annual and quarterly deliverables, monthly milestones and cashflow planning.
- Monitoring and In-year Reporting must be accommodated by the system and should allow for both non-financial and financial performance tracking on an annual, quarterly and monthly basis.
- The information collected on the non-financial performance of projects will be key inputs to the quarterly and monthly reporting requirements and should allow the municipality to monitor implementation progress together with project risk mitigation and management. Information must be easily extractable for reporting purposes.
- Project managers must be able to plan their cash-flows and project implementation phases, sub-phases and milestones on the system in accordance to National Treasury's FIDPM guidelines.
- The system must enable the municipality to perform in-year reporting with efficiency. The system dashboard should highlight where serious discrepancies emerge between actual progress and expenditure.

- The system must facilitate the ability to appraise the overall status of the municipality of being able to meet its expenditure targets. Project views and reports must be available in familiar formats that conforms with government's project life-cycle management principles.
- Users must be able to export Gantt-charts and cash-flows for use in presentations and other reporting documentation.

PRICING

Within the pricing schedule the following breakdown of pricing will be required:

License Fees:

- A once off initialisation and data take-on fee.
- Annual licensing fees, including all software support, maintenance and upgrades in accordance to a proposed Service Level Agreement that should be provided as part of this tender for consideration (Note: The Municipality is under no obligation to use or accept such Service Level Agreement and reserves the right to amend or altogether change the requirements of the Service Level Agreement based on its own existing template);
- Training and Process support fees, where fees will be paid in accordance to schedules with specific milestones pertaining to training and other processes that form part of the annual IDP and budget process.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:
 - 1 **Includes price quotations, advertised competitive bids, limited bids and proposals.**
 - 2 **Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.**

21.4 Except as provided under GCC Clause 25, a delay by the supplier in the performance of its delivery obligations shall render the supplier liable to the imposition of penalties, pursuant to GCC Clause 22, unless an extension of time is agreed upon pursuant to GCC Clause 22.2 without the application of penalties.

However, the supplier shall continue performance of the contract to the extent not terminated.
- 23.3 Where the purchaser terminates the contract in whole or in part, the purchaser may decide to impose a restriction penalty on the supplier by prohibiting such supplier from doing business with the public sector for a period not exceeding 10 years.
