1.25 INTERGOVERNMENTAL RELATIONS.....	31
1.25.1 Transversal Partnering.....	32
1.25.2 Intergovernmental Partnering.....	32
1.25.3 Cross-Boundary Partnering.....	33
CHAPTER 2: STATE OF THE GREATER GEORGE AREA.....	35
2.1 INTRODUCTION	35

2.2	WARD DEMARCATION.....	36
2.3	GEORGE MUNICIPALITY AT A GLANCE	40
2.4	SOCIO – ECONOMIC CONTEXT.....	41
2.4.1	Population and Household Growth	41
2.4.2	Gender, Age and Race Dynamics	41
2.4.3	Level of Urbanisation and Population Density	43
2.5	EDUCATION	43
2.5.1	Learner enrolment and teacher-learner ratio	43
2.5.2	Education and Infrastructure Facilities	44
2.5.3	Learner Retention.....	45
2.5.4	Education Outcomes	45
2.6	HEALTH	46
2.6.1	Health Facilities	46
2.6.2	Maternal Health and Child Health	47
2.6.3	GDPR Per Capita.....	50
2.6.4	Income Inequality.....	50
2.6.5	Poverty	51
2.7	BASIC SERVICE DELIVERY.....	53
2.7.1	Housing and household services	54
2.7.2	Free Basic Services.....	54
2.8	SAFETY AND SECURITY	55
2.8.1	Crime rates in the GRD and George Municipality.....	55
2.8.2	Total reported cases of Crime	56
2.9	GDP PERFORMANCE	57
2.9.1	Sectoral Overview	57
2.10	LABOUR MARKET PERFORMANCE	59
2.11	RISK AND VULNERABILITY FACTORS	61
2.11.1	Sea Level and Storm surges	61
2.11.2	Drought	61
2.11.3	Environmental threats and climate change.....	61
2.11.4	Disaster Risk	61
2.11.5	Floods	61
2.11.6	Wildfires	61
2.12	CONCLUSION.....	63
CHAPTER 3: STRATEGIC POLICY CONTEXT		64
3.1	MUNICIPAL VISION AND STRATEGY	64
3.2	MUNICIPAL STRATEGIC OBJECTIVES	65
3.2.1	Strategic Objective 01: Develop and Grow George	65
3.2.2	Strategic Objective 02: Safe, Clean and Green	67
3.2.3	Strategic Objective 03: Affordable Quality Services	69
3.2.4	Strategic Objective 04: Participative Partnerships	71
3.2.5	Strategic Objective 05: Good Governance and Human Capital	73
3.3	UNIVERSAL POLICY DIRECTION.....	74

3.3.1	Sustainable Development Goals (SDGs)	75
3.4	NATIONAL POLICY DIRECTION	75
3.4.1	National Strategic Outcomes	76
3.4.2	National Development Plan (NDP) – 2030	76
3.4.3	Medium Term Strategic Framework 2019 – 2024 (MTSF)	77
3.4.4	National District Development Model and One Plan	78
3.4.5	Integrated Urban Development Framework (IUDF)	79
3.4.6	National Spatial Development Framework (NSDF)	79
3.5	PROVINCIAL POLICY DIRECTION	80
3.5.1	The Western Cape Government Provincial Strategic Plan 2019 – 2024	80
3.6	THE GARDEN ROUTE DISTRICT MUNICIPALITY (GRDM) STRATEGIC FOCUS	81
3.7	LOCAL POLICY DIRECTION	82
3.7.1	George Municipality	82
3.8	GARDEN ROUTE DISTRICT PROJECTS	83
3.8.1	Regional Landfill Site	83
3.8.2	Skills Mecca	84
3.8.3	Participation Of Garden Route District Municipality in the Youth Environmental Service 2022/2025 Project	85
3.8.4	Growth and Development Strategy	86
3.9	ANNUAL REVIEW PROCESS	86
3.10	PROJECT PRIORITIZATION	87
3.10.1	Capital programme and project prioritisation	88
3.10.2	IDP Strategic Objectives	88
3.10.3	Master Plan Objectives	88
3.10.4	Project Dynamics	88
3.10.5	Project Consequence	88
3.10.6	Financial Resources	89
3.11	CAPITAL EXPENDITURE FRAMEWORK	89
3.12	SMART CITY PRINCIPLES - A CITY OF THE FUTURE	91
3.12.1	Elements of a Smart City	92
3.12.2	Smart City Strategic Objectives	92
3.12.3	Smart City Outcomes	93
CHAPTER 4: SECTOR PLANS AND IMPLEMENTATION		101
4.1	INTRODUCTION	101
4.2	THE RELATIONSHIP BETWEEN THE SECTOR PLANS AND STRATEGIES	97
4.3	SECTOR PLANS AND IMPLEMENTATION STRATEGIES	99
4.3.8	Air Quality Management Plan	119
4.3.9	Public Transport Plan	125
4.3.10	Comprehensive Integrated Transport Plan	126
4.3.11	Water Services Development Plan (WSDP)	131
4.3.12	Bulk Raw Water Resources Study	132
4.3.13	Sewerage Master Plan	144
4.3.14	Roads Master Plan	149
4.3.15	Roads Pavement Management Plan	151

4.3.16	Stormwater Master Plan	152
4.3.17	Environmental Management and Conservation.....	155
4.3.18	Integrated Waste Management Plan	170
4.3.19	Community Safety and Security	174
4.3.20	Disaster Management	179
4.3.21	Economic Development Strategy	213
4.3.22	ICT Strategy	218
4.3.23	Community Development	220
4.3.24	Workplace Skills Plan	227
CHAPTER 5: SPATIAL DEVELOPMENT FRAMEWORK		229
5.1	THE PURPOSE OF THE SPATIAL DEVELOPMENT FRAMEWORK	229
5.2	THE FOCUS OF THE MSDFs	229
5.3	THE RELATIONSHIP BETWEEN THE MSDF AND IDP	230
5.4	THE LEGISLATIVE FRAMEWORK OF MUNICIPAL SDFs.....	230
5.5	GEORGE MUNICIPALITY'S WORK ON ITS MSDF.....	231
5.6	THE SPATIAL CHALLENGES AND OPPORTUNITIES IDENTIFIED IN THE REVIEW OF THE 2019 MSDF	233
5.7	THE SPATIAL PROPOSALS OF THE SDF	236
5.7.1	Spatial development 20 -year vision statement.....	236
5.7.2	Strategic Focus and Spatial Alignment between the IDP and MSDF	236
5.7.3	Spatial Proposals and Structuring Elements of the SDF.....	237
5.8	IMPLEMENTATION FRAMEWORK	245
5.8.1	SPLUMA REQUIREMENTS	245
5.8.2	Settlement hierarchy, priority development areas and themes	246
5.8.3	Result: Evaluation: Capital Expenditure in Priority Areas	249
5.8.4	Policy Framework	249
5.9	CATALYTIC INITIATIVES.....	250
5.10	INTERNAL- AND INTER-MUNICIPAL PLANNING.....	250
5.11	PRIVATE SECTOR JOINT PLANNING	250
5.12	FURTHER PLANNING WORK.....	250
5.13	CHECKLIST IN SUPPORT OF DECISION MAKING	251
CHAPTER 6: WARD PRIORITIES AND PLANNING		252
6.1	INTRODUCTION	252
6.2	COMMUNITY PARTICIPATION	252
6.3	DRAFTING OF THE 5TH GENERATION IDP 2022 – 2027 PUBLIC PARTICIPATION	253
6.4	PUBLIC PARTICIPATION STATISTICS (PRIOR YEAR)	253
6.5	PUBLIC PARTICIPATION PROCESS 2024	254
6.6	SECTOR DEPARTMENT ENGAGEMENTS	254
6.7	PARTICIPATORY IMPROVEMENTS.....	255
6.8	SUMMARY OF NEEDS AND PRIORITIES	256
6.9	SECTOR DEPARTMENT PRIORITIES	258
6.10	WARD PRIORITIES	262
6.11	PROVINCIALY LINKED PRIORITIES	389
6.12	SECTOR INVESTMENT	390

6.13.1	Spatial distribution of allocations to municipalities over MTEF period 2024/25-2026/27	394
6.13.2	Provincial Infrastructure investment projects (Medium Term Expenditure Framework (METF) (2024/25- 2026/27)	395

Integrated Development Plan for 2023 – 2027

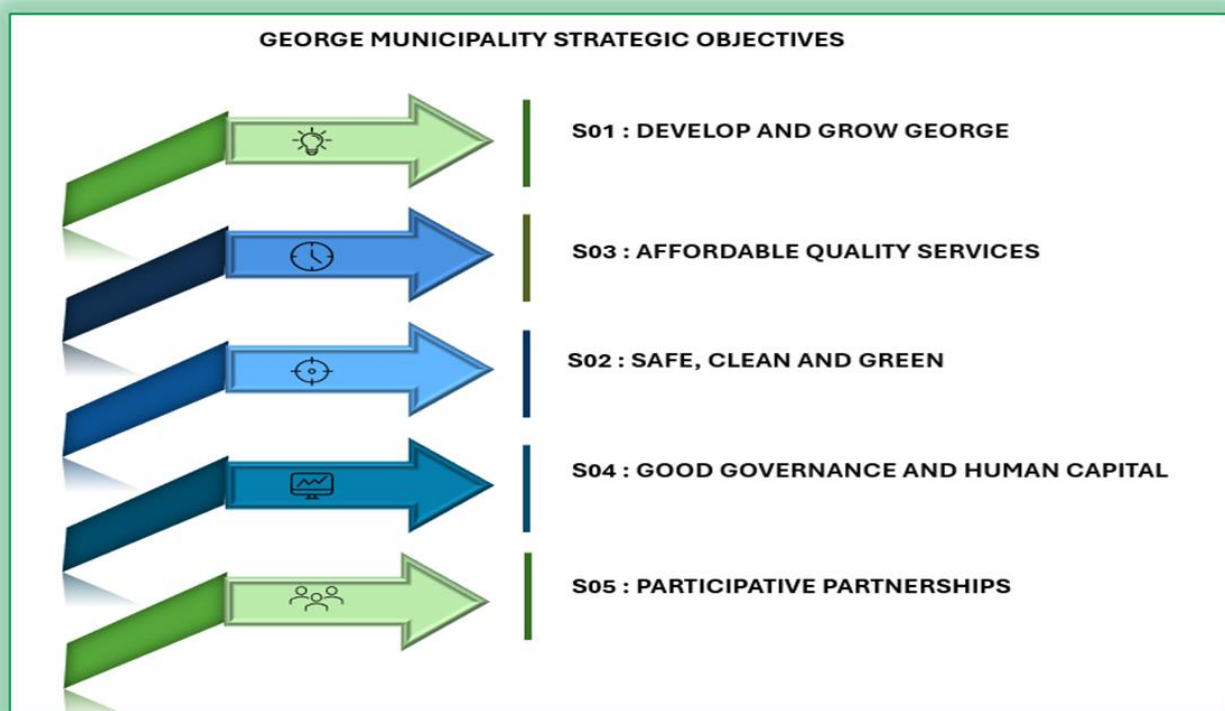

Compiled in terms of the Local Government: Municipal Systems Act, 2000 (Act No. 32 of 2000)

The Integrated Development Plan is the municipality's principal five-year strategic plan that deals with the most critical development needs of the municipal area (external focus) as well as the most critical governance needs of the organisation (internal focus).

The Integrated Development Plan –

- is approved by the council within a year of a municipal election and is in effect for the duration of the five- year term of the council that elected it;
- is drafted and reviewed annually with participation from the local community, interested state organs, and other stakeholders.
- directs and informs all development and planning, as well as all decisions related to management and development;
- acts as the basis and framework for the municipality's annual budgets, performance management system, and medium-term expenditure framework;
- seeks to promote integration by achieving a balance between the social, economic, and environmental pillars of sustainable development without compromising the institutional capacity required for implementation, and by facilitating

Strategic Overview

Foreword by the Executive Mayor

It is with a profound sense of purpose and responsibility that I present this review of the Integrated Development Plan (IDP) for the 2024-2025 period for George Municipality. As we embark on this journey, we are reminded of the importance of integrated planning in shaping our vibrant community and addressing the complex challenges that lie ahead.

Over the years, our municipality has achieved significant milestones, often surpassing our goals and targets. However, we recognize that new and existing challenges require us to do even more. We must serve our community with greater dedication and excellence, and this process begins with the review of this living document, which reflects the aspirations, priorities, and concerns of our residents, businesses, civil society, and government agencies.

Our goal as a municipality is straightforward: to implement solution-driven initiatives and innovations that focus on socio-economic development, ensuring that our excellent standard of service delivery, good governance, and financial management is maintained. We strive to create a municipality that is clean, green, safe, and responsive to the needs of our residents. Furthermore, we are committed to positioning our municipal area as an attractive destination for all reasons.

This IDP is the result of extensive collaboration and consultation with our stakeholders, including residents, businesses, civil society, and government agencies. It provides a comprehensive framework for addressing the challenges we face, while capitalising on emerging opportunities to enhance the well-being of all our citizens.

Our key focus areas include improving infrastructure, promoting economic growth, addressing poverty, and enhancing public safety. By prioritizing these areas, Council is laying the groundwork for a more prosperous and sustainable future for the whole of George.

The IDP underscores our unwavering commitment to good governance, transparency, accountability, and financial stability. It sets out clear goals, objectives, and performance indicators, enabling us to monitor progress, adapt to changing circumstances, and ensure that our actions are guided by the principles of integrity, ethical leadership, and community needs.

As a municipality, our focus will remain on maintaining these principles and upholding the trust placed in us by our residents. I wish to extend my sincerest gratitude to all those who have contributed to the development of this IDP, including municipal staff, community leaders, and residents. Your input will ensure that we realize a George that we can all be proud of.

Let us work together to build a better future for our expanding George, where everyone can live, work, and play with dignity. I am confident that, through our collective efforts, we can create a municipality that is truly a place of opportunity, growth, and prosperity for all.

Executive Mayor: J von Brandis

Message by the Municipal Manager

It is with great pride that I present the Revised Integrated Development Plan (IDP) for the upcoming financial year. This document is a strategic guide that charts the path forward for our community, encapsulating our vision for a prosperous, sustainable future. As one of the leading municipalities in the Western Cape, and the second largest in the region, George is committed to providing high-quality services to all its residents.

This IDP has been shaped by comprehensive consultations with our residents, stakeholders, and various municipal departments. It captures the collective needs, aspirations, and priorities of our community, offering a clear roadmap for the year ahead.

Within this plan, you will find our focus on:

- Upgrading essential infrastructure, including roads, water systems, and sanitation.
- Fostering economic growth through support for small businesses and tourism development.
- Enhancing service delivery across all sectors.
- Ensuring the safety and well-being of our community.
- Promoting sustainability through green initiatives and climate change mitigation.

In line with these priorities, we are actively implementing several key projects, which we aim to complete during the current term of Council.

Our goal is to create a municipality where every resident enjoys an improved quality of life. I urge all residents to join hands with the municipality in working toward a brighter future for our community. Together, we can turn this vision into reality.

Municipal Manager: Godfrey Louw

Executive Summary

This document denotes the amendments made by George Municipality to the Integrated Development Plan (IDP) for the present planning and implementing period, considering the budget cycle. The document should be read in conjunction with the supporting documentation such as the municipal budget and associated sector plans.

The aim is to fully acknowledge the amendments and ensure that all resources are allocated to provide the best service to the community at large and provide access to the required basic services. It further aims to provide clarity on all the planned programmes, projects and initiatives that will serve the community.

The document comprises of the following Chapters:

Chapter 1: Governance: The chapter has been condensed to just cover the most crucial legal framework, national and local policy imperatives, and the high level IDP process.

Chapter 2: State of Greater George: This chapter provides a situational analysis of the existing trends and conditions in the Municipality, in accordance with the requirements of the Municipal Systems Act for developing an IDP, as well as the geographic location.

Chapter 3: Strategic Policy Context: The IDP requires alignment with other spheres of government at different stages during the process. The alignment is the instrument to synchronize and integrate the IDP process between different spheres of government. The alignment process must reveal how National and Provincial Government, and the District Municipality could tangibly assist this Municipality in achieving its developmental objectives.

Chapter 4: Sector Plan Implementation: The Municipality has a number of medium- and long-term sector plans that direct the implementation of the different functional areas. These plans form an integral part of the IDP. Although the time-periods for sector plans and the IDP differ (e.g., the mSDF has a 20-year horizon, IDP has a 5- year horizon and sector plan can be revised annually), the IDP and sector plans inform each other mutually. Like the IDP, sector plans are subject to periodic review. Alignment between sector plans and the IDP allows for more effective budgeting integration.

Chapter 5: Spatial Development Framework (SDF): The contribution of the SDF to the IDP Strategy is to address the spatial requirements of issues identified through the IDP process. The SDF is the spatial component of the IDP as required in terms of the Municipal Systems Act.

Chapter 6: Public Interest and expression of needs: The needs and priorities are then documented and considered as part of operational output, i.e. service delivery, to improve the quality of life of residents within the municipal area. This chapter focuses on the input received from the stakeholders during these engagements. The input, i.e., issues raised, were refined and prioritised as informants of the budget and development priorities of the Municipality.

Chapter 7: Financial Plan: The Municipality's financial plan integrates the financial relationships of various revenue and expenditure streams to give effect to the IDP. It provides guidance for the development of current budgets and assesses financial impacts on outer years' budgets by incorporating capital expenditure outcomes, operating expenditure trends, optimal asset management plans and the consequential impact on rates, tariffs, and other service charges.

Chapter 8: Organisational Scorecard (Performance Management): Regulation 7(1) of the Local Government: Municipal

Planning and Performance Management Regulations, 2001 states that “A Municipality’s Performance Management System (PMS) entails a framework that describes and represents how the municipality’s cycle and processes of performance planning, monitoring, measurement, review, reporting and improvement will be conducted, organized and managed, including determining the roles of the different role players.” This framework, inter alia, reflects the linkage between the IDP, Budget, Service Delivery Budget Implementation Plan (SDBIP) and individual and service provider performance.

CHAPTER 1: Governance

1.1 Integrated Development Planning

The South African municipalities are required under the Local Government: Municipal Systems Act, 2000 (Act No. 32 of 2000) (MSA) to develop a five-year Integrated Development Plan (IDP) to inform the municipal budget and guide all development within the municipal area. The IDP is regarded as the municipality's primary strategic plan and addresses both the organisation's urgent concerns for administration and the municipal area's most pressing needs for growth.

The planning process must offer a platform for identifying, analysing, and resolving the real issues that the citizens of George Municipality face since it serves as the principal planning tool that directs and informs the municipal budget. By identifying these problems in collaboration with communities, the municipality can offer practical and realistic solutions that can be budgeted for, implemented and monitored in a controlled environment. These issues may span across the whole municipality or may only affect specific communities. Therefore, it is essential that the IDP is created after the conclusion of a public participation process in which all relevant community stakeholders were consulted extensively. The plan is also developed in collaboration with the provincial and national governments, as well as the district municipality.

The improvement of basic municipal services and the expansion of job prospects for residents of the George Municipality are at the centre of the IDP. The IDP also emphasises strengthening and modernising municipal resources, business growth, and, most importantly, exploring innovative approaches to co-existing. This is particularly important in a constantly shifting environment.

1.2 Compilation and Legal Status of the Integrated Development Plan (IDP) 2024 – 2027

SECTION 35(1) OF THE MSA

An IDP is adopted by the council of a municipality:

- (a) is the principal strategic planning instrument which guides and informs all planning and development, and all decisions regarding planning, management and development, in the municipality;
- (b) binds the municipality in the exercise of its executive authority, except to the extent of any inconsistency between a municipality's integrated development plan and national or provincial legislation, in which case such legislation prevails; and
- (c) binds all other persons to the extent that those parts of the integrated development plan that impose duties or affect the rights of those persons have been passed as a by-law.

CHAPTER 5 AND SECTION 26 OF THE MSA

Core components of IDPs: An integrated development plan must reflect-

- (a) The municipal council's vision for the long-term development of the municipality with special emphasis on the
- (b) municipality's most critical development and internal transformation needs;
- (c) An assessment of the existing level of development in the municipality, which must include an identification of communities which do not have access to basic municipal services;
- (d) The council's development priorities and objectives for its elected term, including its local economic development
- (e) aims and its internal transformation needs;
- (f) The council's development strategies which must be aligned with any national and provincial sectoral plans and
- (g) planning requirements binding on the municipality in terms of legislation;
- (h) A spatial development framework which must include the provision of basic guidelines for a land-use management system for the municipality;
- (i) The council's operational strategies;
- (j) Applicable disaster management plans;
- (k) A financial plan, which must include a budget projection for at least the next three years; and
- (l) The key performance indicators and performance targets determined in terms of section 41.

1.3 Legislative and Guiding Framework

Municipalities function within an extensive legislative and policy framework that provides prescripts and guidelines for municipal actions per constitutional obligations. Furthermore, local government must be cognisant of and partake in a system of intergovernmental service delivery. In this regard, the George Municipality recognizes that to advance the local agenda, it's crucial for the municipal budget, programs, and projects to conform with overarching regulatory, developmental, and institutional policy directives.

1.4 Spatial Planning and Land Use Management Act, No. 16 of 2013 (SPLUMA)

This Act was promulgated on 5 August 2013 and has replaced several other Acts whereas it was deemed that various laws governing land use give rise to uncertainty about the status of municipal spatial planning and land use management systems and procedures and frustrates the achievement of cooperative governance and the promotion of public interest. It was resolved that informal and traditional land use development processes are poorly integrated into formal systems of spatial planning and land use management and that spatial planning is insufficiently underpinned and supported by infrastructural investment.

The objects of the Act as defined in Section 3 are to:

- provide for a uniform, effective and comprehensive system of spatial planning and land use management for the Republic;

- ensure that the system of spatial planning and land use management promotes social and economic inclusion;
- provide for development principles and norms and standards;
- provide for the sustainable and efficient use of land;
- provide for cooperative government and intergovernmental relations amongst the national, provincial and local spheres of government; and
- redress the imbalances of the past and to ensure that there is equity in the application of spatial development planning and land use management systems.

SPLUMA requires that planning be done in accordance with 5 overarching development principles as outlined in Section 7 of the Act. The IDP process is regarded as the main organising tool, encouraging municipalities to identify key delivery targets, such as land development objectives in identifying key service targets, taking development, policy and transformation objectives and imperatives into account. Municipalities are required to collaborate with other spheres of government, ensure transversal partnering between its internal departments and creating an opportunity for local communities to participate.

1.5 Constitution of the Republic of South Africa, 1996

The Constitution is a crucial component of the legal system of South Africa and of the legal-institutional framework within which development must take place. The Constitution of the Republic of South Africa, 1996 (Section 152) puts in place a vision for Developmental Local Government (DLG) and contains the following objectives:

- To provide democratic and accountable government for local communities.
- To ensure the provision of services to communities in a sustainable manner.
- To promote social and economic development.
- To promote a safe and healthy environment.
- To encourage the participation of communities and community organisations in the affairs of local government.

Section 153 (a) of Constitution of the Republic of South Africa, 1996 further instils the culture of ‘people and development centred’ municipalities by stipulating that – “A municipality must structure and manage its administration and budgeting and planning processes to give priority to the basic needs of the community, and to promote the social and economic development of the community.” Municipalities are mandated to ensure all citizens receive the services they need to satisfy their basic needs. Municipalities must also promote the Bill of Rights, which reflects the nation’s values regarding human dignity, equality and freedom, and uphold the principles enshrined in the Constitution of the Republic of South Africa, 1996.

Chapter 10 of the Constitution of the Republic of South Africa, 1996 encourages the creation of opportunities for public participation in public administration by identifying the basic values and principles governing public administration as follows:

“195. (1) Public administration must be governed by the democratic values and principles enshrined in the Constitution, including the following principles:

- (a) A high standard of professional ethics must be promoted and maintained.
- (b) Efficient, economic and effective use of resources must be promoted.
- (c) Public administration must be development oriented.
- (d) Services must be provided impartially, fairly, equitably and without bias.

- (e) People's needs must be responded to, and the public must be encouraged to participate in policymaking.
- (f) Public administration must be accountable.
- (g) Transparency must be fostered by providing the public with timely, accessible and accurate information.
- (h) Good human-resource management and career-development practices, to maximize human potential, must be cultivated.
- (i) Public administration must be broadly representative of the South African people, with employment and personnel management practices based on ability, objectivity, fairness, and the need to redress the imbalances of the past to achieve broad representation.

(2) The above principles apply to –

- (a) Administration in every sphere of government.
- (b) Organs of state; and
- (c) Public enterprises”.

The Constitution of the Republic of South Africa Act, 1996 provides a fundamental foundation for local government to create opportunities for local communities to participate meaningfully in matters affecting their lives. Therefore, municipalities can adopt policies that are in line with the Constitution of the Republic of South Africa, 1996.

1.6 White Paper on Transforming Public Service Delivery, 1997

As the sphere of government closest to the people, municipalities are the focal point of public service delivery. The White Paper on Transforming Public Service Delivery, 1997 (better known as the Batho Pele White Paper) promotes mechanisms to enable the state machinery to optimise the provision of services to all citizens. The Batho Pele White Paper spells out eight principles for transforming public service delivery and is explained in detail below.

- Consultation – citizens should be consulted about the level and quality of the public services they receive and, wherever possible, should be given a choice about the services that are offered.
- Service standards – citizens should be told what level and quality of public services they will receive so that they are aware of what to expect.
- Access – all citizens should have equal access to the services to which they are entitled.
- Courtesy – citizens should be treated with courtesy and consideration.
- Information – citizens should be given full, accurate information about the public services they are entitled to receive.
- Openness and transparency – citizens should be told how national and provincial departments are run, how much they cost, and who is in charge.
- Redress – if the promised standard of service is not delivered, citizens should be offered an apology, a full explanation and a speedy and effective remedy; and when complaints are made, citizens should receive a sympathetic, positive response.
- Value for money – public services should be provided economically and efficiently to give citizens the best possible value for money.

1.7 Local Government: White Paper on Local Government, 1998

The basis for DLG in South Africa is founded on provisions set out in the Local Government: White Paper on Local Government, 1998. According to the Local Government: White Paper on Local Government, 1998, developmental local governance should ultimately result in the following outcomes:

- The provision of household infrastructure and services
- The creation of liveable, integrated cities, towns and rural areas.
- The local economic development.
- Community empowerment and redistribution.

To achieve these outcomes, the Local Government: White Paper on Local Government, 1998 puts forward three interrelated approaches that can assist municipalities to fulfil their developmental mandate:

- Integrated development planning.
- Performance management.
- Working together with local citizens and partners.

Regarding public participation, the Local Government: White Paper on Local Government, 1998 stipulates that municipalities should encourage civil society participation through:

- Forums initiated within or outside municipalities to allow organised formations to initiate policies and/or influence policy formulation, as well as participate in monitoring and evaluation activities.
- Structured stakeholder participation in certain council committees.
- Participatory budgeting initiatives aimed at linking community priorities to capital investment programmes.
- Focus-group participatory action research to generate detailed information about a wide range of specific needs and values.
- Support for the organisational development of associations, in poor, marginalised areas where the skills and resources for participation may be less developed.

Integrated development planning is therefore central to realising the developmental local government vision. It is viewed as a mechanism to enable prioritisation and integration in municipal planning processes and to strengthen the links between the developmental (external) and institutional (internal) planning processes.

According to the Local Government: White Paper on Local Government, 1998, municipalities require active participation by citizens at four levels:

- As voters – to ensure maximum democratic accountability of the elected political leadership for the policies they are empowered to promote.
- As citizens who express, via different stakeholder associations, their views before, during and after the policy development process to ensure that policies reflect community preferences as far as possible.
- As consumers and end-users, who expect value-for-money, affordable services and courteous and responsive service.
- As organised partners involved in the mobilisation of resources for development via for-profit businesses, non- governmental organisations and community-based institutions.

1.8 Local Government: Municipal Structures Act, No. 117 of 1998

This Act gives district municipalities the responsibility for integrated development planning for the entire district municipality, including framework for IDPs for all local municipalities within areas. They therefore have a responsibility for inter-local co-ordination and for links with provincial and national departments. While each local municipality and the district municipality produce their own IDP and conduct their own participatory processes, the role of the district municipality is to ensure that there is a joint district strategy, and that the IDPs within the district are aligned with another and the district IDP.

The Local Government: Municipal Structures Act, No. 117 of 1998 is designed to regulate the internal systems, structures and office bearers of municipalities, and to provide for appropriate electoral systems. Chapter 4, Part 4 of the Act deals with the establishment, functions and powers of ward committees. The ward participatory system of municipal government allows for the establishment of ward committees to facilitate public participation in the matters of local government. Ward committees can also improve communication between the municipal council and local communities and play a role in identifying community needs and fine-tuning municipal programmes to accommodate local circumstances.

1.9 Local Government: Municipal Systems Act, No. 32 of 2000

The Local Government: Municipal Systems Act, No. 32 of 2000 was published to establish a framework for planning, performance management systems, effective use of resources and organisational change. It provides for the core principles, mechanisms and processes that are necessary to work in partnership with the community.

Chapter 4 of the Local Government: Municipal Systems Act, No. 32 of 2000 deals with the development of a culture of community (public) participation, mechanisms, processes and procedures for community participation, communication of information concerning community participation, public notice of council meetings, and communication between council and the local community. These mechanisms for public participation must also be appropriate for the preparation, implementation and review of the IDP.

Section 25 of the Local Government: Municipal Systems Act, No. 32 of 2000 stipulates the need for each municipal council to adopt an IDP within a prescribed period after the start of its elected term. Furthermore, Section 26(e) of the Local Government: Municipal Systems Act, No. 32 of 2000 identifies the municipal spatial development framework as a core component of the municipal IDP along with the council's development strategies and sector plans. The municipal spatial development framework therefore forms part of the Municipality's duly adopted IDP and should be incorporated in the process plan.

1.10 Local Government: Municipal Planning and Performance Management Regulations, 2001

The Local Government: Municipal Planning and Performance Management Regulations, 2001 seeks to enhance the implementation of performance management obligations imposed by legislation and cultivate uniformity in the application of performance management within the local sphere of government. The Regulations outline the details to be contained in the municipalities' IDPs, as well as the process of amendment. They also provide the nature of performance management systems, their adoption, processes for the setting of performance targets, monitoring, measurement, review and the internal auditing of performance measurements. The Regulations conclude with a section on community participation in respect of integrated development planning and performance management.

1.11 Local Government: Municipal Finance Management Act, No. 56 of 2003

This Act aims to modernise budget and financial management practices by placing local government finances on a sustainable

footing. It serves to maximise the capacity of municipalities to deliver services to all their residents, customers, users and investors. One of the most significant reforms is the new budget process and its link to the IDP.

Section 21 of the Local Government: Municipal Finance Management Act 56 of 2003 emphasises the importance of a platform for public participation in the IDP and budget process. This process must be carried out as a single and integrated process, as opposed to a separate IDP process followed by a budget process.

Furthermore, Section 130 of the Local Government: Municipal Finance Management Act, No. 56 of 2003 stipulates *inter alia*; that the meetings of a municipal council at which a report is to be discussed or at which decisions concerning an annual report are to be taken, must be open to the public.

1.12 Local Government: Municipal Property Rates Act, No. 6 of 2004

The Local Government: Municipal Property Rates Act, No. 6 of 2004 seeks to regulate the powers of municipalities to levy rates on property. Rates represent a critical source of own revenue for municipalities to achieve their constitutional development objectives.

1.13 Intergovernmental Relations Framework Act, No. 13 of 2005 (IRFA)

The Intergovernmental Relations Framework Act regulates and facilitates the coordination and implementation of policy and legislation between the organs of state within the three spheres of government in South Africa. It promotes coordination and collaboration amongst the three spheres of government in planning and implementation.

The needs of community members and public, private, and community organisations, in addition to a leadership agenda as outlined in national and provincial policy documents, are taken into consideration while developing the IDP. It guides and informs various facets of the municipality's work, such as the political and administrative structure of the municipality, the municipal budget, the sector plans and service delivery and budget implementation plan of various municipal services, and the management of performance of the municipality.

The IDP 2022 – 2027 outlines the following chapters:

- Chapter 1: Governance and Institutional Arrangements
- Chapter 2: Situational Analysis of the State of Greater George.
- Chapter 3: The Strategic Policy Context.
- Chapter 4: Sector Plan Implementation.
- Chapter 5: Spatial Development Framework.
- Chapter 6: Ward Priorities (Public Interest).
- Chapter 7: Financial Plan
- Chapter 8: Organisational Scorecard

1.14 Relationship between the IDP, Budget, Performance management and Risk Management

The IDP Process, together with the performance management process, should be seamlessly integrated, where the IDP ensures that the planning stage for performance management occurs, and performance management fulfils the implementation, monitoring and evaluation of the IDP process. This is prescribed according to the Performance Management Guide for Municipalities, DPLG, 2001.

The Budget's purpose is to allocate funds to the objectives in the IDP, and it is monitored by the Service Delivery Budget Implementation Plan (SDBIP). Therefore, the municipality's strategic direction is provided by the IDP, and its implementation should be supported by the budget.

According to section 62 of the Local Government: Municipal Finance Management Act, 2003 (Act No. 56 of 2003) (MFMA), risk management is one of management's primary duties and is an essential component of a municipality's internal operations. It is a systematic method to detect, assess, and deal with risks continually before they have a detrimental influence on the George Municipality's ability to provide services. The institution may reasonably be certain that it will be successful in reaching its aims and objectives due to risk management.

1.15 Relationship between the IDP and One Plan

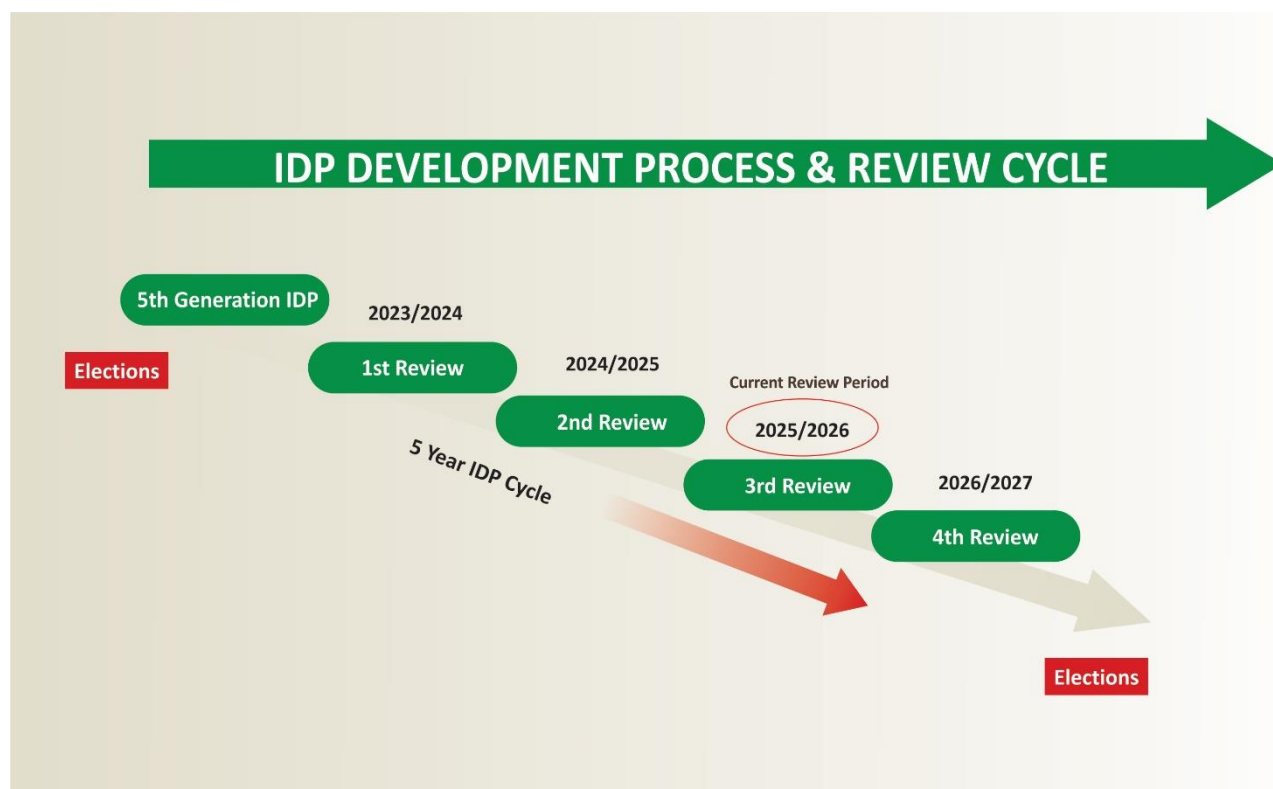

The One Plan does not replace the Integrated Development Plan (IDP) of the municipality as the “single, inclusive and strategic plan for the development of the municipality”. It is envisaged that the One Plan will strengthen and enhance the IDP and other plans of the municipalities. It is foreseen to provide greater certainty and direction for the IDP. During the development of the One Plan, the IDP informed the One Plan. However, after approval of the One Plan, the IDP will be directed by the strategies and priorities outlined in the One Plan. In this regard, the IDP will be the vehicle through which implementation of the One Plan will happen at the local government level.

1.16 The IDP Planning Process (five-year cycle)

According to the MSA, every new council that comes into office after the local government elections must prepare its IDP that will guide them for the five years that they are in office. The IDP is, therefore, linked to the five-year term of office of Councillors. This does, however, not restrict all proposals in the IDP to five years. The strategic goals that are part of the municipality's strategy all have a longer than five-year horizon, similar to the Spatial Development Framework (SDF) of the municipality.

A clear distinction must also be made between the main IDP which is compiled every five years (or if a new council comes into power within the five-year period and does not accept the previous council's IDP) and the annual review of the IDP. The annual review is not a replacement for the five-year IDP, and its purpose is not to interfere with the long-term strategic orientation of the municipality. The annual review reflects and reports on progress made concerning the five-year strategy (and strategic goals) and proposes adjustments to the strategy, if necessary, because of changing internal and external circumstances that impact the appropriateness of the IDP.

Figure 1: Five- Year IDP Development and review cycle

1.17 Political and Administrative Collaboration

Municipal leadership and management collaborate closely for sustainable municipal management. Policy direction ultimately rests with democratically elected political leadership. The administration makes recommendations and implements policies into place.

Best practise demonstrates that establishing meaningful partnerships with local communities, where local communities assume full responsibility for the development of their neighbourhoods, is the only method to carry out sustainable urban management. George Municipality is dedicated to ensuring that our poorest neighbourhoods experience true social and economic development via appropriate community engagement and responsibility. The legal affiliation of communities with the municipality is not well understood. Local communities, however, cannot only act as critics or disinterested observers given that this is the situation, communities must actively participate in the development and execution of initiatives and programmes in their neighbourhoods.

Traditional strategic planning procedures meant to direct development and management decisions require a great deal of time. These procedures, sadly, do not take into account the "now" or the requirement to inform choices made right now. The "now" has grown to be crucial for towns. It matters every month. We think that because of how big our problems are, we risk losing a lot of what makes a place unique and being ill-equipped to handle issues in the future if we don't quickly come up with an integrated solution that everyone can agree on. We frequently observe that delay or even bad decision-making is justified by the statement that a plan is "under preparation." The strategy also seems to disregard local knowledge base, or what individuals learn by dealing with service-related problems on a daily basis. In order to debate strategic concerns and the best ways to address them, we have established frequent, informal but organised engagements between the MayCo and Director's Forum.

These planning techniques fill the gap between the technical needs of developing a strategy and the demand for strategic frameworks to be readily available to cope with quick decision-making. Through intensive, organised information-sharing and planning workshops, this procedure aims to establish a starting position on how to guide the growth and administration of the municipality. A first plan is drafted, and provisions are created for influencing today's decisions and the character of future work in a way that supports the strategy. The plan is expanded upon in further technical work to serve as the broad strategic framework.

Key tools to assist with are legislation, regulation, policy, institutional and fiscal measures, management information and asset management.

1.18 Municipal policies and service-delivery improvement plans

The municipality has the following policies, service-delivery improvement plans and systems to support the workforce in delivering on the strategic objectives:

It is the Council's intention to develop a schedule of all policies and by-laws that will indicate a rotation plan for reviewing all policies and by-laws. This process will assist the municipality to be compliant, developmental, and innovative in conducting its business. The systems are continuously updated to ensure that they support the administration as well as the delivery of services to the public.

1.19 Municipal Council

The Council performs both legislative and executive functions. It focuses on legislative, oversight and participatory roles, and has delegated its executive function to the Executive Mayor and the Mayoral Committee. Its primary role is to debate issues publicly as well as facilitate political debates and discussions. Apart from their functions as policymakers, Councillors are also actively involved with community work and in the various social programmes in the municipal area.

George Municipality is represented by 55 councillors of whom 28 were elected directly as ward councillors. The rest of the councillors were elected based on the proportion of votes cast for the different political parties. The political composition of the Council is as follows:

Table 1: Council Political Representation

Political Party	Number of Councillors
Democratic Alliance (DA)	27
African National Congress (ANC)	10
GOOD	3
Plaaslike Bersorgde Inwoners (PBI)	5
Freedom Front Plus (VF+)	4
Economic Freedom Fighters (EFF)	2
African Christian Democratic Party (ACDP)	1
Patriotic Alliance (PA)	3
Total	55

Below is a table that categorises the Councillors within their respective political parties and wards.

1.19.1 Executive Mayor and Mayoral Committee (MayCo)

The Council performs both legislative and executive functions. It focuses on legislative, oversight and participatory roles, and has delegated its executive function to the Executive Mayor and the Mayoral Committee. The council's role is to debate issues publicly and to facilitate political debate and discussion. The council plays a very active role in the operations of the Municipality. Apart from their functions as decision-makers, councillors are also actively involved in community work and the various social programmes in the municipal area.

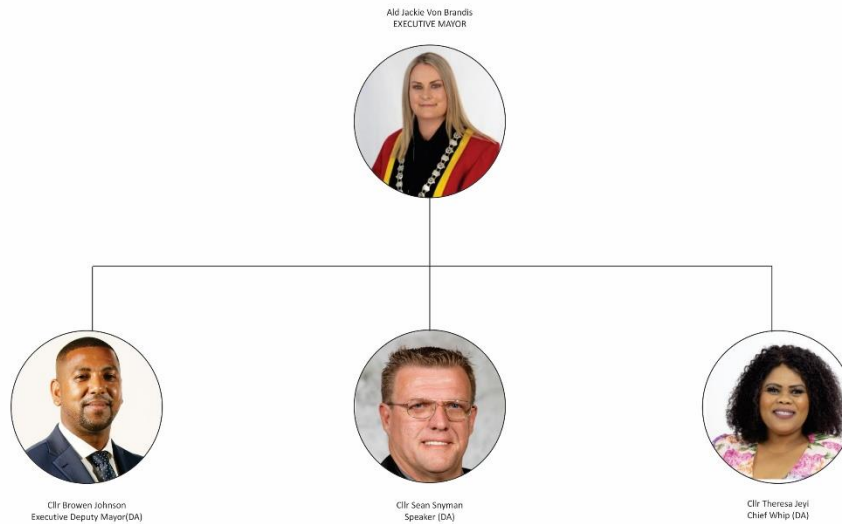

The Executive Mayor of the Municipality, Alderman L Van Wyk, assisted by the Executive Mayoral Committee, heads the executive arm of the Municipality. The Executive Mayor is at the centre of the system of governance since executive powers are vested in him to manage the day-to-day affairs. This means that he has an overarching strategic and political responsibility. The key element of the executive model is that executive power is vested in the Executive Mayor, delegated by the Council, and as well as the powers assigned by legislation. Although accountable for the strategic direction and performance of the Municipality, the Executive Mayor operates in concert with the Mayoral Committee.

1.19.2 The Administration

The Municipal Manager is the Chief Accounting Officer of the Municipality. The Municipal Manager is the head of the administration and primarily must serve as the chief custodian of service delivery. The Municipal Manager is assisted by the Management Team that reports directly to the Municipal Manager. The structure of the Management Team is outlined in the diagram below:

Figure 5: Municipal Management Team

The George Municipality currently employs 1261 (excluding non-permanent positions and directors) officials, who individually and collectively contribute to the achievement of the Municipality's objectives. The primary objective of Human Resources Management is to render an innovative Human Resources Service that enhances both skills development and administrative function. The approved staff establishment/ organogram for the Municipality has 1492 current budgeted positions for the 2023/2024 financial year. The actual positions filled are indicated in the tables below by post level. Currently, 224 positions are vacant.

The Municipality is committed to developing the skills of the human resource capacity and therefore prepares a Workplace Skills Plan annually. The Municipality is actively performing skills audits and completing individual personal development plans for all directorates. Training and skills development gaps are identified, and the training plans will focus on the needs identified. The Municipality has implemented a performance management system for all staff and the performance plans is aligned with the strategic objectives and the TASK job functions.

The draft 5th Generation IDP 2022 – 2027 and draft MTREF 2022/23 – 2024/25 for George Municipality was submitted to the Council on 27 March 2025 for consideration and approval to be released for public comments. The IDP and Budget public participation process within the Municipal area commenced on 08 April to 08 May 2025. Inputs and comments on the draft 5th Generation IDP 2022 – 2027 and draft MTREF 2025/26 – 2026/27 will be compiled and distributed to the directorates for consideration in finalizing the IDP and Budget.
May – June 2025	<ul style="list-style-type: none"> Adoption of the final IDP and Budget, Tariffs and Budget related policies. Submit adopted IDP to Garden Route District Municipality, Provincial Government and National Treasury. Approval of SDBIP by the Executive Mayor within 28 days after adoption of the IDP and Budget.

1.20 Corporate Governance

Corporate Governance is the set of processes, practices, policies, laws, and stakeholders affecting the way an institution is directed, administered, and controlled. Corporate governance also encompasses the relationships among the many stakeholders

involved and the goals for which the institution is governed.

1.21 Risk Management

Section 62 of the Local Government: Municipal Finance Management Act, 2003 (Act No. 56 of 2003) (MFMA), states that the Accounting Officer should take all reasonable steps to ensure that the municipality has and maintains effective, efficient, and transparent systems of financial and risk management and internal control, as well as the effective, efficient and economical use of the resources of the municipality.

The Local Government: Municipal Systems Act (Act 32 of 2000) (Systems Act) enables local government to establish a simple framework for core processes of planning, performance management, resource mobilisation and organisational change which underpin the notion of developmental local government and provides for legal matters pertaining to local government.

Other legislation such as the Local Government: Municipal Structures Act (Act 117 of 1998) (Structures Act) and the Municipal Finance Management Act (Act 56 of 2003) (MFMA) establish frameworks and legislation to regulate the internal systems and structures as well as to secure sound and sustainable management of the financial affairs of municipalities.

Section 154 of the Constitution obliges national and provincial government to partake in co-operative government and to support and strengthen the capacities of municipalities to manage their own affairs, exercise their powers and perform their functions.

This principle is further outlined in the Systems Act in Section 3 (2), which states: National and provincial spheres of government must within the constitutional system of cooperative government envisaged in Section 41 of the Constitution, exercise their executive and legislative authority in a manner that does not compromise or impede a municipality's ability or right to exercise its executive and legislative authority.

The above-mentioned legislation clearly places the onus of service delivery on municipalities, which, through their leadership, are responsible for the promotion of the social and economic development of the community.

The role of local government leadership and the responsibility placed upon these leaders necessitates ethical values of responsibility, accountability, fairness and transparency as underpinning governance principles.

George Municipality strives to embed the principles embodied by the King IV Report on Corporate Governance for South Africa, 2016 (herein referred to as “King IV Report”), into its day-to-day functioning. King IV sets out the philosophy, principles, practices and outcomes which serve as the benchmark for corporate governance in South Africa.

1.21.1 Assessment of Risks

While conducting our day-to-day business operations, we are exposed to a variety of risks. These risks include operational and other risks that are material and require comprehensive controls and ongoing oversight.

To ensure business success we have adopted an enterprise-wide integrated approach to the management of risks. By embedding the risk management process into key business processes such as planning, operations and new projects, we are better equipped to identify events affecting our objectives and to manage risks in ways that are consistent with the approved risk appetite. To further implement the enterprise-wide approach, we have taken several steps to reinforce a culture of disciplined risk-taking.

The risks were assessed to ensure that the municipality can appropriately respond to their impact on municipal service delivery and achievement of municipal strategic and operational objectives, taking into account the changing internal and external

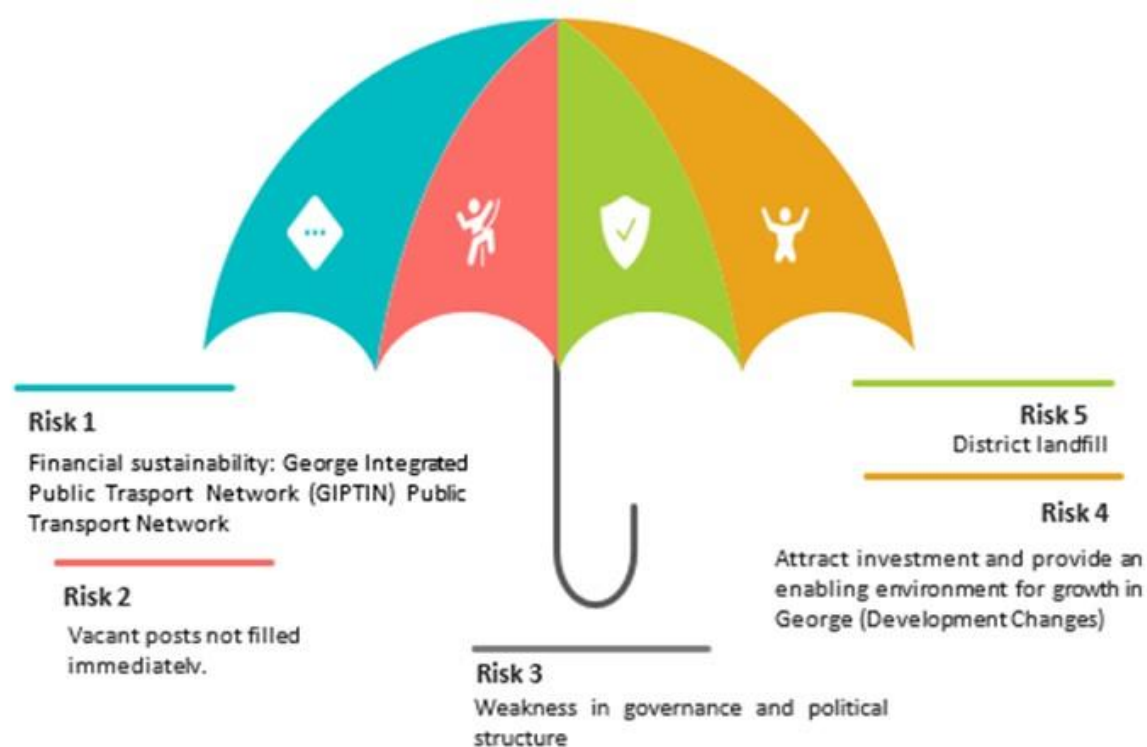

factors.

The following rating table categorises the various levels of inherent risk.

Table 5: Impact and Likelihood Rating Scale

Impact and Likelihood Rating		
Likelihood Grading		
1	Rare	The risk is conceivable but is only likely to occur in extreme circumstances.
2	Unlikely	The risk occurs infrequently and is unlikely to occur within the next 3 years.
3	Moderate / Possible	There is an above average chance that the risk will occur at least once in the next 3 years.
4	Likely	The risk could easily occur and is likely to occur at least once within the next 12 months.
5	Common / Certain	The risk is already occurring or is likely to occur more than once within the next 12 months.
Impact Grading		
1	Insignificant / Negligible	Negative outcomes or missed opportunities that are likely to have a negligible impact on the ability to meet objectives.
2	Minor	Negative outcomes or missed opportunities that are likely to have a relatively low impact on the ability to meet objectives.
3	Moderate	Negative outcomes or missed opportunities that are likely to have a relatively moderate impact on the ability to meet objectives.
4	Major	Negative outcomes or missed opportunities that are likely to have a relatively substantial impact on the ability to meet objectives.
5	Critical / Extreme	Negative outcomes or missed opportunities that are of critical importance to the achievement of the objectives.

The **top strategic** risks identified include:

The municipal risks have been linked to the Integrated Development Plan (IDP) through linkages to the Strategic Objectives Areas. The table below depicts the summary output of the top risk analysis in terms of which directorate risks included in the risk register were associated to broader risk themes. Top risks and risk treatment plans are assessed and updated regularly.

Table 6: Table 1: Risk and IDP Alignment

Strategic Risk Themes						
Risk Item	Risk Theme	Risk Background	Strategic Focus Areas	Inherent Likelihood Ratings	Inherent Impact Ratings	Directorate
1	Financial sustainability: George Integrated Public Transport Network (GIPTN) - Integrated Public Transport Network	Successful rollout of GIPTN to meet stakeholder needs across the entire municipal area and to fully establish, adequately fund and to effectively, efficiently and economically operate the service in accordance with contractual agreements and applicable laws and regulations	Develop and Grow George	5	5	Civil Engineering Services
2	Human capital (vacant posts not filled timely)	Challenges to fill vacant posts timely due to <i>inter alia</i> challenges to attract suitably qualified and experienced applicants	Good Governance and Human Capital	5	5	All Directorates
3	Weaknesses in governance and political instability	Governance structures and processes are designed to ensure accountability, transparency, responsiveness, rule of law, stability, equity, inclusiveness and empowerment	Good Governance and Human Capital	5	4	All Directorates
4	Attract investment and provide an enabling environment for growth in George (Development Charges)	To provide an enabling environment for growth in George requires <i>inter alia</i> affordable and sustainable tariffs for businesses and communities which will attract investment in George.	Develop and Grow George	5	4	Civil Engineering Services Electro-technical Services Community Services Human Settlements, Planning and Development Financial Services
5	District Landfill development	The Garden Route District Municipality is co-ordinating the development of the new District Landfill Site. Refuse is currently disposed of at the PetroSA Landfill Site, which is a temporary solution until the completion of the District Landfill Site.	Safe, Clean and Green	5	4	Community Services
6	Climate change resilience and adaptation	Resilience and adaptation measures are necessary to reduce the contributing factors to climate change, and to reduce the impact of climate change within George. Impacts of climate change include <i>inter alia</i> severe weather conditions such as flash flooding, drought and fires	Safe, Clean and Green	4	5	All Directorates
7	Maintenance and upgrade of infrastructure	The pro-active planned maintenance of infrastructure and infrastructure upgrades reduces the negative impact on service delivery resulting from breakages	Develop and Grow George	5	4	All Directorates
8	Load-shedding resilience and mitigation	Loadshedding negatively impacts service delivery and increases the risk of <i>inter alia</i> , damage to municipal infrastructure as well as negatively impacts the	Affordable Quality Services	5	4	Electro-technical Services and Civil Engineering

Strategic Risk Themes						
Risk Item	Risk Theme	Risk Background	Strategic Focus Areas	Inherent Likelihood Ratings	Inherent Impact Ratings	Directorate
		operational effectiveness of water and wastewater treatment.				Services
9	Records and information management	George Municipality keeps information resources to support its operations, as well as to fulfil legal and other obligations. To support continuing service delivery and provide the necessary accountability, information and records must be maintained, authentic, reliable and usable. Sound records and information management is fundamental for good governance and effective and efficient administration. It forms a basis for formulating Municipal policy, managing resources and delivering services to the public. Sound records management also provides a basis for accountability and protecting the rights of individuals	Good Governance and Human Capital	5	4	All Directorates
10	Water security and water management	Water is a valuable resource which is impacted by increased water demand tied to population growth and climate change. Water security is critical to achieve sustainable growth	Affordable Quality Services	4	5	Civil Engineering Services
11	Electricity, energy resilience and mitigation	There is an increasing trend of consumers defecting from the electricity supply grid by installing alternative energy sources (such as solar panels), mainly attributed to loadshedding and unsustainable electricity price hikes by Eskom. The continued trend of customers defaulting from the electricity grid will negatively impact the financial sustainability in the provision of electricity to remaining consumers on the municipal electricity grid.	Affordable Quality Services	4	4	Electro-technical Services and Civil Engineering Services
12	Information and communication technology (ICT)	George Municipality has embarked on developing a “Smart City” and continues to invest in ICT to improve operational efficiency and effectiveness. The reliance on ICT has increased together with the importance of ICT measures and safeguards to protect the integrity of data processed and stored by information systems	Good Governance and Human Capital	4	4	All Directorates

1.22 Anti – Corruption and Anti – Fraud

SECTION 83(C) OF THE MSA

Refers to the implementation of effective bidding structures to minimise the possibility of fraud and corruption.

SECTION 115(1) OF THE MFMA

States that the accounting officer must take reasonable steps to ensure that mechanisms and separation of duties in a supply chain management system are in place to minimise the likelihood of corruption and fraud

SECTION 62(1) OF THE MFMA

States the following “the accounting officer of a municipality is responsible for managing the financial administration of the municipality, and must for this purpose take all reasonable steps to ensure: –

- (a) That the resources of the municipality are used affectively, efficiently and economically;
- (b) That the full and proper records of the financial affairs are kept in accordance with any prescribed norms and standards;
- (c) That the municipality has and maintains effective, efficient and transparent systems –
 - (i) Of financial and risk management and internal control;
 - (ii) Of internal audit operating in accordance with any prescribed norms and standards;
- (d) That unauthorised, irregular or fruitless and wasteful expenditure and other losses are prevented; and
- (e) That disciplinary or, when appropriate, criminal proceedings are instituted against any official of the municipality who has allegedly committed an act of financial or an offence in terms of Chapter 15.”

Management and Council have taken ownership of combatting fraud and corruption throughout the Municipality. Council supports and fosters a zero-tolerance approach for the commission or concealment of fraudulent or illegal acts. Council adopted the Anti-fraud and Anti-corruption Framework, which includes an Anti-fraud and Anti-corruption Policy, Strategy and Implementation Plan. The Framework is reviewed annually, and any recommended amendments are workshopped with Council and employees and approved by Council.

The objectives of the Anti-fraud and Anti-corruption Policy is to develop and foster a climate within the George Municipality where all staff strives for the ultimate eradication of fraud, corruption, theft and maladministration by application of the full spectrum of both proactive and reactive measures at their disposal, and to gain the support of the public in this endeavor.

The Policy communicates George Municipality’s commitment to eliminate fraud and corruption and depict the stance of the Municipality to fraud, as well as reinforcing existing regulations aimed at preventing, reacting to, and reducing the impact of fraud, corruption, theft and maladministration where these dishonest acts subsist. Allegations of such acts are investigated and pursued to their logical conclusion, including legal action, criminal prosecution, and disciplinary action where warranted. The George Municipality takes appropriate legal recourse to recover losses or damages arising from fraud, corruption, theft or maladministration.

The structural strategies according to the Anti-fraud and Anti-corruption Strategy and Implementation Plan include the establishment of an Anti-fraud and Anti-corruption Committee to oversee the approach of the Municipality to fraud prevention, fraud detection strategies and response to fraud and corruption incidents reported by employees or other external parties. The

Audit Committee and Section 80 Finance Committee fulfil the role of the Anti-fraud and Anti-corruption Committee. The Municipality performs fraud risk identifications and assessments to manage and reduce the susceptibility of the Municipality to fraud risk. Furthermore, ongoing fraud and corruption prevention activities are performed, and appropriate preventative, detective and corrective controls are applied. These include the existing controls and checking mechanisms as prescribed in existing policies, procedures and other relevant prescripts to the activities of the Municipality, and systems of internal control.

Processes put in place as a deterrent to mitigate key fraud risk areas includes, but are not limited to, division of duties, internal audit review of processes and adherence thereto, an Audit Committee that excludes politicians and officials as voting members, condemnation by the Mayor and Municipal Manager of corrupt practices, and involvement of police as soon as grounds for suspicion become evident.

The Municipality continues to roll-out awareness campaigns and to raise the level of fraud awareness among employees and other stakeholders. Workshops are held annually with Council and employees to inform them of the Policy and to enhance awareness within the Municipality.

Fraud and corruption prevention media campaigns were rolled-out during the year to increase fraud awareness of Council, employees, the public and other stakeholders. Council adopted the Whistleblowing Policy in 2015. The Policy is reviewed annually and any recommended amendments are workshopped with Council and employees and approved by Council. The Whistle-blower Policy is aligned to relevant legislation, regulations and leading practices.

The fraud hotline or tip-off line is also fully functional and managed by an independent service provider. A toll-free number and e-mail service are available to members of the public to report any suspected fraudulent or corrupt activities.

The Protected Disclosures Act came into effect on 16 February 2001. To remain in compliance with the Act, George Municipality strives to create a culture which will facilitate the disclosure of information by staff relating to criminal and other irregular conduct in the workplace in a responsible manner by providing clear guidelines for the disclosure of such information and protection against reprisals because of such disclosure. The Municipality also promotes the eradication of criminal and other irregular conduct within.

The Whistleblowing Policy is intended to encourage and enable staff to raise concerns rather than overlooking a problem or blowing the whistle to inappropriate channels. The Policy aims to:

1. provide avenues for staff to raise concerns and receive feedback on any action taken;
2. inform staff on how to take the matter further if they are dissatisfied with the response; and
3. reassure staff that they will be protected from reprisals or victimisation for whistleblowing in good faith.

The Fraud Hotline was effective throughout the year. Disclosures can be made via several methods such as phone (0860 044 044) and e-mail (fraud@george.gov.za). Whistle blowers can also report to the Municipal Manager, Internal Audit section, Internal Investigator, or the Chief Risk Officer.

1.23 Audit Committee (AC)

The Municipal Audit and Performance Audit Committee (APAC) (refer to Table below for members of the Audit Committee), appointed in terms of section 166 of the MFMA, has also been appointed as the Performance Audit Committee. Section 166(2) of the MFMA states that an audit committee is an independent advisory body that must:

- (a) advise the municipal council, the political office-bearers, the accounting officer, and the management staff

of the municipality, on matters relating to: –

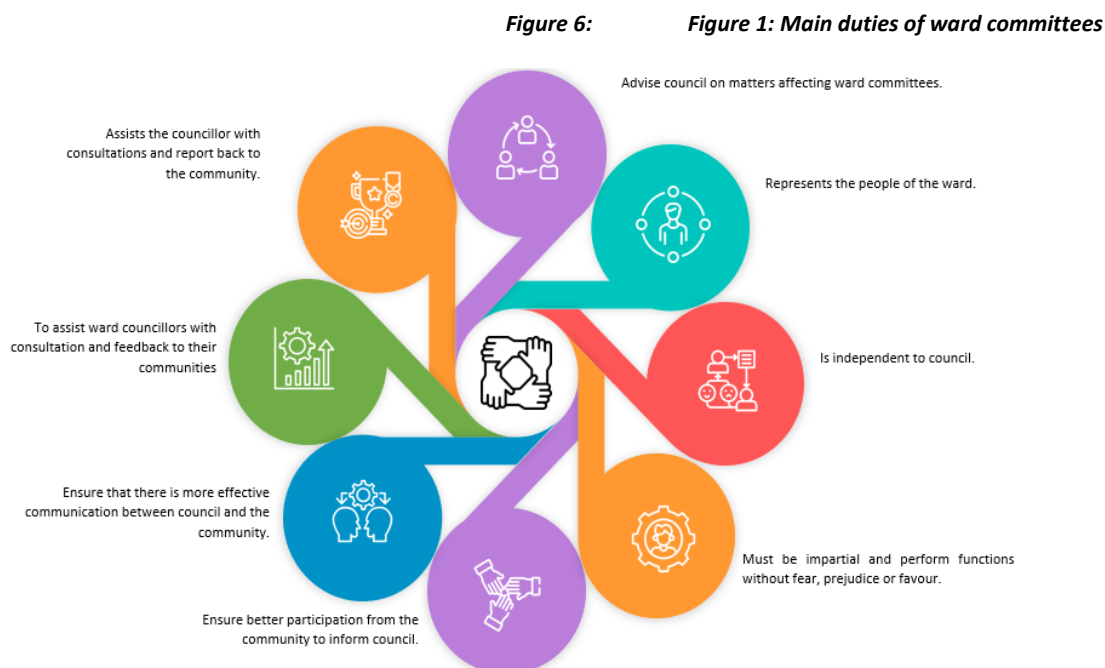

- internal financial control and internal audit;
- risk management;
- accounting policies;
- the adequacy, reliability and accuracy of financial reporting information;
- performance management;
- effective governance;
- compliance with this Act, the annual Division of Revenue Act, 2013 (Act No. 2 of 2013) and any other applicable legislation;
- performance evaluation; and
- any other issues referred to it by the municipality.

Table 7: Members of the Audit Committee

Name of representative	Capacity
Mr Ewayne Le Roux	Chairperson
Mr George Mellett	Member
Mr Kurwin Olivier	Member
Ms Busiswe Gulwa	Member

1.24 Ward Committees

George Municipality has a Ward Committee system in place, which plays a crucial role in achieving the aims of local governance and democracy, as mentioned in the Constitution of 1996. A Ward Committee is independent of the council and not politically aligned. The figure below depicts the main duties of the Ward Committees.

1.25 Intergovernmental Relations

The municipality fosters relations with other spheres of government and participates in various intergovernmental activities to

promote a closer working relationship between the various spheres of government. These relationships assist in enhancing Government's services to the communities of George and promotes a more efficient use of resources and sharing of knowledge. The municipality faces severe constraints especially in terms of funding and capacity and therefore effective service delivery is promoted through resources and capacity leveraged from partners.

1.25.1 Transversal Partnering

These partnerships exist between line function departments within the Municipality. The prevailing partnerships include:

- a. IDP and Budget Steering Committee.
- b. Project Committees in respect of drafting and amendment of the municipal SDF; restructuring and urban upgrade projects; and GIPTN.

1.25.2 Intergovernmental Partnering

The municipality partners with other spheres of government in an ongoing effort to leverage financing, mandates and facilitate decision making. The existing partnerships include:

- a. Housing Department – partnerships with the Western Cape Provincial Government and National Housing authorities to collaborate on delivery and funding for subsidised housing projects and development of restructuring zones aimed at spearheading spatial transformation.
- b. Civil Engineering Services has ongoing partnerships with state and provincial authorities in efforts to leverage funding for upgrade of infrastructure to sustain economic growth.
- c. Protection Services: The development and roll-out of the George Integrated Public Transport Network is a result of a continuing partnership with the Western Cape Provincial Government, with significant funding from national government.
- d. Local Economic Development actively participates in collaboration with the National Department of Rural Development in an initiative to establish Farmer Production Support Units within the municipal area, which projects are funded by the National Department.
- e. Information, Communication & Technology partners with the Garden Route District Municipality & Western Cape Provincial Government in collaborating on implementing good governance in as well as knowledge sharing.
- f. Planning and Development actively partners with the DEA&DP in the process of development of the Municipal Spatial Development Framework and Capital Expenditure Framework saves cost and contributes to the credibility of these frameworks.

1.25.3 Cross-Boundary Partnering

Partnerships with other municipalities in the Garden Route District facilitates decision making and serves as a valuable exchange of knowledge and learning best practices. Prevailing partnerships include:

- Participation in IDP processes of neighbouring municipalities.
- Active participation in Intergovernmental Steering Committees formed in lieu of drafting MSDFs for neighbouring municipalities.
- Memorandum of agreement with four other municipalities whereby a Joint Municipal Tribunal has been established to leverage decision making capacity and support compliance with SPLUMA and the Land Use Planning By-law. This enables the municipality to leverage from the knowledge and experience of a pool of skilled planners across parts of the district while saving costs that would otherwise have been spent on external parties.

The demonstration of the importance of partnerships for the Municipality is illustrated in the table below.

Table 9: Key Stakeholders

Name of Partner	Purpose of MOU / MOA
Garden Route Skills Mecca	<p>Continue and accelerate collaboration and cooperation among all district skills development role players. Ensure that skills development leverages digital infrastructure as far as possible to ensure learning and processes methods are and remain cutting edge.</p> <p>As far as possible link skills development to investment and economic development opportunities to the advancement for all.</p> <p>Ensure that all skills development processes in the Garden Route always proactively considers renewable energy. Engage with all willing partners, in particular the SETAs and the National Skills Fund, to explore the development and implementation of projects across the district.</p>
Joint Municipal Planning Tribunal for the Eden Region, known as the Eden Joint Municipal Planning Tribunal	<p>It includes an agreement between the Municipalities of George, Hessequa, Mossel Bay, Oudtshoorn and Kannaland as provided for in terms of section 34 (1) of SPLUMA to establish a Tribunal that will jointly consider and decide the land development and land use applications, submitted to the respective Municipalities. The purpose of the Eden JMPT is to provide a pool of suitably qualified planners to serve as a credible independent and professional authority to</p>

Name of Partner	Purpose of MOU / MOA
	consider and decide the land development and land use applications. The term for this Tribunal is 5 years and is reviewed annually.
Informal Settlement Support Program	<p>There is no MOU/MOA for this forum. The forum is a collaborative platform established where all municipalities and various other departments share information and best practices with regards to the upgrading of informal settlements.</p> <p>The ISSP Forum presents the perfect opportunity to reflect on how municipalities illustrate collaborative support for the roll-out of initiatives to better the lives of people living in informal settlements. The ISSP Forum inspires municipalities to do what they can to make the shift anticipated in the Informal Settlement support Programme (ISSP).</p>
Task Job Evaluation Memorandum of Agreement between Municipalities in the Eden/ Garden Route/Central Karoo District Region	<p>To implement the Task Job Evaluation System within the Local Government Sector to achieve uniform norms and standards in the description of similar jobs and their grading, and to underpin job comparison.</p> <p>To provide for the structures, guidelines and institutional arrangements and procedures for job evaluation.</p>
Provincial Library Service	<p>WHEREAS the Department has received funding from the National Government of South Africa for the 2022/2023 financial year to assist B municipalities to deliver on the unfunded mandate of the provision of library services in their respective municipal areas; AND WHEREAS, the Parties agree to the Department allocating to the Beneficiary a payment in the sum of R11 921 000 (Eleven Million, Nine Hundred and Twenty-One Thousand Rand) (hereafter referred to as "the Funds") as a contribution towards partially addressing the unfunded mandate, for staffing, the new library building project, instalment of a book detection system and / or other specified project costs of the public libraries in the Municipality ("the Project") for the 2022/2023 financial year, as set out in the Final Allocation Letter and Business Plan annexed hereto marked "A" and "B". MTEF amounts of R9 148 000 and R9 559 000 in 2023/2024 and 2024/2025 have been Gazetted AND WHEREAS in the case of multi-year funding, funding for subsequent financial years will be subject to the allocations made by the National Government, the Provincial Executive, departmental budget allocations made by the Provincial Parliament, the departmental performance management processes and the departmental Allocation Committee, together with the conclusion of a further agreement between the Parties in respect of such further funding.</p>
George Library / Unisa Partnership:	<p>Venture in annual event and programs. Training and support users; distribution point of Unisa brochures, posters and announcements. Internet access and usage. Collaboration on courier service. Study space for Unisa students. Collaboration on good governance. Collaboration on mobile library service reports. Statistics and information sharing.</p>
SANRAL	<p>The widening of the Nelson Mandela Boulevard interchange bridge on National Route 2 Section 7 from the Main/Vuyani Ncamzama intersection on Nelson Mandela Boulevard (NMB) to the Tabata/Ngcakani intersection on Nelson Mandela Boulevard (NMB), is necessary and would improve safety and mobility in the area.</p>

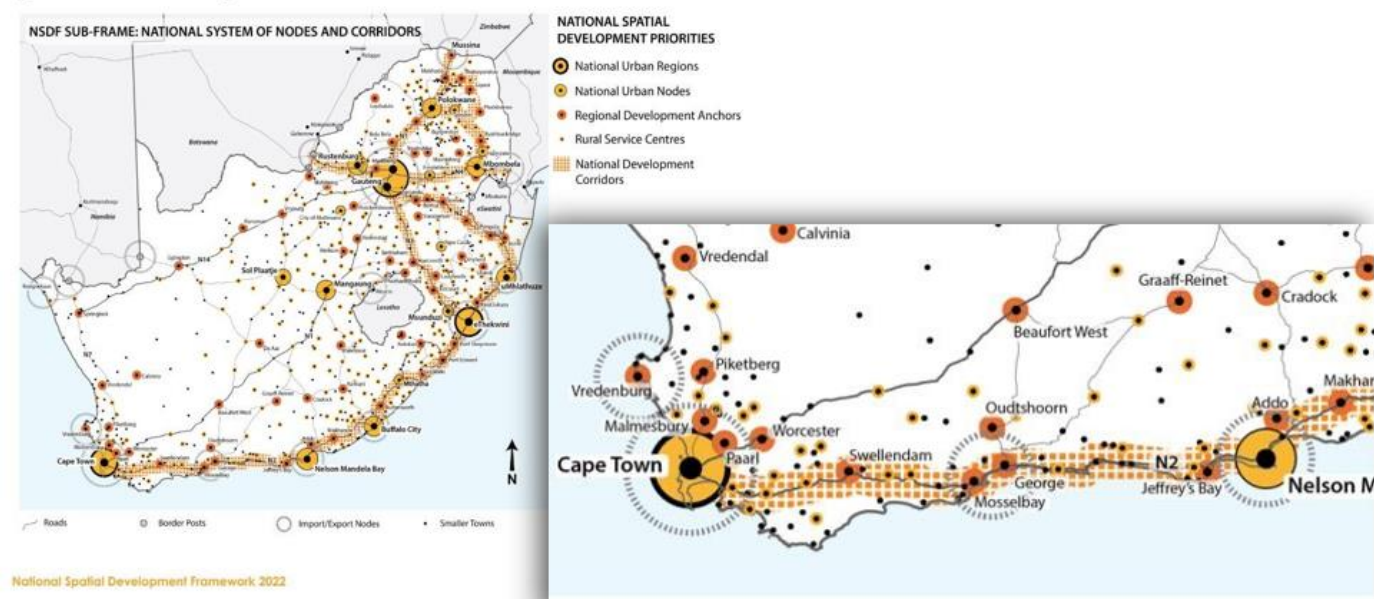

CHAPTER 2: State of the Greater George Area

2.1 Introduction

The municipal area is 5191km² and spans the Southern Cape and Little Karoo regions of the Western Cape Province and is situated halfway between Cape Town and Port Elizabeth. The area administered by the George Municipality forms part of the larger Garden Route District Municipality's jurisdictional area. The George Municipal Area is bordered by the Oudtshoorn- and Mossel Bay Municipal areas (Western Cape province; Garden Route District) in the west and north-west and by the Dr Beyers Naude- and Kou-Kamma Municipal areas to the north, north-east and east (Eastern Cape province: Sarah Baartman District) and by the Knysna- and Bitou Municipalities (Western Cape province; Garden Route District) to the south and southeast. George Municipality administers a vast and diverse geographic area that extends from the dry and climatically extreme Little Karoo in the north, to the wetter more temperate Garden Route in the south. It is an area of considerable natural assets and beauty, including expansive mountains and forests, wilderness areas, a varied coastline, and extensive lakes, rivers and estuaries. Its natural assets include parts of the Garden Route National Park and the Baviaanskloof Wilderness Area. The municipal area also includes fertile farmlands and timber plantations along the coastal plain, fruit orchards in the Langkloof and arid grazing areas in the Little Karoo.

Three important national roads/ routes, the N2, N9 (R62) and N12, traverse the area, and George regional airport serves the Southern Cape and Little Karoo, including the neighbouring towns of Mossel Bay, Oudtshoorn, Knysna and Plettenberg Bay. The George city area is the primary urban centre of the Municipality. 84% of the municipal area's population is located here. Wilderness, Uniondale and Haarlem respectively host the bulk of the remaining urban population. 9% of the municipal area's population is rural. The rural population is declining evidenced by a negative population growth rate per annum of -4% between 2011 and 2016 (StatsSA, 2016)

The National Spatial Development Framework (NSDF), promulgated on 01 February 2023 by the Department of Agriculture, Land Reform and Rural Development identifies George, alongside other municipalities in the District as a Regional Development Anchor and an integral part of the existing national corridor (N2) that holds strong interconnection between (i) high-value rural resource production areas; (ii) ecological resource regions; (iii) popular tourist destinations; (iv) 'comfortable climatic zones'; and (v) urban nodes. This presents opportunities for consolidation of existing cities with multi-modal connectivity infrastructure and includes strengthening of airport development in support of inter-regional trade. The NSDF prioritised the strengthening and consolidation of regional development anchors and in the case of Georg this translates into bigger nodes in denser regions.

Figure 7: Sub-Frame Two: National System of Nodes and Corridors**Figure 41: Sub-Frame Two: National System of Nodes and Corridors**

George is identified, as the primary service centre of the entire garden route region, offering most of the higher order services and facilities one would expect to receive in a metropolitan city, including modern airport infrastructure. It houses the primary administrative and regional offices of companies (and government departments) offering services in the region but is also the heart of the vast tourism offering, and a thriving agricultural sector specialising in export quality berries and other agricultural produce used in beer making and other agri-processing activities. The Regional Scholarship and Innovation Fund (RSIF) also notes the importance of continuity of critical biodiversity areas. The Garden Route District IDP (2021 Review) supports investment in George based on its role as a regional node, but also places emphasis on the protection of the Garden Route (Southern Cape Coastal belt) as a global biodiversity hotspot (Conservation International) and part of the Cape Floristic Region (CFR) (World Heritage status: UNESCO and IUCN).

George has a significantly higher population (double) than the second largest town in the Garden Route, Mossel Bay (DSD2021). In 2019, George municipality contributed over 40% (R18.6 billion) of the GDPR to the economy of the Garden Route. The economy of George is more than twice as big as the next biggest Garden Route municipal economy of Mossel Bay, and almost four times as big as the third biggest Garden Route economy: Knysna.

2.2 Ward Demarcation

The George Municipality is currently structured into the following 28 wards:

Table 10: Municipal Ward Demarcation

Ward	Areas
1	Die Rus, Golden Valley, Kingston Gardens, Riverlea
2	Denneoord, Fernridge
3	Rooirivier, Highlands, Village Ridge, Glen Barrie, Heatherlands, King George Park, Sport Park, Portion of Kingswood Golf Estate, Golf Park 3

28	Central Business District, George South

Below is a map of the Garden Route District in relation to the provincial district boundaries:

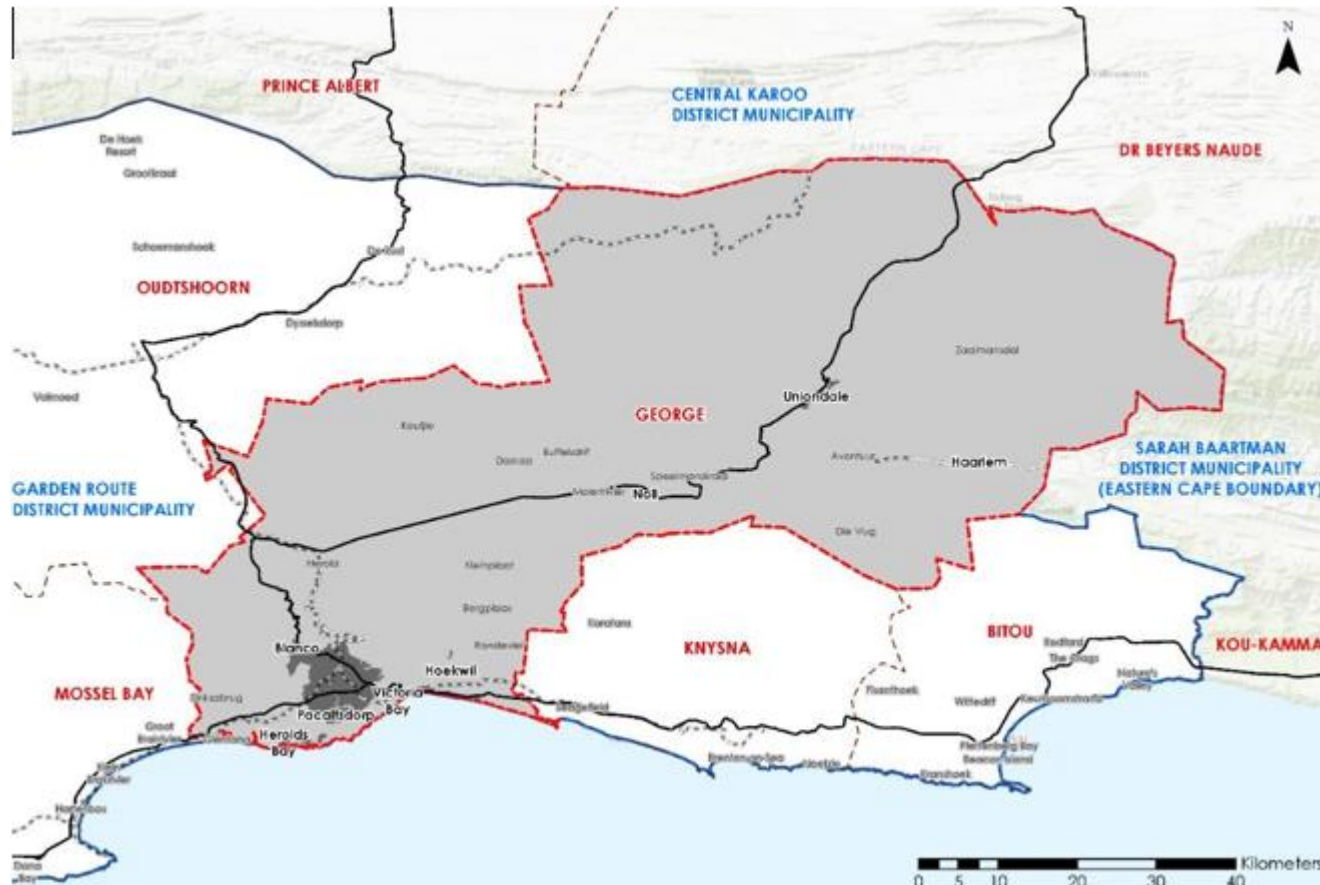

Figure 8: Locality of Garden Route District in relation to Provincial district boundaries

The Western Cape Province makes up 10.6% of the country's land surface and encompasses an area of 129 462 km². The province spatial area includes 1 metropolitan area (City of Cape Town), 5 district municipal areas (Central Karoo, Eden renamed Garden Route, Overberg, Cape Winelands, and West Coast) and 24 local municipalities.

Below is a map of the municipalities in relation to the Garden Route District:

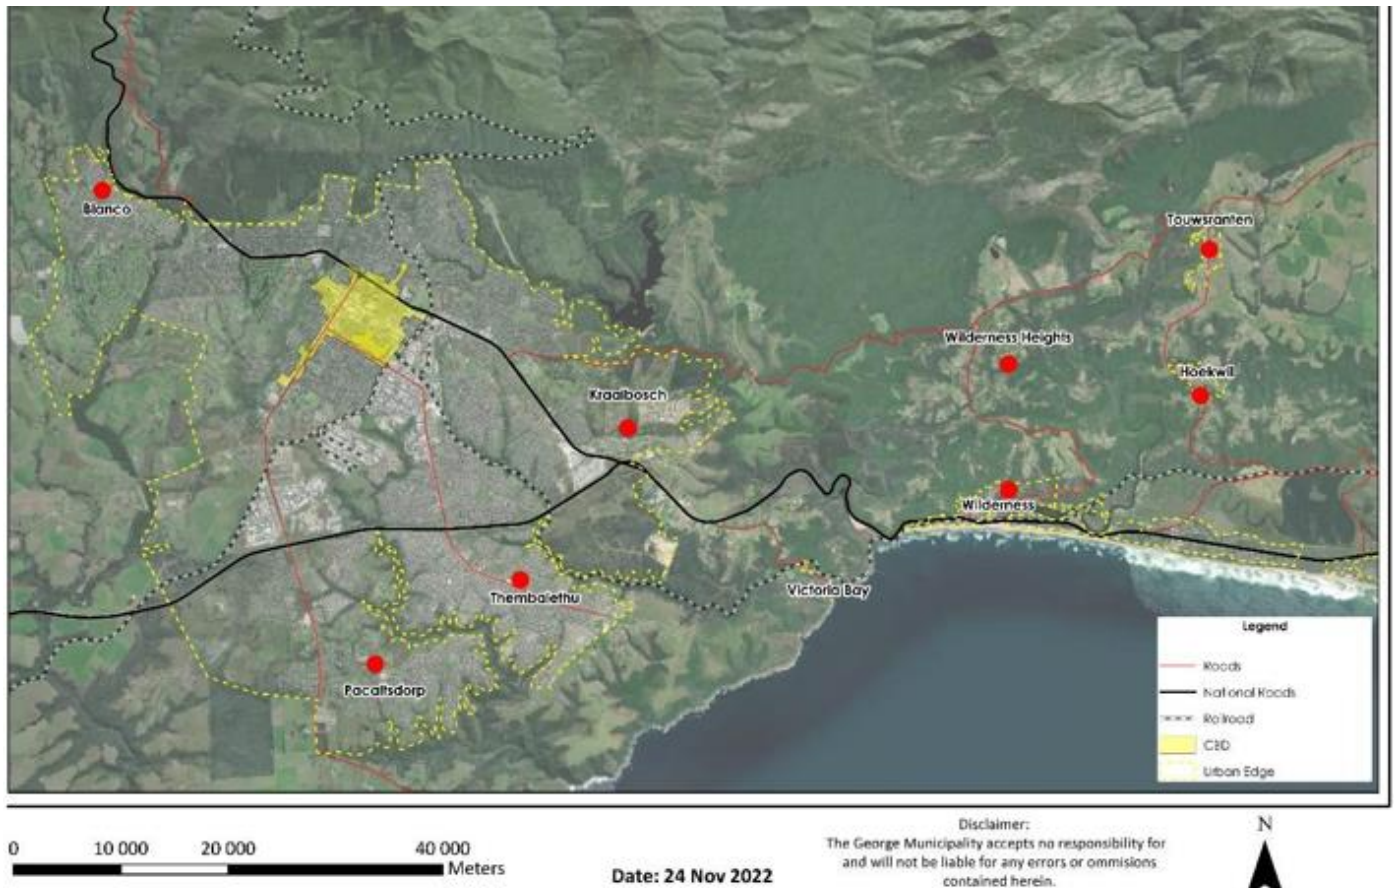

Map 1: Locality map of George in relation to Garden Route District Boundaries

Other main towns within the George Municipal area include Uniondale and Wilderness – with service hinterlands geographically

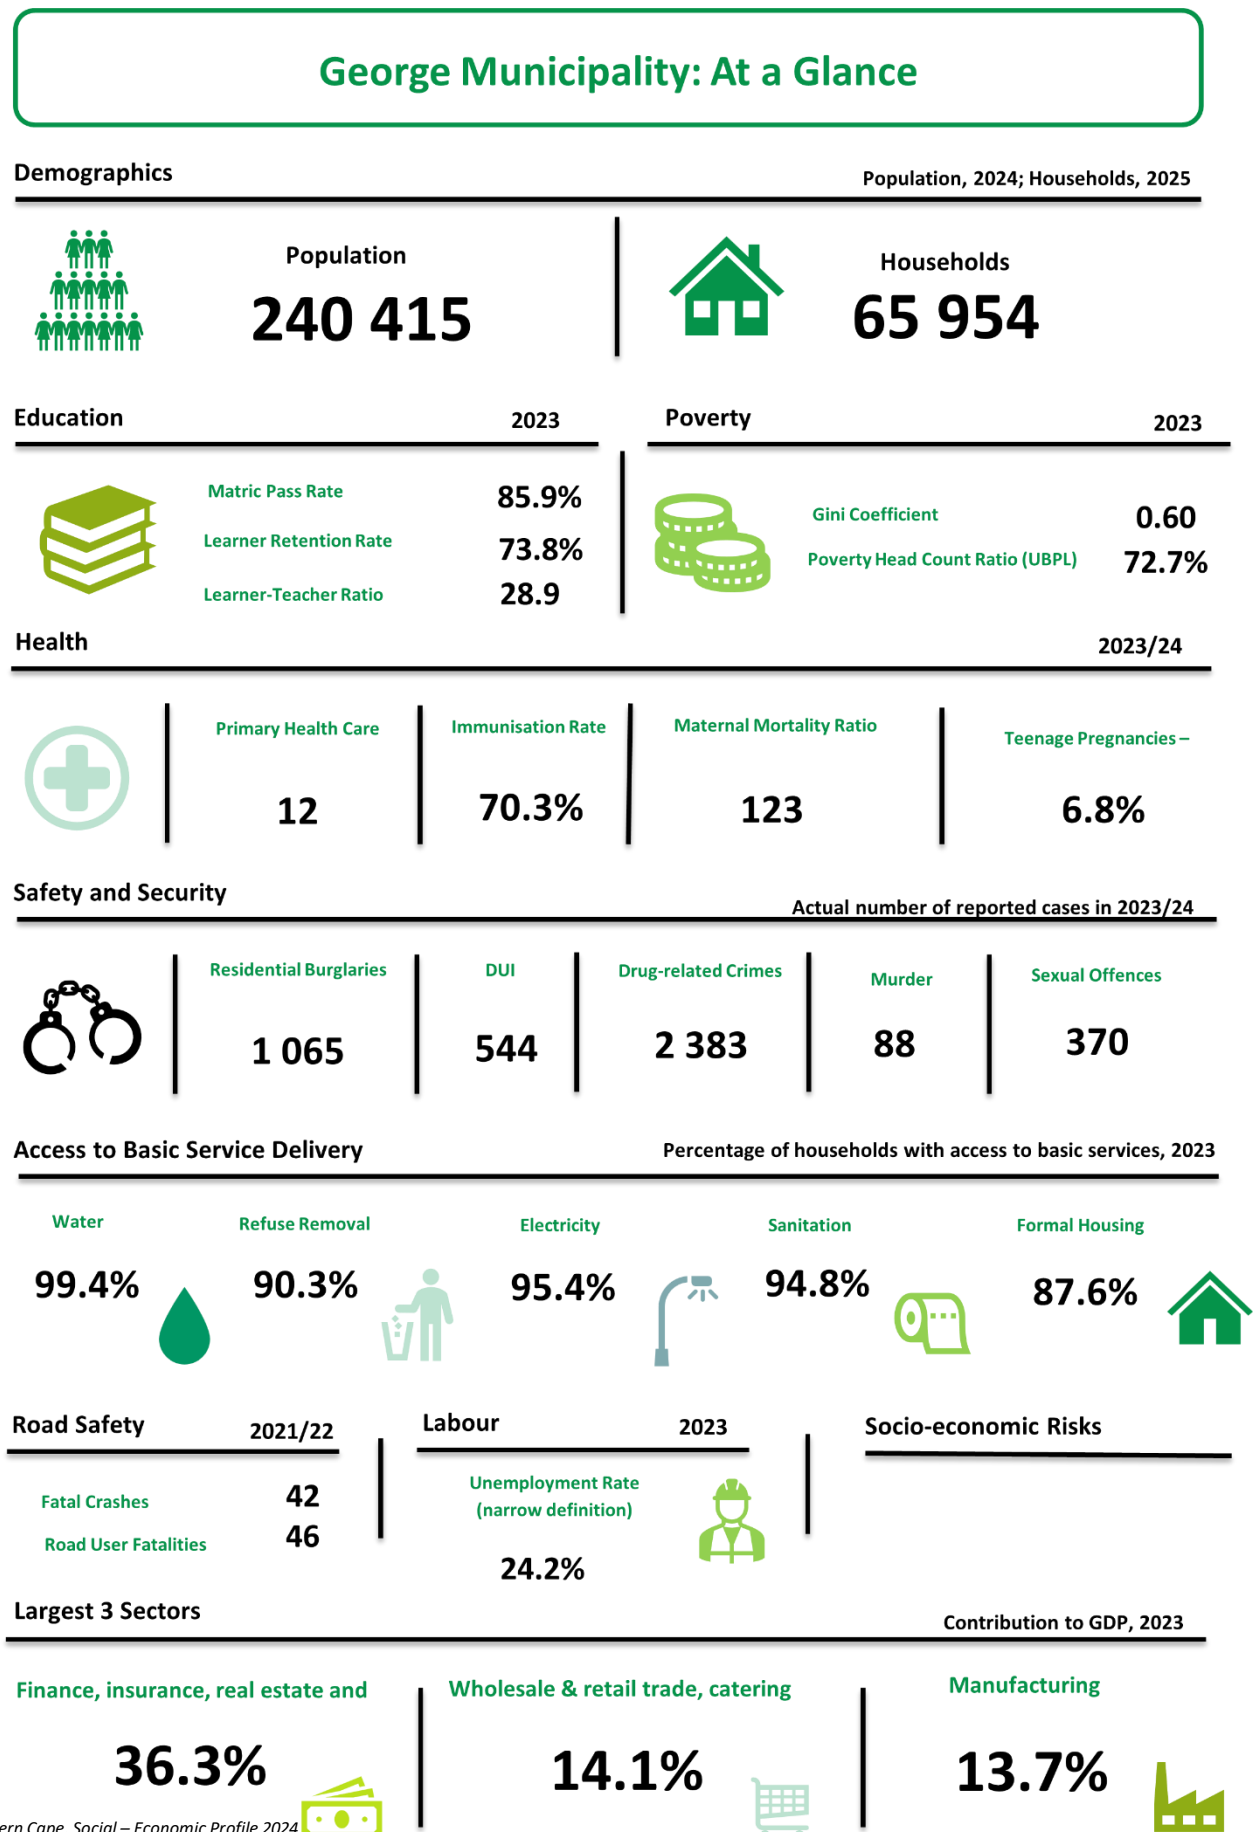

separated from the main city area George. Small rural or tourism settlements include Haarlem, Herold's Bay, Victoria Bay, Touwsrante, Hoekwil, Kleinkrantz, – and various hamlets and rural places like Avontuur, De Vlucht, Herold and Noll. Main Routes include the N9 to Graaf Reinet, the N12 linking to Oudtshoorn, Beaufort West and linking to the N1, and R62 in the Langkloof – connecting the rural hinterland to the east (Gqeberha) and to the N2, being the 'coastal corridor' linking Cape Town to Gqeberha.

2.3 George Municipality at a Glance

Table 11: George Municipality - Summarised Statistics

Source: Western Cape, Social – Economic Profile 2024

2.4 Socio – Economic Context

2.4.1 Population and Household Growth

In 2024, the George Municipality was home to 240 415 individuals, making it the most densely populated municipal area within the region. This demographic prominence can be attributed to its pivotal role as the administrative and economic hub of the Garden Route District (GRD). Notably, George stands as the second fastest expanding municipal jurisdiction in the District. Projections in terms of the Mid-year population estimates (MYPE) series released in September 2024 suggests that the populace will experience an average annual growth rate of 1.2 per cent during 2023 to 2029 period, predominantly driven by semigration into this locale.

With a total of 65 954 estimated households in 2024, the George municipal area exhibits an average household size of 3.5 persons. This figure positions George as the third

highest in terms of household size when compared to the other municipal areas within the District. And this metric is anticipated to diminish, potentially due to a surge of single working-age individuals relocating to the municipal area and shrinking family sizes. Consequently, the expansion of households is forecast to surpass the growth of the overall population. Furthermore, it is noteworthy that the number of households recorded during the 2022 Census exceeds the count utilised in the Local Government Equitable Share calculations by 18.4 per cent, signifying a higher-than-projected rise of households over the interval 2011 to 2022. The divergence, also evident when comparing the MYPE and Census figures, bears implications for the provisioning of municipal services and the requisite infrastructure

Figure 10:

Population and household Growth. Source: Western Cape, Social – Economic Profile 2024

2.4.2 Gender, Age and Race Dynamics

A

more in-depth analysis of the demographic composition within the municipal area reveals that 66.5 per cent of its residents fall within the economically active age group of 15 to 64 years. The presence of a substantial working-age population is of particular significance within a burgeoning economic hub. While the overall population distribution leans slightly in favour of females, there is a notable surplus of males within the 20 to 34 age bracket, indicative of an

influx of working-age males migrating to the municipal area, ostensibly in pursuit of employment opportunities. Moreover, a segment comprising 25.4 per cent of the population is aged below 14 years, thereby engendering a comparatively high dependency on the working-age cohort. This sizable youth contingent underscores a mounting demand for educational resources and future employment prospects within the George

municipal area. Additionally, a sizable elderly population, constituting 8.1 per cent of the total, signifies that the municipal area is an attractive destination for retirement, a pattern observed across the scenic expanse of the Garden Route. The insights derived from the age distribution patterns are instrumental for municipal planning, particularly concerning the availability of housing and government services tailored to meet the diverse needs of

distinct age groups.

Furthermore, the prominent racial demographic category in the municipal area is the coloured population, representing 49.8 per cent of the total population, followed by the black African population at 34 per cent and the white population at 15.7 per cent. The Indian or Asian demographic group is the minority, accounting for merely 0.5 per cent of the municipal populace

Figure 11: Population and household growth. Source: Western Cape, Social – Economic Profile 2024

2.4.3 Level of Urbanisation and Population Density

The George municipal area is 5 191 km² and spans the Southern Cape and Little Karoo regions of the Western Cape. In 2024, it had a population density of 46.3 persons per km² and is expected to rise to 47.7 by 2026. The concentration of the population gravitates toward the town of George, magnetized by the economic opportunities, social amenities, and connectivity advantages it offers. However, Thembalethu distinguishes itself as the most densely populated locale, potentially fueled by growth in informal settlements as individuals migrate into the municipal area.

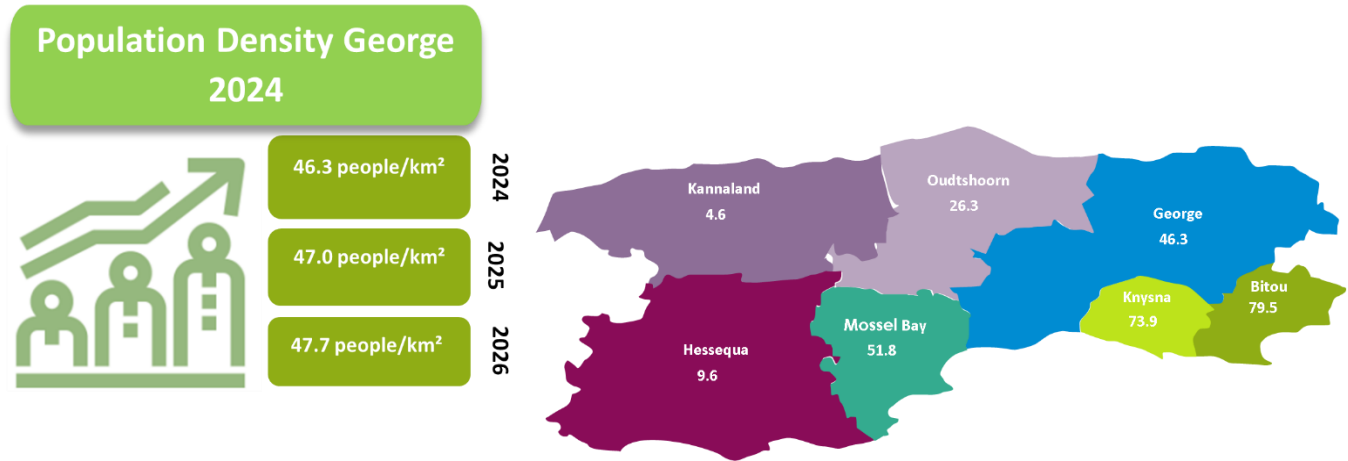

Figure 12: Level of Urbanisation. Source: Western Cape, Social – Economic Profile 2024

2.5 Education

2.5.1 Learner enrolment and teacher-learner ratio

Ensuring that school aged children have access to schools and are enrolled in schools allows the community to meet the future skills demands in a growing economic hub. A more informed and productive society is instrumental in improving the overall quality of life. In 2023, the George municipal area had the highest number of enrolled learners within the GRD, a natural consequence of the greater population size. It experienced notable growth in learner enrollment, witnessing an increase of 1 213 pupils (3.2 per cent) between 2020 and 2023. This expansion is attributed to the concurrent growth of the working-age population in the locality, a phenomenon driven by the availability of employment opportunities and enhanced economic prospects. Typically, families relocating to the area for employment often include school-age children, thereby amplifying the enrollment of learners. This influx of learners has fortunately been accompanied by an increased number of teachers, resulting in a reduction in the learner-teacher ratio, which at 28.9 in 2023 is below the GRD average.

Graph 1: Learner Enrolment
Learner enrolment

Graph 2: Learner- Teacher ratio

Source: Western Cape, Social – Economic Profile 2024

2.5.2 Education and Infrastructure Facilities

Education and skills development play a vital role in shaping the future socioeconomic landscape of the municipal area. They empower the population and significantly impact the local economy's development and its human resource capacity. The Western Cape Education Department is committed to this cause, ensuring access to education for the children of the municipal area with the availability of 50 schools. Nearly three-quarters (72 per cent) of these schools operate as no fee schools. This is positive to note, given that a substantial 24 per cent of learners cited financial constraints as the primary reason for prematurely dropping out of school in 2021. A concerning trend of urban sprawl in the municipal area is however impinging on open land zoned for school developments, concurrently with a lag in the construction of schools. This affects the future availability of proximate schools for a growing populace. Additionally, it is noteworthy that there is a preference for schools situated within the Central Business District, thereby leading to insufficient space available to meet demand.

Figure 13: Educational Facilities Source: Western Cape, Social – Economic Profile 2024

2.5.3 Learner Retention

Economic centres such as George offers economic incentives for completing education more so than is present for its more rural counterparts. The George municipal area by implication has amongst the highest learner retention rates in the District at 73.8 per cent. It is however noteworthy that the upward trend in the learner retention rate has been halted, with a 4.3 percentage point declined observed from 2022 to 2023. This needs to be addressed to enhance the future economic potential of the municipal area.

Figure 14: Learner Retention Source: Western Cape, Social – Economic Profile 2024

2.5.4 Education Outcomes

Lower learner-teacher ratios typically foster robust learner-teacher relationships, enabling the utilisation of personalised teaching approaches, and ultimately contributing to improved academic performance. This effect is present in the George municipal area which has the third highest matric pass rate in the region and saw an improvement in both the matric pass rate and the bachelor pass rate between 2022 and 2023. Pass rates are negatively impacted by mathematics and mathematical literacy outcomes. This needs to be addressed as high performance in these subjects, including physical sciences, are crucial in the enfolding fourth industrial revolution. With a growing demand for skilled labour in the municipal area, matric certificates and higher education qualifications are becoming increasingly important as a lever to lift families out of poverty and contribute to economic development. It is imperative that the determinants influencing the overall quality of education be considered in the quest for optimal educational outcomes. It is however positive to note that over the 2011 to 2022 period, the percentage of persons over the age of 20 without schooling (2.4 per cent) has declined and those with higher education (13.9 per cent) increased, albeit by small margins of less than 2 per cent in both instances.

Graph 4: Education Outcomes

Source: Western Cape, Social – Economic Profile 2024

Graph 5: Subject Outcomes

Source: Western Cape, Social – Economic Profile 2024

2.6 Health

2.6.1 Health Facilities

In 2023, a mere 15.7 per cent of the South African population had access to medical aid, underscoring the significance of government healthcare facilities in delivering essential primary healthcare services to the majority of the country's residents. Within the George municipal area, there was a total of 12 primary healthcare facilities. Additionally, the George municipal area had 4 mobile/satellite clinics, along with one district hospital and one regional hospital, catering to the healthcare needs of the residents.

Furthermore, with the development of 2 additional TB clinics, the residents in the municipal area had access to 18 ART treatment sites and 17 TB clinics in 2023, further enhancing the availability of critical TB and ART treatment services available for households. This is especially necessary with the rising number of ART and TB patients registered for treatment within the municipal area from 2021/22 to 2022/23.

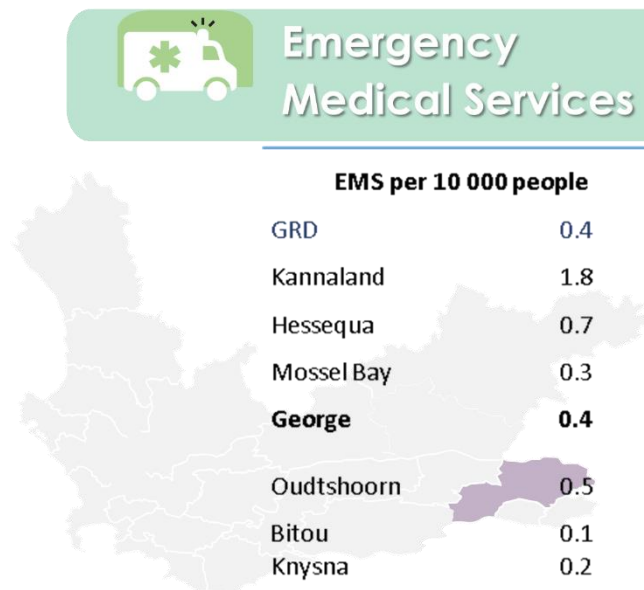

Enhancing the quantity of functional ambulances contributes to an expanded reach of emergency medical services across the municipal area. In the 2022/23 fiscal year, the area had 9 Provincial ambulances, translating to 0.4 ambulances per 10 000 residents. This is consistent with the prior fiscal year. It should be noted that this figure pertains exclusively to Provincial ambulances and does not include private service providers.

Figure 15: Health care facilities

Source: Western Cape, Social – Economic Profile 2024

Figure 16: Emergency medical services

Source: Western Cape, Social – Economic Profile 2024

2.6.2 Maternal Health and Child Health

Within the George municipal area, there has been an observable decline in teenage pregnancies. In 2023/24, 271 deliveries (6.8 per cent) occurred among females under the age of 19, which is slightly lower than the District rate of 11.5 per cent. The decrease in teenage pregnancies coincided with a slight increase in pregnancy terminations, with 654 pregnancy terminations reported in 2023/24. The high rate of teenage pregnancies reflects a need for expanded family planning initiatives and support services within the municipal area and greater GRD, as unplanned pregnancies poses a risk to the future quality of life of

teenagers.

2 862 children under the age of one were immunised, translating to an immunisation coverage rate of 70.3 per cent. This exhibits a reduction thereby placing a greater proportion of young children at risk of serious illness. The prevalence of malnourished children under the age of five, particularly those suffering from severe acute malnutrition, per 100,000 individuals in the municipal area, saw a marginal decline from 2022/23 to 2023/24. Furthermore, the percentage of infants born with a birth weight of less than

2.5 kilograms also decreased over this period. In both cases, the municipal area has not yet reverted to pre-pandemic levels. While the reductions in poverty and government feeding schemes have contributed to the marginal decline in malnourished children, there remains a continued challenge in terms of households' access to nourishing food.

With 4 maternal deaths and 56 babies dying before 28 days of life, the municipal area has amongst the highest maternal and neonatal mortality rates in the Province, presenting a concerning development especially as these rates have increased from 2022/23 to 2023/24. This emphasizes the need for improved antenatal and postnatal care.

Graph 6: Maternal health

Source: Western Cape, Social – Economic Profile 2024

² **Community Health Centre:** A facility that normally provides primary health care services, 24-hour maternity, accident and emergency services and beds where health care users can be observed for a maximum of 48 hours, and which normally has a procedure room but not an operating theatre.

³ **Community Day Centre:** A health facility that provides a comprehensive health care services during day hours, including mother and child health, chronic diseases care, women's health, HIV and TB care, men's health, acute services, physiotherapy, mental health services and oral health care.

Graph 7: Child Health

Source: Western Cape, Social – Economic Profile 2024

Graph 8: Tuberculosis and HIV/AIDS

Source: Western Cape, Social – Economic Profile 2024

2.6.3 GDP Per Capita

During the timeframe spanning from 2017 to 2023, the regional population exhibited a growth rate surpassing that of the economy, resulting in a notable decline in the GDP per capita i.e., GDP per person. Over this period, GDP per capita experienced a robust decrease of 7.5 per cent, indicative of declining standards of living and economic well-being within the George municipal area. At R61 616, the GDP per capita exceeded the District average (R53 875) but remained below that of the Western Cape, pointing to potential areas for further improvement.

However, it is imperative to acknowledge that the distribution of GDP per capita within the George municipal area is not uniform. Disparities prevail, with a segment of the population enjoying affluence, while others grapple with financial challenges in an economic landscape characterized by inflation, escalating interest rates, and unemployment.

Graph 9: GDP per capita

Source: Western Cape, Social – Economic Profile 2024

2.6.4 Income Inequality

South Africa suffers among the highest levels of inequality in the world when measured by the commonly used Gini index. Inequality manifests itself through a skewed income distribution, unequal access to opportunities, and regional disparities. The National Development Plan (NDP) has set a target of reducing income inequality in South Africa, endeavouring to lower the Gini coefficient from 0.7 in 2010 to 0.6 by 2030. The George municipal area nearly meets that goal at 0.60 but has amongst the most unequal distributions of income in the Province. This reflects the discrepancy between persons with well remunerated jobs in George as well as affluent households living on the coast, compared to the lower income earned by rural farm workers in areas such as George Rural, Haarlem and Uniondale as well as households residing in the numerous informal settlements across the municipal area. Income inequality is also more pronounced among the coloured and black African demographic groups where some households have built wealth, whilst others have yet to escape the poverty trap.

Graph 10: Income Inequality

Source: Western Cape, Social – Economic Profile 2024

2.6.5 Poverty

The Upper Bound Poverty Line (UBPL) head count ratio is the proportion of the population living below the UBPL i.e., that cannot afford to purchase adequate levels of food and non-food items. The UBPL in South Africa is R1 558 (in April 2023 prices) per person per month. In 2023, 72.7 per cent of the George municipal population fell below the UBPL. This figure improved marginally from the 73.0 per cent recorded in 2017, indicating progress despite the challenging economic conditions facing households across the country.

While the municipal area exhibits lower levels of poverty compared to the District, the situation is far from comforting, given the significant number of households experiencing the adverse effects of poverty. These consequences include lower life expectancy, malnutrition, food insecurity, heightened exposure to crime and substance abuse, reduced educational attainment, and substandard living conditions. Therefore, the NDP sets the ambitious goal of eradicating poverty by 2030. To alleviate these negative impacts of poverty, the Department of Social Development George issues grants offering vital income support to these households, while municipal indigent support and various free services offered by the Western Cape Government such as health care and education support households living in poverty.

Graph 11: Poverty

Poverty Line

Source: Western Cape, Social – Economic Profile 2024

2.7 Basic Service Delivery

The Constitution stipulates that every citizen has the right to access to adequate housing and that the state must take reasonable legislative and other measures within its available resources to achieve the progressive realisation of this right. Access to housing also includes access to services such as potable water, basic sanitation, safe energy sources and refuse removal services, to ensure that households enjoy a decent standard of living.

Indigent Households Garden Route Municipalities

Source: Western Cape, Social – Economic Profile 2024

2.7.1 Housing and household services

Of the 64 634 households within the George municipal area in 2023, 87.6 per cent had access to formal housing, slightly below the Garden Route District average of 89.4 per cent. This is despite the housing units constructed by the state, catering to the housing needs of low-income households. Furthermore, the rate is dragged downward due to the large proportion of informal housing in the George municipal area. With 12.2 per cent of households living in informal dwellings, 0.9 per cent in traditional dwellings and 0.2 per cent in other/unspecified housing, it reflects further room for improvement to see enhanced living conditions for vulnerable households in the George municipal area.

Access levels for essential services in the municipal area surpassed the access to formal housing. Specifically, 99.4 per cent of households had access to piped water (within the dwelling, yard, or via a communal/neighbor's tap), 94.8 per cent had access to a flush or chemical toilet, 95.4 per cent had access to electricity (including generators) for lighting, and 90.3 per cent received weekly refuse removal by the local authority. However, these service access levels were below or in line with the corresponding District averages across all categories, excluding access to basic levels of sanitation. This lag underscores the challenges faced by the Municipality in keeping pace with the growing demand for services, as well as the difficulties associated with extending services to rural farmlands and informal settlements. The considerable surge in informal structures during the COVID-19 pandemic further intensified this challenge.

2.7.2 Free Basic Services

Municipalities also provide a package of free basic services to households who are financially vulnerable and struggle to pay for services. The George Municipality's basket of rebates and allowances for the indigent are amongst the highest in the Province.

There was a significant surge in registered indigent households in 2020 attributable to the adverse economic impact of the COVID-19 pandemic, which resulted in income losses impeding households' capacity to cover their municipal service expenses. As poverty rates have been reduced, there is also an observed 9 per cent annual average decline in households registered for indigent support from 2020 to 2023, thereby now reaching levels below the pre-COVID period. The stressed economic conditions will however continue to exert pressure on household incomes and thereby keep demand for free basic services at elevated levels.

2.8 Safety and Security

2.8.1 Crime rates in the GRD and George Municipality

The high levels of poverty and inequality give rise to elevated crime levels necessitating the development of the Western Cape Safety Plan. In it, the Western Cape Government (WCG) expresses their vision to ensure that the Province is a place where all people feel secure and live free from fear. The George Municipality shares this goal, as it is not spared from the safety concerns present throughout the Province and GRD.

Crime levels in the George municipal area fortunately declined from 2022/23 to 2023/24. The primary factors contributing to crime in the George Municipality and greater region of the Garden Route include the absence of surveillance cameras in high-risk areas, inadequate lighting, high unemployment rates, drug and alcohol abuse, instances of domestic violence, repeat offences by released prisoners, the seasonal influx of labourers and social intolerance.

The George municipal area exhibits elevated occurrences of contact crimes such as murder and sexual offences, when compared to the GRD. However, the GRD contends with elevated crime rates across all other categories delineated in the infographic. It is essential to acknowledge that these other crime categories, including drug-related offenses, burglaries, and commercial crimes, are exacerbated by elevated poverty levels, which are more pronounced in other municipal areas relative to George.

Figure 17: Murder Statistics

Source: Western Cape, Social – Economic Profile 2024

2.8.2 Total reported cases of Crime

Murder is defined as the unlawful and intentional killing of another person. 88 murders were reported in the municipal area, largely attributed to gangsterism. The George community speaks out against gang related violence, indicating that they are tired of being victimized in their own communities. Similarly, common assault (assault that involves the use of force or violence against another person without causing serious bodily harm) is at elevated levels with 1 774 cases reported, influenced by gangsterism, substance abuse as well as gender-based violence.

South Africa is amongst the top 5 countries in the world with respect to reports of rape. George is no exception with 370 cases of sexual offences (including rape, sex work, pornography, public indecency and human trafficking) reported within the George municipal area, down from 401 in 2022/23. It should be noted that many cases of sexual offences go unreported. Substance abuse drives up drug-related crimes (a situation where the perpetrator is found to be in possession of, under the influence of, or selling illegal drugs) with 2 383 cases reported, and saw the largest rise from the 2021/22 levels. In addition, Driving under the influence of drugs or alcohol (where the driver of a vehicle is found to be over the legal blood alcohol limit) had 544 reported cases. Alcohol use is a leading factor in road traffic crashes. Substance abuse places a burden on health care and police services, disrupts families and bears significant social and economic costs within communities.

Substance abuse and poverty further contribute to residential burglaries (the unlawful entry of a residential structure with the intent to commit a crime, usually a theft) with 1 065 cases reported in the George municipal area, while difficult economic times is met with a rise in commercial crimes (theft, fraud or dishonesty committed against a business by an employee that results in the business suffering financial loss) as an easy way for employees to maintain their standard of living. In addition to this, 888 cases of malicious damage to property, severely impact local businesses, especially SMMEs. Failure to curb such crimes can lead to a vicious cycle of declining economic activity and joblessness that fuels poverty and gives rise to other crimes across the District.

Curbing crime is crucial to realizing the vision of the WCG that is “a safer Western Cape where everyone prospers”.

Figure 18: Actual number of crimes reported

Source: Western Cape, Social – Economic Profile 2024

2.9 GDP Performance

2.9.1 Sectoral Overview

Once primarily dependent on traditional industries like fishing and agriculture, George's economy has diversified over the years. The municipal area has witnessed significant growth in sectors such as boutique tourism, artisanal crafts, and small-scale manufacturing, reflecting the region's ability to adapt to changing economic conditions. With a thriving tourism sector, a growing focus on sustainable development, and the continued prominence of agriculture, George is positioning itself as a hub for both innovation and preservation. The combination of its rich natural resources, strategic location, and expanding industries makes George a dynamic and resilient economy, catering to a wide array of industries and livelihoods.

The George municipal economy was valued at R18.660 billion in 2023, representing 40.4 per cent of the GRD economy and solidifying its position as the commercial hub of the region. Key contributors to the municipal GDP included finance, insurance, real estate, and business services (36.3 per cent); wholesale and retail trade, catering, and accommodation (14.1 per cent); and manufacturing (13.7 per cent). In 2023, the finance sector emerged as a key driver of economic growth, supported by developments in the call center industry and elevated interest rates. Alongside finance, the transport, community services, and general government sectors also recorded positive GDP growth compared to 2022. The primary sector—dominated by agriculture, forestry, and fishing—accounted for only 3.9 per cent of the economy but remains a critical employer in rural areas. George's economy is diverse, blending contributions from high-value sectors and traditional industries. This reflects a transition toward a more skilled workforce while maintaining its role as a regional commercial and tourism hub.

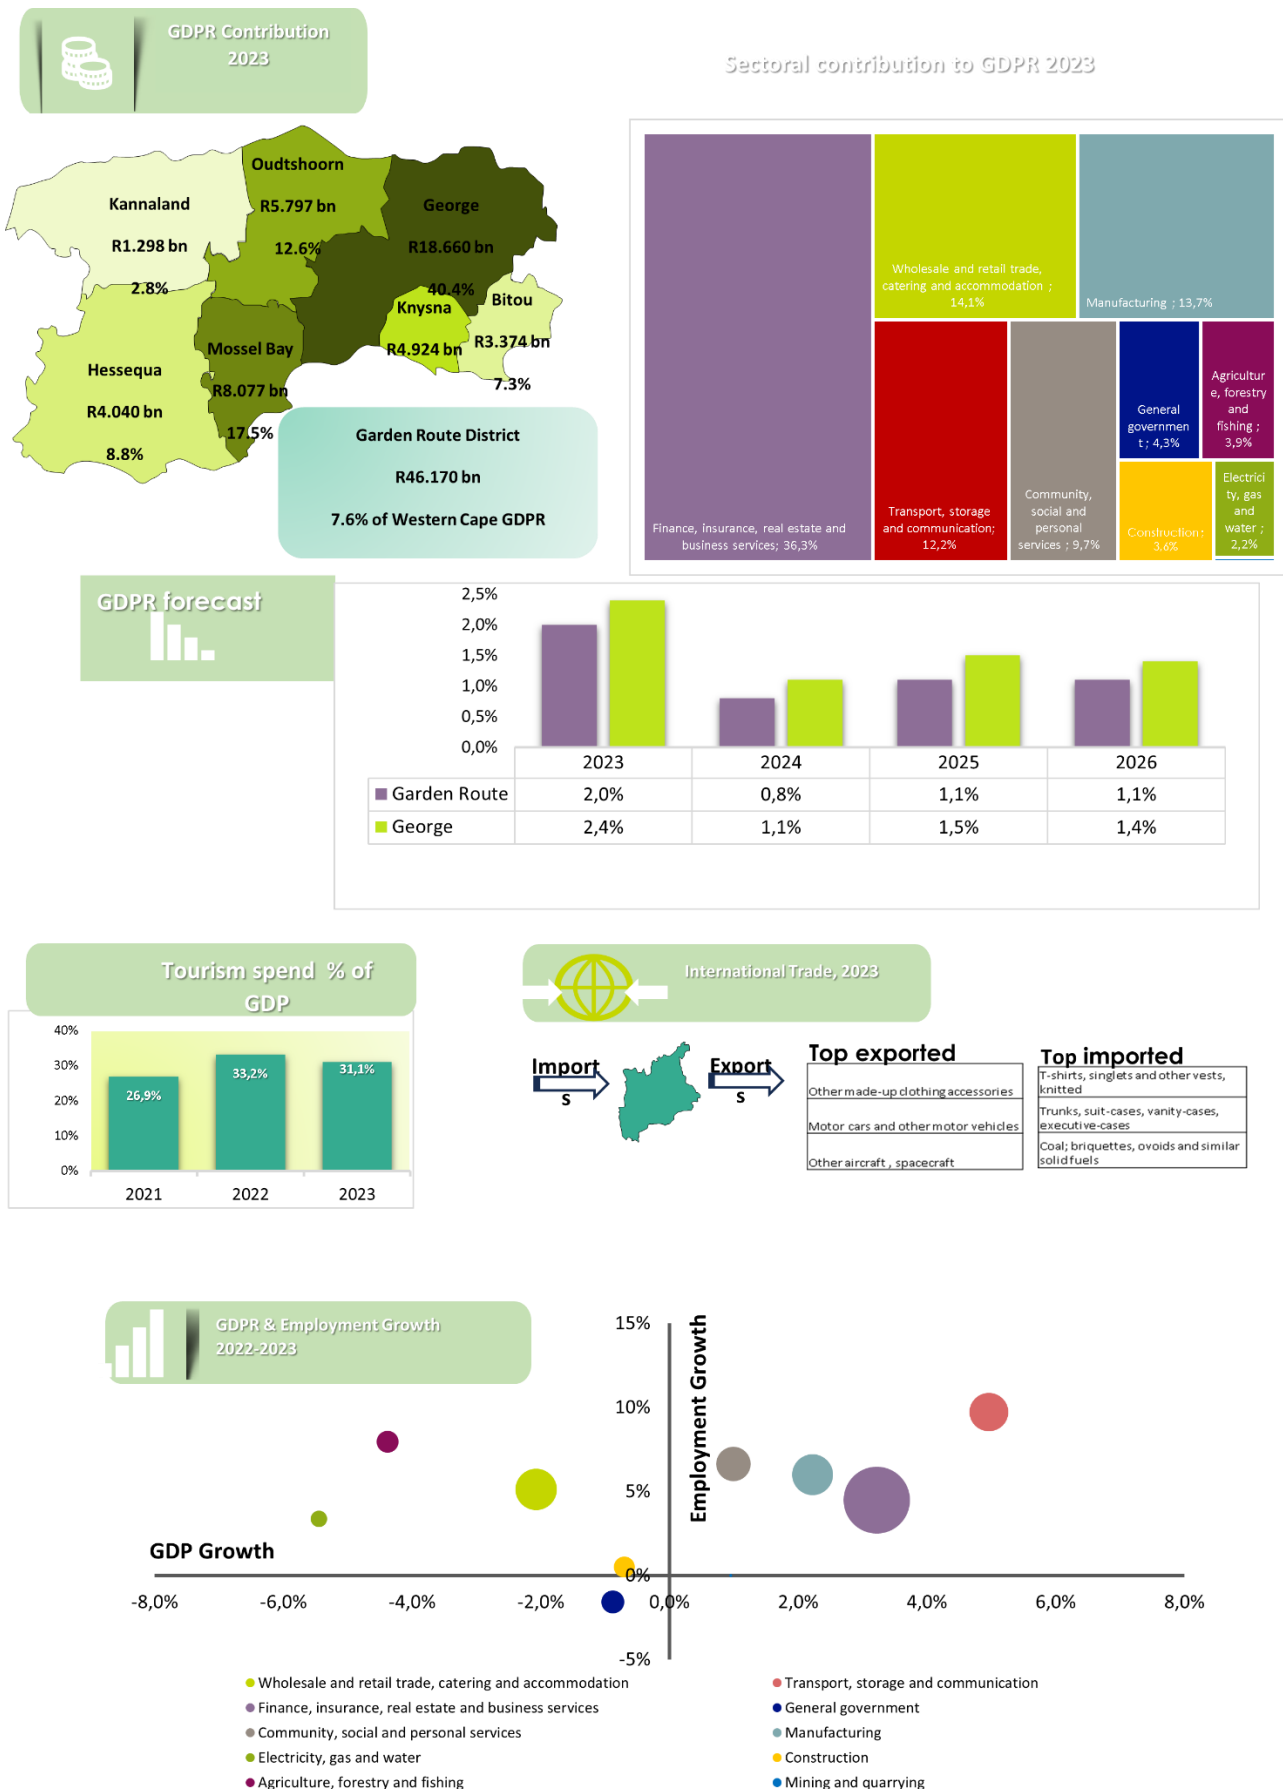

The George municipal economy achieved GDP growth of 2.4 per cent in 2023. Leading this expansion, the finance, insurance, real estate, and business services sector contributed 1.2 percentage points to growth. The transport, storage, and communication sector added 0.6 percentage points, while manufacturing and community services contributed 0.3 and 0.1 percentage points, respectively. Conversely, the agriculture, forestry, and fishing sector detracted from growth, reducing GDP by 0.2 percentage points. While George remains a significant producer of timber, dairy products, and livestock—including beef and poultry—its agricultural sector faced challenges in 2023. These included high input costs, declining international commodity prices, and environmental pressures such as climate change, which continue to affect local farming and fishing industries.

In 2023, the George municipal area recorded a trade deficit of R645.0 million, with exports totaling R770.0 million and imports reaching R1.4 billion. Over the past decade, exports grew steadily from R298.1 million in 2012 to R770.0 million in 2023, while imports increased from R422.8 million to R1.4 billion over the same period. The surge in imports has been driven primarily by demand for manufactured goods and industrial inputs. Strategically located along major transport routes between Cape Town and Gqeberha and home to a regional airport, George is well-positioned as a growing urban hub with strong logistical and industrial potential.

The wholesale and retail trade, catering, and accommodation sector contracted by 0.3 per cent in 2023, a decline that aligns with reduced tourist spending. After a sharp recovery in 2022—when tourist expenditure rose from 13.9 per cent of GDP in 2021 to 17.6 per cent due to eased COVID-19 restrictions—spending moderated to 16.1 per cent in 2023.

Growth in the George municipal economy is projected to slow, with forecasts of 1.1 per cent in 2024, 1.5 per cent in 2025, and 1.4 per cent in 2026, although it will be expanding at a faster rate than the rest of region. While this speaks to the resilience of the local economy, the uneven sectoral performance underscores the importance of further diversifying the local economic base. By strengthening core sectors such as finance, transport, and manufacturing while addressing critical infrastructure needs, George can enhance its resilience to external shocks and progress toward a more balanced and sustainable economic future.

Figure 19: GDP Performance

Source: Western Cape, Social – Economic Profile 2024

2.10 Labour Market Performance

The George municipal area accounted for 36.2 per cent of district employment in 2023, providing 81 949 jobs. The workforce composition highlights a significant presence of semi-skilled workers (38.7 per cent), low-skilled workers (26.3 per cent), and skilled workers (35.0 per cent). This distribution underscores George's diverse labour market and its gradual transition toward higher-skilled roles, particularly in finance and business services.

The local economy functions as a regional hub for government services, providing employment to over 4,000 individuals, including 2,270 in local government and 1,772 at the provincial level. Key sectors such as finance, business services, wholesale and retail trade, and manufacturing have been significant drivers of job creation. However, challenges such as infrastructure limitations present risks to sustained economic recovery. Despite these constraints, the high concentration of employment in high-income sectors enables the local economy to maintain a greater proportion of high-income earners compared to other municipalities within the district. Agriculture remains vital for local employment, with mixed farming generating 2 446 jobs and vegetable farming contributing 790 jobs. Herolds Bay and Uniondale rely heavily on these activities. Dairy and mixed farming, supported by prominent dairy processors like Clover and Lancewood headquartered in the municipal area, also have a positive impact on employment, while tourism contributes significantly, particularly in Wilderness.

Total employment increased by 5.2 per cent in 2023, adding 4 035 new jobs and reflecting a steady recovery from the COVID-19 pandemic. The unemployment rate also declined from 28.2 per cent in 2021 to 24.2 per cent in 2023, largely driven by informal employment. However, Full-Time Equivalent (FTE) formal jobs have only seen gradual recovery, with a modest 0.8 per cent increase in 2022, pointing to lingering structural challenges.

The tertiary sector's contributions to both employment and GDP are notable. Retail activities, such as the sale of clothing and footwear, supported 962 jobs, while short-term accommodation (932 jobs) and food services (846 jobs) reflected tourism-driven demand. Between 2022 and 2023, George achieved a net gain of 823 jobs, driven by growth in mixed farming (330 jobs), business organizations (226 jobs), and non-perennial crop farming.

Despite these gains, certain sectors experienced significant job losses. Construction, particularly civil engineering projects, saw a decline of 333 jobs, while private security activities lost 206 jobs. The primary sector faced setbacks, with 178 jobs lost in vegetable and melon farming, and real estate struggled, shedding 297 jobs. These declines underscore challenges like skill mismatches and rising costs, necessitating targeted interventions.

High-value sectors like finance and business services contributed 36.3 per cent to GDP with 3.2 per cent growth but generated limited employment, with only 4.5 per cent job growth. Conversely, agriculture and community services saw substantial job growth but faced declining GDP contributions due to high input costs and reduced commodity prices. However, agriculture's challenges are expected to stabilize as markets normalize in 2024, while environmental factors remain a risk to the sector.

Transport and retail sectors exhibited strong job growth, emphasizing the importance of these services in George's economy.

Labour market indicators reveal mixed trends. The labour force participation rate decreased from 52.7 per cent in 2022 to 51.6 per cent in 2023, while the labour absorption rate rose from 38.3 per cent to 39.1 per cent, indicating improved employment opportunities relative to the working-age population. However, the non-economically active share of the working-age population grew significantly, from 62.1 per cent to 64.4 per cent, highlighting barriers to labour market participation, such as discouragement, skills mismatch, caregiving responsibilities and education.

To foster sustainable growth, George must balance high-value sectors with labour-intensive industries and address sector-specific challenges. Investments in infrastructure, skills development, and economic diversification will be crucial in building a resilient and inclusive labour market.

Figure 20:

Labour Market Performance

Top 5 Sectors for job gains and job losses (FTE)

Top 5 Sectors

Sector	No. of FTE Jobs
Mixed farming	2 446
General public administration at Local Government level	2 270
General public administration at Provincial Government level	1 772
Public order and safety activities at National Government level	987
Retail sale of clothing, footwear and leather articles in specialized stores	962

Source: Western Cape, Social – Economic Profile 2024

2.11 Risk and Vulnerability Factors

2.11.1 Sea Level and Storm surges

Sea levels are expected to rise steadily for at least the next 200 years. The current thermal expansion of the oceans will result in 0.25m – 0.75m of sea level rise by 2050, with associated swash run-up of roughly 3.0m – 3.5m above the mean sea level (excluding tidal influence). Sandy shores are most affected – some areas in the Garden Route have seen beaches retreat landward at a rate of 1m per year. This directly affects infrastructure and detracts from the amenity value of the coastline.

2.11.2 Drought

Climate change will result in decreases in rainfall in spring and especially autumn, although the overall annual change will be negligible. Projections, however, indicate that by 2050, drought risk in the Garden Route District Municipality will increase from 2 possible drought years per decade to 3 years per decade, mainly driven by increased overall temperatures as higher rates of evaporation will increase the risk of water supplies running low. Insufficient water will interrupt agricultural production as well as agricultural and marine product processing, whilst placing severe constraints on towns and settlements.

2.11.3 Environmental threats and climate change

George faces a number of environmental threats, including from deteriorating ecosystem functioning, water security concerns, floods, wildfires and coastal erosion. At the same time, modelling of climate systems allows us to anticipate what the climate will look like later in the century, and hence where and how the environmental risks are likely to intensify.

2.11.4 Disaster Risk

Disaster Risk Management is important not only for everyday safety of people, but also to reduce the costs of disasters when they strike. The table lists some ways in which climate change will impact disaster risks identified in the Disaster Risk Management Plan of the municipality.

2.11.5 Floods

Although drought is a major concern going forward, flooding remains as big a concern for the George Municipality. Projections indicate increased storm intensity in winter, leading to more rainfall in shorter periods and therefore a higher likelihood of flooding.

2.11.6 Wildfires

Temperatures in the George municipal area will continue to rise, resulting in 19 more hot days (temperatures above 30 degrees Celsius) per year by 2050. By 2050, the region will also decrease the number of frost days in the higher interior region. On hot days productivity becomes constrained, and the risk of wildfires increase rapidly. In an already dry environment, wildfires can become extremely destructive.

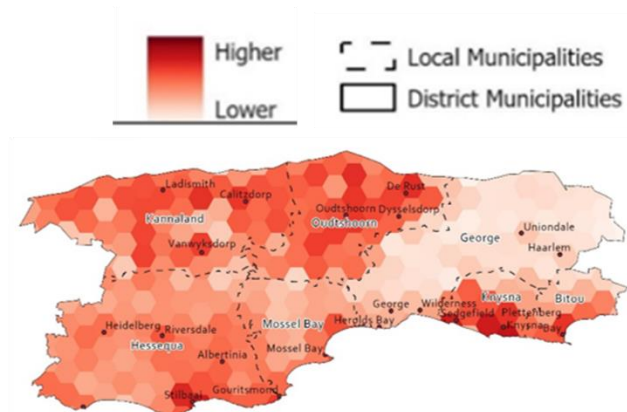

HAZARDS*

Hazard and category name	Impact of Climate Change
Drought	Increased likelihood of multiyear drought Water security concerns Agricultural impact Watercourse deterioration Estuarine deterioration
Wildfires	Increased frequency of fire-risk days Increased flammability of biomassfuel
Floods	Increased intensity of rainfall events Drier conditions could make ground impervious to sudden, intense rainfall events
Disruption: Water Supply	Increased competition for water resources
Alien Invasive Species (Vegetative)	Faster spread and growth due to conducive climate
Urban Fires	Increased frequency of fire-risk days Increased flammability of biomassfuel
Endemism (Loss To Biodiversity)	Degradation in ecosystem assemblages as conditions change
Road Incidents	Increased temperature leading to deterioration of road surface
Hazmat Incidents: Roads And Industries	Temperature or flood related road surface or rail damage
Major Hazardous Installation	Extreme weather conditions

ENVIRONMENTAL THREATS

CLIMATE RISKS

Intensification of hot and dry conditions

Climate parameter	Change from present conditions (projections for 2050)
Decrease in total annual rainfall	-8 mm
Decrease in number of days per year with >10mm of rain	+1 day
Decrease in maximum amount of rain in a 5-day period	7 mm
Number of dry years per decade	3 years/decade (1 year more than at present)
Increase in average annual temperature	1.2°C
Additional days per year with temperatures above 30°C	19 days
Days per year with temperatures below 0°C	-3 days
Sea-level rise	42 cm

Source: <https://www.elsenburg.com/wp-content/uploads/2022/08/SmartAgri-Climate-Change.pdf>

2.12 Conclusion

George, a coastal municipal area nestled amid picturesque hills and the Indian Ocean, stands as a distinctive and promising locale. As a growing economic hub within the GRD, the George municipal area faces the dynamic challenges of an expanding population, giving rise to amplified demands for housing, municipal services, and essential government provisions like education and healthcare. Despite these challenges, diligent efforts have expanded the range of services to accommodate the burgeoning population, rendering the area an appealing destination for residents, workers, and prospective investors.

The municipal economy has effectively rebounded from the adverse consequences of the COVID-19 pandemic. Although employment recovery initially lagged behind the economic resurgence, it has since returned to pre-pandemic levels, primarily due to a notable upswing in informal employment opportunities. This has exerted a favorable influence on the unemployment rate, reduced poverty rates, and decreased the proportion of households registered as indigent. Consequently, these improvements have also contributed to lower rates of child malnutrition. Nevertheless, it remains imperative to address the persistent issue of elevated inequality within the municipal area, as it engenders concerns related to safety and security, manifesting in escalating crime rates, particularly in contact crimes such as murders, sexual offenses, and common assaults. The promotion of safety and security holds paramount importance for both the Municipality and the Western Cape Government.

Significant strides have been made in education, signaling positive prospects for meeting the surging demand for skilled individuals in the expanding tertiary sector of the municipal economy. Learner retention rates have improved, partly attributed to declining rates of teenage pregnancies. However, it is unfortunate that the matriculation pass rates experienced a decline from 2021 to 2022. This decline primarily stems from underperformance in mathematics and maths literacy, necessitating targeted interventions.

To effectively address the developmental challenges outlined above and further enhance the well-being of municipal area residents, sustained collaboration among the Municipality, other tiers of government, and the private sector is imperative.

CHAPTER 3: Strategic Policy Context

3.1 Municipal Vision and Strategy

THE GEORGE MUNICIPALITY HAS COMMITTED ITSELF TO THE FOLLOWING VISION AND MISSION:

Vision

“A City for a Sustainable Future”

Mission

To deliver affordable quality services; develop and grow George; keep George clean, safe and green; ensure good governance and human capital in George and to participate in George

In all our work and engagements with the community and other stakeholders, we subscribe to the following:

Equal Opportunity

As servants of the public, we undertake to perform the functions and operations of the municipality in an honest and ethical manner.

Compassion

As responsible public servants, we pledge to perform our duties in a manner that is open to oversight and public scrutiny. This commitment is shaped by our understanding to give an account of our actions to individuals, groups and organisations.

Sustainability

We, as custodians of hope, will work tirelessly at transforming our municipality, communities and broader society by unlocking the endless possibilities that our valley holds and treasures. This commitment is shaped by our understanding of the historical, spatial, social and economic inequalities in our valley.

Good Governance and Integrity

We will continuously review our systems, procedures and processes to make them less bureaucratic and more responsive to customer needs. We will acknowledge and reward initiatives that show creativity and ingenuity. The municipality is a responsive municipal entity with zero tolerance for corruption and illegal actions.

Innovation and Entrepreneurial Solutions

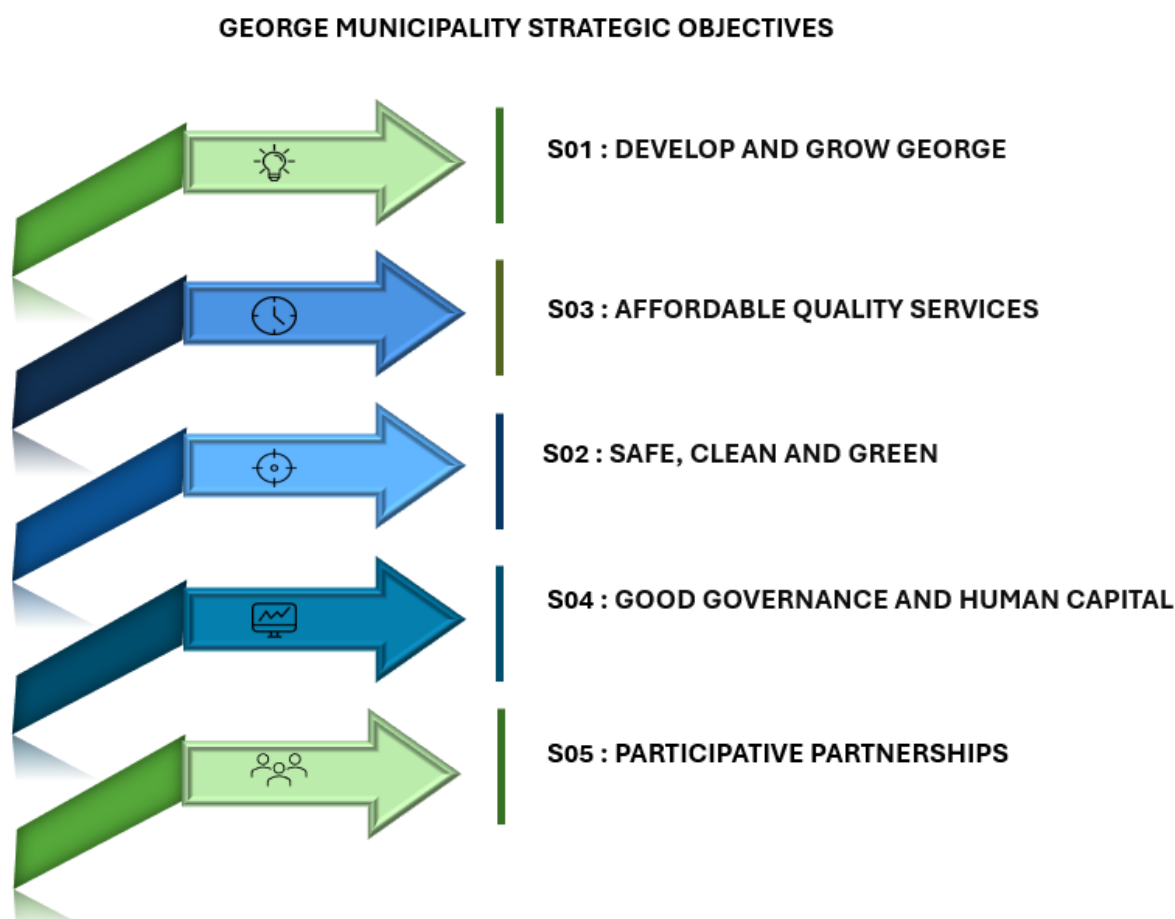

As a municipality, we will strive to deliver excellent services for all areas within the greater George.

Values

3.2 Municipal Strategic Objectives

The strategic objectives within a municipality are the building blocks of the Council's strategy. The strategic objectives as depicted in the diagram below illustrate the expansion of the vision statement and create structure around how the municipality will achieve its strategic goals. The SDBIP is developed in a more detailed way to indicate the deliverables against the activities that should be met in a certain timeframe.

Figure 21: Strategic Objectives

3.2.1 Strategic Objective 01: Develop and Grow George

The **National Outcome** associated with SO1, is **to have decent employment through inclusive growth**. The **National Key Performance Area** recognised Local Economic Development which is addressed through the **Municipal Key Performance Area -Local Economic Development**. The strategic objective to be met is to **Develop and Grow George**.

To grow the local economy of George, the Municipality must create an enabling environment which will attract investment into the area.

It needs to target the service economy to diversify its economic base and strengthen those sectors that living up to its potential. This will stimulate economic activity and result in new business sales and job creation to alleviate poverty. The aim is to ensure that an annual growth rate of 8% is achieved. It is just as important to focus on retaining and expanding established businesses and re-instilling investor confidence in the George Municipal area. This will be done through business retention and expansion strategies that inter alia facilitate development in targeted areas identified in the MSDF. For the economy to grow, it is essential that the correct infrastructure is in place to accommodate current and attract new business activities.

Therefore, investment in maintaining and upgrading existing infrastructure and developing new infrastructure where opportunities can be unlocked and improved efficiency can be achieved, must be a primary focus for the next 10 to 15 years. The leading sectors, such as the Finance and Business services sector, need to be stimulated to strengthen George's position as a regional services hub in the Garden Route and Klein Karoo area. Sector strategies need to be developed to ensure an enabling environment is created through economic stimulation to promote agro-processing which is linked to the manufacturing sector as well as tourism development, specifically for the sports and business tourism industry.

The natural and agrarian assets of the municipal area have vast potential to generate revenue and employment opportunities. Facilitation of growth and investment in the agricultural sector will not only secure sustainable employment in the primary sector but also support the national and provincial mandates to promote food security. It is essential to retain the value and attraction of these assets that can contribute to the growth in George's tourism and agricultural sectors. Due to the importance of the educational facilities such as NMMU and South Cape College, promotion and improving education needs to be a strategic priority toward retaining youth and building local knowledge and skills that would serve to grow our economy and embed excellence in the services offered from the municipal area, thereby growing our status and good reputation as regional service centre.

George is also becoming an important role-player in the green industry relating to solar energy and other green industries which promote clean manufacturing principles. This provides an opportunity for George to become a national benchmark and trailblazer for secondary cities. Local communities, situated south of the N2, which represent the most vulnerable and poorer urban communities of George, remain separated from facilities and employment opportunity. Through the Neighbourhood Development Partnership programme, special investment opportunities have been identified in Thembaletu, which is the most populous suburb south of the N2. Continued efforts need to be made to attract suitable investors to grow the local nodes and diversify the local economy through a blend of formal and informal economic development with a unique niche. In addition, planning has been undertaken whereby access to places of employment and integration will be improved for the communities south of the N2 through new road linkages.

This will bring employment and investment opportunities closer to the urban poor and unlock opportunities to improve access and mobility to and from the local area. By growing and including nodes south of the N2 into the economic fabric of George the economic base of George becomes more inclusive, is broadened and its position as a regional service centre will be strengthened.

The Municipality faces challenges with the implementation of the strategic objective to develop and grow George namely:

- Revitalising the Central Business District.
- Re-instill and maintain investor and consumer confidence.
- Job creation through the Expanded Public Works Programme (EPWP).
- Undoing the segregated spatial legacy that former regimes have left.
- Safeguarding natural and agrarian assets amidst development pressures.

As the aforementioned is a key priority of economic development the municipality aims to maintain an annual growth rate of 8% as well as a municipal environment that is conducive to economic development. The municipality has therefore linked the challenges in this regard to the strategic risk of increased indigents and poverty:

Table 12: Predetermined objectives SO1

Predetermined Objectives	PDO 1.1	To create and facilitate an enabling environment for economic development in George
	PDO 1.2	To ensure the development of participatory, practically implementable economic development and business retention and expansion strategies
	PDO1.3	To ensure that industry support is focused on high-growth potential areas, with high job absorption ratios
	PDO 1.4	To leverage construction industry potential through strategic housing-related projects
	PDO 1.5	To focus on building a revitalised and interactive CBD through a City Improvement District
	PDO 1.6	To establish incubators, clusters and centers of excellence to contribute meaningfully to the demands of a growing economy
	PDO 1.7	Red-tape reduction at all administrative levels
	PDO 1.8	To ensure that Spatial Development Framework encourages sustainable development
	PDO 1.9	To maximise job creation opportunities through government expenditure (e.g. EPWP)
	PDO 1.10	To establish a Science Park
	PDO 1.11	To swap strategic land and buildings with other government departments to unlock economic potential
	PDO1.12	To promote George as a sports tourism and business destination
	PDO 1.13	To identify an educational and research hub and to facilitate the continued growth of NMMU in George
	PDO 1.14	To improve planning and regulatory frameworks to encourage job-creation

Table 13: SO1: Alignment With District, Provincial, National Strategies and Global Strategic Goals

Alignment With District, Provincial, National Strategies and Global Strategic Goals					
Garden Route District Municipality Strategic Objectives	Medium Term Strategic Framework	National KPA	National Outcomes & National Development Plan (Vision 2030)	Provincial Vision Inspired Priorities	Sustainable Development Goals
SO1: A skilled Workforce SO5: Growing an inclusive district economy.	Economic transformation and job creation (2)	NKPA3: Local Economic Development	Ensuring decent employment through inclusive economic growth (4)	VIP2: Growth and Jobs	Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all (8)

3.2.2 Strategic Objective 02: Safe, Clean and Green

One of the biggest assets which George possesses is a beautiful and safe living environment. The quality of lifestyle which is offered in the George area is a key selling factor to attract investment. It is essential that efforts are made which will ensure that George is kept clean by ensuring that on-going efforts are made to employ more unskilled labour using the EPWP programme to clean the CBD and various other areas which are of strategic importance.

Crime prevention can also be addressed through urban design and the creation of integrated, legible public places, which simultaneously contribute to urban upgrade. Scope for such initiatives exist in the Central Business District and in Thembaletu, where frameworks for restructuring have already been drafted. This also relates to environmental protection and rehabilitation of rivers and beaches etc. With the adoption of an amended Integrated Zoning Scheme Bylaw, the Municipality has incorporated relevant environmental policy from the MSDF as parameters in the zoning scheme. By mainstreaming the requirements for

protection of natural areas and watercourses, the municipality has ensured that all construction activities abides by the policy principles related to safeguarding our natural assets and preserving our green environment.

To keep George safe, it is essential that security and law enforcement staff are adequately staffed, capacitated and equipped with the resources needed to effective law enforcement and crime prevention. Alongside this, firm partnerships with local neighbourhood patrols and the SAPS will enable more efficient policing across the municipal area, including public places such as schools and low-income areas where the most vulnerable citizens reside.

The National Outcome associated with SO2, is to have an effective, competitive and responsive economic infrastructure network and the protect and enhance environmental assets and natural resources. The National Key Performance Area recognises Basic Service Delivery which is addressed through the Municipal Key Performance Area - Basic Services. The strategic objective to be met is to have a safe, clean and green George.

The Municipality faces challenges with the implementation of the strategic objective Basic Service Delivery namely:

- Maintenance and cleaning of the physical environment.
- Greening the city
- Build on current recycling initiatives
- Meaningful reduction in waste levels
- Reduction of crime levels

There is a two-pronged approach in prioritising the areas of Waste Management and Environmental Sustainability and Safety to bring to fruition the municipal objective.

Table 14: Predetermined objectives SO2

Predetermined Objectives	PDO 2.1	Waste Management	To provide an integrated waste-management service for the total municipal area
	PDO 2.2		To provide basic services to informal settlements that comply with the minimum standards
	PDO 2.3		To build on current recycling initiatives and secure a meaningful reduction in waste levels
	PDO 2.4		To maintain and improve on blue and green drop status in water and sewage services by the retaining of capacity and the further improvement of capacity
	PDO 2.5		To build on the current waste co-operative governance relationship
	PDO 2.6	Environmental Sustainability and Safety	To ensure that maintenance and cleaning within the physical environment remains of the highest standard
	PDO 2.7		To ensure the development of a desirable and quality living environment that fosters the safety and welfare of the community concerned, preserves the natural and cultural environment, and does not impact negatively on existing rights
	PDO 2.8		To develop a focused strategy on greening the city
	PDO 2.9		To increase the roll-out and maintenance of streetlights for improved safety
	PDO 2.10		To provide an effective and efficient law-enforcement and emergency service to all the communities of George in our quest to protect and promote the fundamental rights of life

Table 15: SO2: Alignment With District, Provincial, National Strategies and Global Strategic Goals

Alignment With District, Provincial, National Strategies and Global Strategic Goals					
Garden Route District Municipality Strategic Objectives	Medium Term Strategic Framework	National KPA	National Outcomes & National Development Plan (Vision 2030)	Provincial Vision Inspired Priorities	Sustainable Development Goals
SO2: Bulk Infrastructure and Co-ordination	Social cohesion and safe communities (6)	NKPA1: Basic Service Delivery	Ensuring that the environmental assets and natural resources are well protected and continually enhanced (10)	VIP 1: Safe and Cohesive Communities	Take urgent action to combat climate change (13)
	Spatial integration, human settlements and local government (5)		Ensuring vibrant, equitable and sustainable rural communities with food security for all (7)	VIP4: Mobility and Spatial Transformation	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss (15)
			Promoting sustainable human settlements and improved quality of household life (8)	VIP5: Innovation and Culture	Make cities and human settlements inclusive, safe, resilient and sustainable (11)

3.2.3 Strategic Objective 03: Affordable Quality Services

It is essential that all citizens in George have access to basic services as provided by local government. Access to basic services by all citizens should be 100%. All service-delivery constraints need to be mitigated. It is also essential that the municipality ensures that strategic measures are in place to manage risk areas for service delivery such as shortage of electricity and water, and that the green industry is stimulated to increase recycling practices and water- and electricity- saving practices are encouraged.

Service delivery also needs to be improved regarding low-cost housing and the provision of GAP housing. The Council needs to make land available for developers to ensure that more affordable housing is made available as the demand for housing is still much more than the supply especially for the low-income earning population.

The National Outcome associated with SO3, is to have a responsive, and accountable, effective and efficient local government system, have sustainable human settlements and improved quality of household life, have an effective, competitive and responsive economic infrastructure network which protects and enhances environmental assets and natural resources. The National Key Performance Area Basic Service Delivery which is addressed through the Municipal Key Performance Area -Basic Service Delivery. The strategic objective to be met is to have affordable quality services for the citizens of George.

In a dynamic municipal environment such as George, various service delivery challenges are experienced, such as:

- Service-delivery backlogs (e.g. shortage of electricity, water etc.);
- Satisfying the demand for and provision of low-cost housing and GAP housing.;
- Ensuring the sustainability of the Integrated Public Transport Network;
- Access to grant funding for prioritised capital projects;
- Improve the condition of roads; and

■ Availability of funds

Therefore, the municipality has set out to address these **challenges** through its designated predetermined objectives, which are prioritised through the following areas: Wastewater Management, Water, Stormwater, Infrastructure and effective service delivery, protection services, electricity and housing. The **outcome** is to ensure all citizens have access to basic services, have all service-delivery constraints mitigated, have green industry that is stimulated by increased recycling practices, have improved water and electricity practices, have increased housing opportunities and municipal wide improved quality of service-delivery standards.

The aforementioned are all linked to **identified strategic risks** relating to inadequate standards of service, maintenance of infrastructure and inefficient investment and capital expenditure.

Table 16: Predetermined objectives SO3

Predetermined Objectives	PDO 3.1	Waste Management	To provide and maintain safe and sustainable sanitation management and infrastructure
	PDO 3.2		Accelerated delivery in addressing sanitation backlogs
	PDO 3.3		To provide basic services to informal settlements that comply with the minimum standards
	PDO 3.4		To enhance the quality of sanitation
	PDO 3.5	Water	To provide world-class water services in George to promote development and fulfil basic needs
	PDO 3.6		To provide basic services to informal settlements that comply with the minimum standards
	PDO 3.7		To improve service delivery practices
	PDO 3.8	Stormwater	To endeavor to improve the road-resealing project to such an extent that potholes are prevented altogether
	PDO 3.9		To provide a reliable storm water network
	PDO 3.10	Infrastructure and Effective Service Delivery	To ensure infrastructure planning and development keeps pace with growing city needs by aligning all strategic documents and efforts.
	PDO 3.11		To identify and access grant funding for prioritised capital projects
	PDO 3.12		To ensure proper asset management by providing sufficient funding and operating capacity for maintenance of existing infrastructure.
	PDO 3.13		To explore and implement measures to preserve resources and ensure sustainable development
	PDO 3.14		To focus on the new wards (DMA) as a priority area for service delivery for the rural areas which are relevant to their unique environment
	PDO 3.15	Protection Services	To provide world-class transport routes and functional streets safe for all modes of transport
	PDO3.16		To implement an Integrated Public Transport Network that will serve the communities of George
	PDO 3.17	Electricity	To provide sufficient electricity for basic needs
	PDO 3.18		To promote additional energy-saving initiatives
	PDO 3.19		To provide basic services to informal settlements to comply with the minimum standards
	PDO 3.20		To improve service delivery practices
	PDO 3.21	Housing	To provide for the needs of the homeless by providing safe integrated human settlements
	PDO 3.22		To investigate the need, feasibility, desirability and location issues regarding rural

			housing delivery
	PDO 3.23		To accelerate delivery in addressing housing
	PDO 3.24		To increase GAP Housing

Table 17: SO3: Alignment With District, Provincial, National Strategies and Global Strategic Goals

Alignment With District, Provincial, National Strategies and Global Strategic Goals

SO2: Bulk Infrastructure Co-ordination					
SO3: Financial Viability	Social cohesion and safe communities (6)	NKPA1: Basic Service Delivery	Ensuring all people in South Africa are and feel safe (3)	VIP1: Safe and Cohesive Communities.	SDG9: Industry, Innovation and Infrastructure
SO5: Growing and inclusive District Economy					

3.2.4 Strategic Objective 04: Participative Partnerships

Ensure all members of public, organised business and other organisations can participate in the decision-making process. It is of the utmost importance that a culture of participation is nurtured. Therefore, it is essential that a customer care system is in place regarding a call centre.

It is essential that the public and private sector organisations play a more active role in the decision-making process and a platform must be established whereby public participation at various levels of government is a reality. Therefore, partnerships need to be fostered at all levels of government. As part of this goal all public facilities such as community halls and multipurpose centres need to be linked to strategic priorities where communities can be linked to government programmes using these facilities as a one-stop shop. They should be open 24 hours a day and linked via the telecommunications and internet networks to ensure that the public can engage with Government and can utilise the facilities in a more effective manner.

The National Outcome associated with SO4, is to have a development-orientated public service and inclusive citizenship. The National Key Performance Area recognised is Good Governance and Public Participation which is addressed through the Municipal Key Performance Area - Good Governance and Public Participation. The strategic objective to be met is to have participative partnerships within the Greater George Area.

There are challenges that impact on the quality of participation in George such as:

- Increase public inputs in strategic decision-making.
- Increase partnerships with different stakeholders to strengthen the public-private partnerships in George;
- Bi-annual community satisfaction survey; and
- Ward-Based planning in all wards

With continued communication and participation these challenges will receive priority attention. The outcome of these efforts aims to see strategic decisions being influenced by public input and having effective internal and external communication throughout the Municipality. The municipality has also linked this as a strategic risk of community dissatisfaction.

Table 18: Predetermined objectives SO4

Predetermined Objectives	PDO 4.1	To establish a Call Centre and free hotline number
	PDO 4.2	To increase public inputs in strategic decision-making, using the participatory appraisal of competitive advantage (PACA) process
	PDO 4.3	To increase different partnerships with different stakeholders to strengthen the public private partnerships in George
	PDO 4.4	To revitalise the current community facilities to increase the access to services for the public
	PDO 4.5	To undertake regular human resource audits to determine skills gaps, staff diversity and develop skills programmes
	PDO 4.6	To implement bi-annual community satisfaction poll
	PDO 4.7	To improve communication with citizens on plans, achievements, successes and actions
	PDO 4.8	To establish dedicated and knowledgeable service desks with time-bound response times to complaints
	PDO 4.9	To implement ward-based planning for each of the 28 wards in the George Municipality
	PDO 4.10	A monitoring and evaluation framework needs to be implemented to empower the ward committees to track the progress of the municipality regarding the implementation of actions to meet the needs of each ward

Table 19: SO4: Alignment With District, Provincial, National Strategies and Global Strategic Goals

Garden Route District Municipality Strategic Objectives	Medium Term Strategic Framework	National KPA	National Outcomes & National Development Plan (Vision 2030)	Provincial Vision Inspired Priorities	Sustainable Development Goals
SO4: Good Governance	Education, skills, health	NKPAS: Good Governance and Public Participation	Setting up an efficient, competitive and responsive economic infrastructure	VIP2: Growth and Jobs	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all (4)
SO5 Growing and inclusive District economy	A capable, ethical and developmental state		Providing improved quality of basic education (1)	VIP3: Empowering People	Ensure healthy lives and promote well-being for all at all ages (3)
			Enabling a long, healthy life for all South Africans (2)		Build resilient infrastructure, promote inclusive and sustainable industrialization and foster.

3.2.5 Strategic Objective 05: Good Governance and Human Capital

This objective is based on ensuring that good governance is key and free of corruption to ensure the city is run as effectively and efficiently as possible.

The Municipality should be managed as transparently as possible at all levels. This relates directly to the financial sustainability of the municipality. It is essential that financial discipline is upheld to obtain clean audits from the Auditor General. The financial sustainability also needs to incorporate financial planning for future revenue streams and ways to increase the business activity in the city without increasing the tax burden which deters economic growth. Strategic planning needs to be done to find the correct ways to attract and retain business without over-burdening the current tax base.

The second important priority for this objective is to establish a municipal organisation which is productive, based on the correct skills, required competency levels and human resource capacity in all the departments. The focus should be on outcomes achieved by department regarding specific KPIs linked to the IDP must guide their performance to ensure that the departments' output is strategic in nature. The report-back system regarding departmental progress should be redesigned to ensure that the public can monitor and evaluate the progress being made about the IDP projects and programmes.

The National Outcome associated with SO5, is have a skilled and capable workforce to support inclusive growth and have a responsive and accountable, effective and efficient local government system. The National Key Performance Area recognised is Municipal Transformation and Institutional Development as well as Municipal Financial Viability and Management which is addressed through the Municipal Key Performance Area-Municipal Transformation and Institutional Development as well as Municipal Financial Viability and Management. The strategic objective to be met is to have a municipality that has transformation and institutional development at heart of its operations and have financially viable organisation.

The associated challenges that face the municipality is:

- Comprehensive audit of operations, processes, duties and service-delivery standards of Directorates.
- Realignment of organisational structure to be more responsive to community needs;
- Ensure viable financial management and control.
- Implement the Long-Term Financial Plan; and
- Functional structures and committees of Council

The municipality aims to address the challenges to allow for an administration that is free of corruption, have a municipal environment that is financially viable, maintain clean-audit statuses and have a municipality that is performance driven.

The municipality has also identified strategic risks such as financial viability, deficiencies in staff skills and capacity, poor levels in compliance, weakness in governance and accountability and the failure and non-integration of its IT systems.

Table 20: Predetermined objectives SO5

Predetermined Objectives	PDO 5.1	Budget and Treasury	To develop mechanisms to ensure viable financial management and control
	PDO 5.2		To maintain effective credit control in the Municipality and enhance and maximise revenue base through improved collection rate
	PDO 5.3		To re-align expenditure on non-income producing and support services
	PDO 5.4		To improve contracts management, specifically to address financial implications
	PDO 5.5		To manage the municipal finances according to the Municipal Finance Management Act in an effective and efficient manner

	PDO 5.6	Effective Internal Service Delivery	To ensure proper asset management by implementing standard asset management operating procedures
	PDO 5.7		To realign the organisational structure to be more responsive to community needs, more service and efficiency orientated and to fulfil the goals identified in the 5-year plan
	PDO 5.8		To maximise the use of technology to improve service delivery
	PDO 5.9		To ensure that municipal staff are efficient, effective and responsive.
	PDO 5.10		To boost internal capacity by starting a graduate's programme and employing students graduating from universities who are seeking first-time employment at a much lower remuneration cost for each department. Also, utilise interns in the different departments by requesting financial support from Garden Route District Municipality which subsidises half of the interns' salaries.
	PDO 5.11	Integrated Development Planning and Performance Management	To ensure effective integrated development planning and performance management in the municipality
	PDO 5.12		To implement a ranking and rating system for all new capital projects to support the strategic objectives and priorities of Council and communities.
	PDO 5.13		To implement Performance Management system with realistic stretch target setting in each department.
	PDO 5.13		To undertake strategic planning to address service delivery challenges in coordinated manner
	PDO 5.14	Risk Management	To evaluate the effectiveness of risk management, control and governance processes and develop actions to address key risks identified
	PDO 5.15		To take all possible steps to ensure that the municipality is clean and corruption free.
	PDO 5.16		To conduct a full audit of operations, processes, duties and service-delivery standards of departments to address risk areas and promote effectiveness.

Table 21: SO5: Alignment With District, Provincial, National Strategies and Global Strategic Goals

			Enabling a long, healthy life for all South Africans (2)		Build resilient infrastructure, promote inclusive and sustainable industrialization and foster

3.3 Universal Policy Direction

Strategic planning for the George Municipality does not take place in a vacuum. There are many different major policy directives

used, ranging from more general directives applicable to the municipality and its neighbouring municipalities to more focused directives with a specific mandate. When determining future strategic planning and resource allocation, all of these directions are taken into account. The sections that follow provide an overview of the primary policy guidelines that the George Municipality's 5th Generation IDP 2022–2027 took into account.

3.3.1 Sustainable Development Goals (SDGs)

The Sustainable Development Goals (SDGs), also known as the Global Goals, were adopted by the United Nations in 2015 as a universal call to action to end poverty, protect the planet, and ensure that by 2030 all people enjoy peace and prosperity.

The SDGs balance the three facets of sustainable development—economic, social, and environmental—and are interconnected and unbreakable. The objectives are as follows:

3.3.1.1 Sustainable Development Goals (SDGs) 2030

Goal 1: End poverty in all its forms everywhere.

Goal 2: End hunger, achieve food security and improved nutrition, and promote sustainable agriculture.

Goal 3: Ensure healthy lives and promote well-being for all ages.

Goal 4: Ensure inclusive and equitable quality education and promote life-long learning opportunities for all.

Goal 5: Achieve gender equality and empower all women and girls.

Goal 6: Ensure availability and sustainable management of water and sanitation for all.

Goal 7: Ensure access to affordable, reliable, sustainable, and modern energy for all.

Goal 8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialisation, and foster innovation.

Goal 10: Reduce inequality within and among countries.

Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable.

Goal 12: Ensure sustainable consumption and production patterns.

Goal 13: Take urgent action to combat climate change and its impacts.

Goal 14: Conserve and sustainably use the oceans, seas, and marine resources for sustainable development.

Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat deforestation, halt and reverse land degradation, and halt biodiversity loss.

Goal 16: Promote peaceful and inclusive societies for sustainable development, to provide access to justice for all, and build effective, accountable and inclusive institutions at all levels.

Goal 17: Strengthen the means of implementation and revitalise the global partnership for sustainable development.

3.4 National Policy Direction

Through significant consultation and debate at both the ministerial and administrative levels, a set of twelve outcomes were produced based on the election manifesto and medium-term strategic framework of the National Government. Given the

government's policy aims listed below, these results represent the targeted development benefits sought nationally:

3.4.1 National Strategic Outcomes

Goal 1: Improved quality of basic education.

Goal 2: A long, healthy life for all South Africans.

Goal 3: All people in SA are and feel safe

Goal 4: Decent employment through inclusive economic growth.

Goal 5: A skilled and capable workforce to support an inclusive growth path.

Goal 6: An efficient, competitive and responsive economic infrastructure network.

Goal 7: Vibrant, equitable and sustainable rural communities with food security for all.

Goal 8: Sustainable human settlements and improved quality of household life.

Goal 9: A responsive, accountable, effective and efficient local government system.

Goal 10: Environmental assets and natural resources that are well protected and continually enhanced.

Goal 11: Create a better SA and contribute to a better and safer Africa and World.

Goal 12: An efficient, effective and development-oriented public service and an empowered, fair and inclusive citizenship.

3.4.2 National Development Plan (NDP) – 2030

The NDP aims to eliminate poverty and reduce inequality by 2030. According to the plan, South Africa can realise these goals by drawing on the energies of its people, growing an inclusive economy, building capabilities, enhancing the capacity of the state, and promoting leadership and partnerships throughout society.

3.4.2.1 Implementation Process

The strategy focuses on the essential skills required to transform society and the economy. These capacities are not automatic, and they won't develop if the nation keeps moving in the same direction. Time is of the importance, according to rising levels of frustration and dissatisfaction; failing to act will jeopardise democratic achievements. South Africa must specifically identify measures to quickly lower the alarmingly high rates of youth unemployment and provide young people more opportunity. Change is required during the next two decades in order to advance. The plan outlines six interconnected goals in light of the complexity of national development. The following objectives are found in chapter four (4) which relates to local government:

- Good Governance and Public Participation.
- Building Safer Communities
- Basic Service Delivery
- Building Safer Communities
- Local Economic Development (LED).
- Municipal Transformation and Institutional Development.

3.4.2.2 NDP Benchmarks

- Increase employment from 13 million in 2010 to 24 million in 2030.
- Raise per capita income from R50 000 in 2010 to R120 000 by 2030.
- Increase the share of national income of the bottom 40% from 6% to 10%.
- Establish a competitive base of infrastructure, human resources and regulatory frameworks.
- Ensure that skilled, technical, professional and managerial posts better reflect the country's racial, gender and disability makeup.
- Broaden ownership of assets to historically disadvantaged groups.
- Increase the quality of education so that all children have at least two years of preschool education and all children in grade 3 can read and write.
- Provide affordable access to quality health care while promoting health and wellbeing.
- Establish effective, safe and affordable public transport.
- Produce sufficient energy to support the industry at competitive prices, ensuring access for poor households, while reducing carbon emissions per unit of power by about one-third.
- Ensure that all South Africans have access to clean running water in their homes.
- Make high-speed broadband internet universally available at competitive prices.
- Realise a food trade surplus, with one-third produced by small-scale farmers or households.
- Ensure household food and nutrition security.
- Entrench a social security system covering all working people, with social protection for the poor and other groups in need, such as children and people with disabilities.
- Realise a developmental, capable and ethical state that treats citizens with dignity.
- Ensure that all people live safely, with an independent and fair criminal justice system.
- Broaden social cohesion and unity while redressing the inequities of the past.
- Play a leading role in continental development, economic integration and human rights.

3.4.3 Medium Term Strategic Framework 2019 – 2024 (MTSF)

The National Development Plan (NDP) 2030 will be implemented and monitored over the course of five years according to the high-level strategy document known as the MTSF. In order to set the nation on a successful course for achieving the 2030 goal, it defines the priorities to be pursued between 2019 and 2024. It specifies the results and monitoring indicators, as well as objectives for implementing the interventions and priorities throughout a five-year timeframe.

The COVID-19 pandemic outbreak and the proclamation of a National State of Disaster on March 15, 2020, however, prevented the MTSF 2019–2024 from being implemented as planned. In reaction to the epidemic, which has had a catastrophic effect on the health, social, and economic elements of South Africans' life, the government had to reprioritize its plans and expenditures. On October 15, 2020, the President unveiled the Economic Reconstruction and Recovery Plan (ERRP), which aimed to re-establish much-needed economic growth and jobs. The MTSF 2019–2024 required to be changed to include crucial interventions that are a part of the government's relief and recovery efforts as a result of the convergence of all these variables.

Additionally, the government's obligations to halt the coronavirus epidemic and strive toward recovery are given top priority in the Revised MTSF 2019–2024. These promises include eradicating the coronavirus epidemic, accelerating our economic recovery,

enacting economic reforms to foster inclusive growth and creating sustainable jobs, and, finally, combating corruption and enhancing the capacity of the state. These promises, which are part of the Revised MTSF 2019–2024, will serve as the focal point for the plans both yearly and strategic.

Through the three NDP pillars, the MTSF 2019–2024 seeks to address the issues of unemployment, inequality, and poverty.

The following priorities will be accomplished by more focused execution, coordination, and integration by the different governmental levels, including state-owned businesses, the private sector, and civil society:

- Priority 1: A capable, ethical and developmental state.
- Priority 2: Economic transformation and job creation.
- Priority 3: Education, skills and health.
- Priority 4: Consolidating the social wage through reliable and quality basic services.
- Priority 5: Spatial integration, human settlements and local government.
- Priority 6: Social cohesion and safe communities; and
- Priority 7: A better Africa and world.

3.4.4 National District Development Model and One Plan

The District Development Model (DDM) was approved by Cabinet as an All of Government and Society Approach, providing a means by which all three spheres of government and state entities work together to accelerate service delivery while ensuring that municipalities are supported and have access to sufficient resources. A multi-year planning and election cycle strategy, the DDM focuses on 44 districts and 8 metropolitan spaces for more efficient collaborative planning, budgeting, and execution. Even though each domain, sector, or institution has specific constitutional rights, obligations, and authorities, they all work together to coordinate planning, budgeting, and implementation procedures that support growth at the district and metropolitan levels.

The objectives of the DDM are to:

- Solve the silos at a horizontal and vertical level.
- maximise impact and align plans and resources at our disposal through the development of “One District, One Plan and One Budget”;
- narrow the distance between people and government by strengthening the coordination role and capacities at the district level;
- ensure inclusivity through gender-responsive budgeting based on the needs and aspirations of our people and communities at a local level;
- build government capacity to support to municipalities;
- strengthen monitoring and evaluation at district and local levels;
- implement a balanced approach towards development between urban and rural areas;
- ensure sustainable development whilst accelerating initiatives to promote poverty eradication, employment and equality; and
- exercise oversight over budgets and projects in an accountable and transparent manner. Nationally, the DDM is expressed through the development of a One Plan. The One Plan is defined as an intergovernmental plan setting out a 25–30-year long-term strategic framework (consisting of short, medium and long-term actions) to guide investment and delivery about each

of the districts and metropolitan spaces. This plan for each space is to be jointly developed and agreed to by all three spheres of government.

3.4.5 Integrated Urban Development Framework (IUDF)

According to the National Development Plan (NPD), more functionally linked, balanced, and energetic urban settlements should be created in South Africa by the year 2030. The Department of Cooperative Governance created the Integrated Urban Development Framework (IUDF) to reform and reorganise South Africa's urban areas in order to achieve this aim. This framework was created in partnership with other national departments and other role-players.

The IUDF seeks to drive the creation of inclusive, robust, and liveable urban settlements while specifically addressing the special circumstances and difficulties that South Africa's cities and towns face.

The integration of the aforementioned IUDF strategic goals into municipal development planning instruments like the Spatial Development Framework (SDF) and Integrated Development Plan will determine how effectively the nine (9) policy levers are implemented (IDP).

3.4.6 National Spatial Development Framework (NSDF)

The NSDF was Gazetted on 01 February 2023. This National Spatial Development Framework (NSDF), the first of its kind, seeks to make a bold and decisive contribution to bringing about the peaceful, prosperous and truly transformed South Africa, as articulated in the Freedom Charter, the Reconstruction and Development Programme and the National Development Plan. It does so in full recognition of:

- The stranglehold that the unjust national spatial development paradigms, logics and patterns of the past have placed on our many attempts at breaking the back of poverty, unemployment and inequality;
- The valuable, and often hard lessons we have learnt over the last twenty-seven years in our pursuit of national reconstruction, inclusive economic growth and spatial transformation; and
- The necessity for decisive, collaborative and targeted State action in national space, to drive our country towards the shared, inclusive and sustainable future we desire and require.

3.4.6.1 National Transformation Logic

A key driver in the NSDF's theory of change is the move from a National Spatial Development Logic based on, and in service of the colonial and Apartheid National Development Paradigms, to one based on and in service of a Post- Apartheid National Development Paradigm. In this regard, it is framed and guided by:

- The NDP targets, strategic levers and strategic policy direction

Figure 22: Five Normative Principles (SPLUM)

3.4.6.2 NSDF's Theory of Change

Step 1: The existing national development paradigm, including the Constitution, the NDP and the existing legal and policy framework, notably SPLUMA and the IUDF, is used to:

- Articulate a compelling and persuasive post-Apartheid spatial development logic and identify the 'shifts' from the old
- and existing logics that this new logic requires; and
- Craft a strong and credible post-Apartheid national spatial development vision

Step 2: The new logic and vision is used together with an analysis of the current and unfolding 'national spatial development landscape', to develop a set of national spatial development levers and craft a desired post-Apartheid national spatial development pattern.

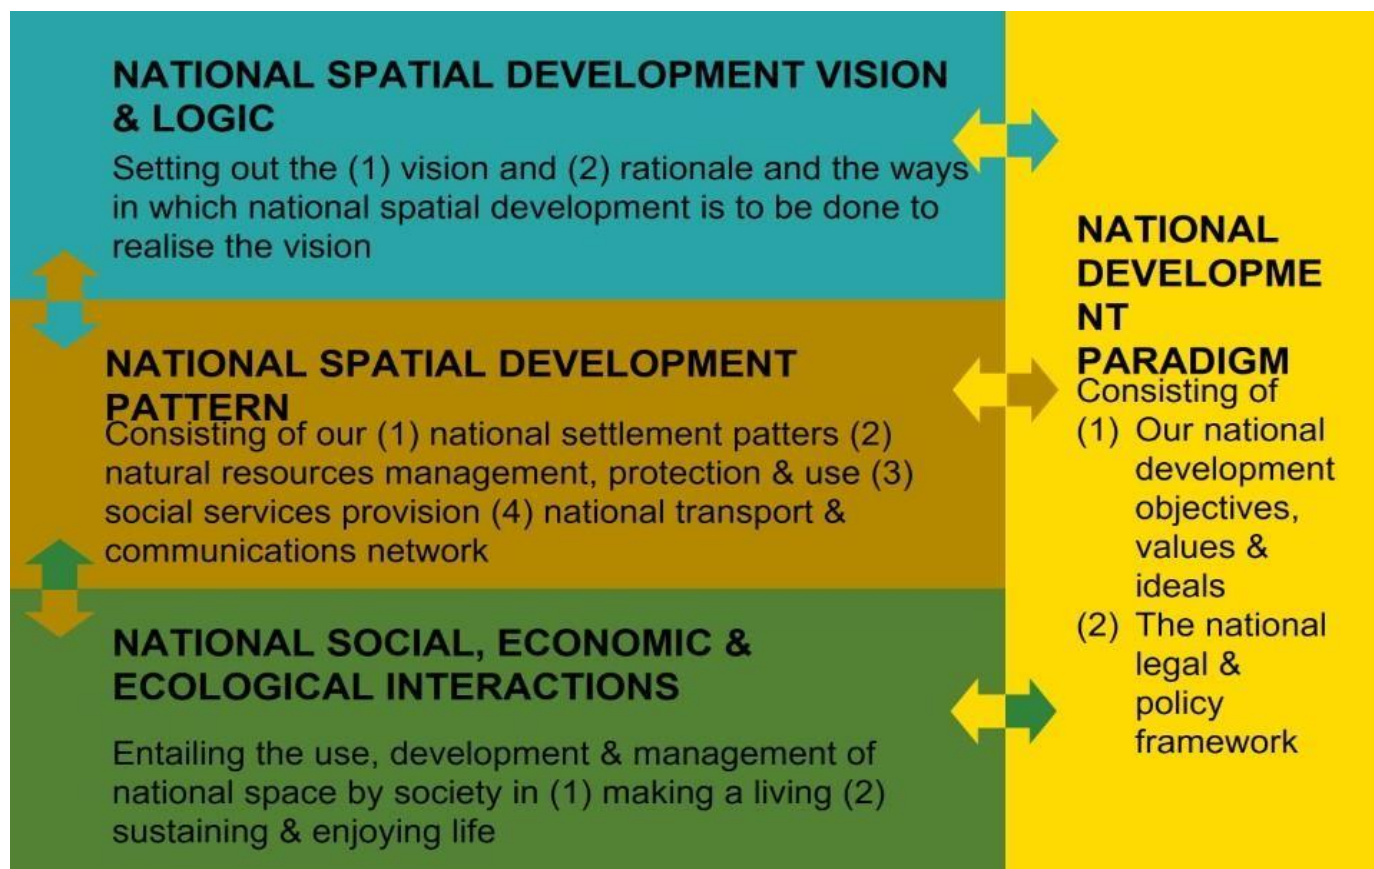

Step 3: The post-Apartheid national spatial development pattern is used to indicate what actions, interventions and priority actions are required to ensure a transition to this desired pattern.

Step 4: The post-Apartheid national spatial development pattern and interventions and priority actions are used to prepare clear implementation guidance for realising the desired national spatial transformation.

Step 5: The spatial development guidance, tasks and actions as set out in the NSDF are implemented, and (1) movement towards the realisation of the desired post-Apartheid national spatial development pattern monitored and assessed by a joint intergovernmental structure, and (2) corrective measures taken as and where required.

3.5 Provincial Policy Direction

3.5.1 The Western Cape Government Provincial Strategic Plan 2019 – 2024

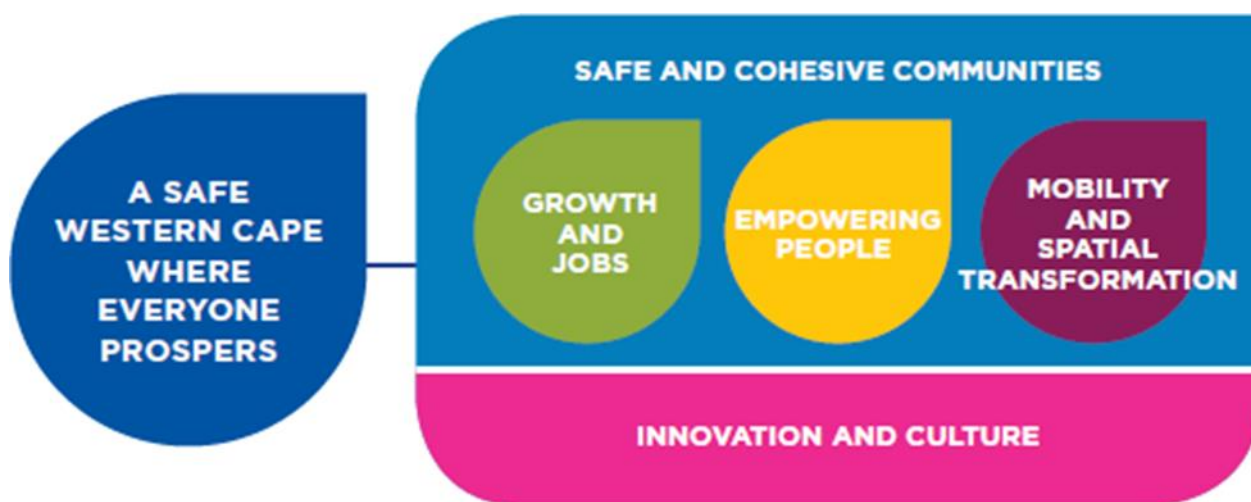

Through the newly approved Vision Inspired Priorities (VIPs), the Western Cape Provincial Government (WCG) vowed to create a values-based competent state that fosters opportunity and encourages responsibility in a safer Western Cape.

The VIPs are as follows:

- Safe and Cohesive Communities (VIP 1);
- Growth and Jobs (VIP 2);
- Empowering People (VIP 3);
- Mobility and Spatial Transformation (VIP4); and
- Innovation and Culture (VIP 5).

Figure 23:

Figure 16: WCG: Vision Inspired Priorities (VIPs)

3.6 The Garden Route District Municipality (GRDM) Strategic Focus

The Garden Route District Municipality has set the following strategic objectives for their District:

Table 22: GRDM Strategic Objectives 2022-2027

SO	Strategic Objective 2022 – 2027
SO 1	A Skilled Workforce and Communities
SO 2	Bulk Infrastructure Co-ordination
SO 3	Financial Viability& Sustainability
SO 4	Good Governance.
SO5	Growing an inclusive district economy.
SO6	Healthy and socially stable communities
SO7	Sustainable Environmental Management and Public Safety.

3.7 Local Policy Direction

3.7.1 George Municipality

The table below indicates how the municipality's strategic objective is aligned to National, Provincial and District Plans

Table 23: Horizontal Alignment Matrix

Strategic Focus Areas (SFAs)	Sustainable Development Goals (SDGs)	National Strategic Outcomes	Medium Term Strategic Framework	Western Cape Provincial Government Strategic Plan	GRDM Strategic Objectives
SO1- Develop and Grow George	Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all (8)	Ensuring decent employment through inclusive economic growth (4)	Economic transformation and job creation (2)	Growth and Jobs (VIP 2)	A skilled workforce Growing inclusive district economy
SO 2- Safe, Clean and Green	Take urgent action to combat climate change (13) Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss (15)	Ensuring that the environmental assets and natural resources are well protected and continually enhanced (10)	Social cohesion and safe communities (6) Spatial integration, human settlements and local government (5)	Empowering People (VIP 3)	Healthy and socially stable communities Sustainable Environmental Management
	Make cities and human settlements inclusive, safe, resilient and sustainable (11)	Ensuring vibrant, equitable and sustainable rural communities with food security for all (7) Promoting sustainable human settlements and	Social cohesion and safe communities (6)	Mobility and Spatial Transformation (VIP 4)	Promoting sustainable infrastructure services and transport system which fosters social and economic opportunities.
SO 3- Affordable Quality Services	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels (16)	Ensuring all people in South Africa are and feel safe (3)	Social cohesion and safe communities (6)	Safe and Cohesive Communities (VIP 1)	Bulk Infrastructure Co-ordination Healthy and socially stable communities
SO 4- Participative Partnerships	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all (4) Ensure healthy lives and promote well-being for all at all ages (3)	Providing improved quality of basic education (1) Enabling a long, healthy life for all South Africans (2)	Education, skills and health (3)	Growth and Jobs (VIP 2)	Good Governance. Healthy and socially stable communities
	Build resilient infrastructure, promote inclusive and sustainable industrialisation and foster innovation (9)	Setting up an efficient, competitive and responsive economic infrastructure	A capable, ethical and developmental state (1)	Empowering People (VIP 3)	Healthy and socially stable communities

Strategic Focus Areas (SFAs)	Sustainable Development Goals (SDGs)	National Strategic Outcomes	Medium Term Strategic Framework	Western Cape Provincial Government Strategic Plan	GRDM Strategic Objectives
SO 5- Good Governance and Human Capital	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels (16)	Achieving an accountable, effective and efficient local government system (9) Creating a better South Africa and a better and safer Africa and the world (11) Building an efficient, effective and development-oriented public service and an empowered fair and inclusive citizenship (12)	A capable, ethical and developmental state (1) Education, skills and health (3) Social cohesion and safe communities (6)	Innovation and Culture (VIP 5)	Good Governance.
		Achieving a responsive, accountable, effective and efficient local government system (9)	A capable, ethical and developmental state (1)	Embed good governance and integrated service delivery through partnerships and spatial alignment (5)	Healthy and socially stable communities

3.8 Garden Route District Projects

District Projects for consideration for B municipalities to include in their 2022-2027 IDPs:

Vision: Garden Route, the leading, enabling and inclusive district, characterised by equitable and sustainable development, high quality of life and equal opportunities for all.

Strategic Objective:

- Strategic Objective 1 A Skilled Workforce and Communities
- Strategic Objective 2 Bulk Infrastructure Co-ordination
- Strategic Objective 3 Financial Viability & Sustainability
- Strategic Objective 4 Good Governance.
- Strategic Objective 5 Growing an inclusive district economy.
- Strategic Objective 6 Healthy and socially stable communities
- Strategic Objective 7 Sustainable Environmental Management and Public

The Garden Route District Municipality have identified the projects listed below through their Growth and Development Strategy (GDS) in collaboration with the local municipalities within the district.

3.8.1 Regional Landfill Site

The Garden Route District Municipality's (GRDM) waste management functions and powers are set out in Section 84(1)(e) of the Municipal Structures Act, Act 117 of 1998. The core district waste management functions are the determination of a district waste disposal strategy, regulation of waste disposal, and the establishment, operation and control of waste disposal sites, bulk

waste transfer facilities and bulk disposal facilities servicing more than one local municipality in the district. GRDM must promote bulk infrastructural development and services for the district and build capacity of local municipalities where such capacity is lacking.

GRDM is fulfilling its mandate with the commencement of the construction of the Garden Route Regional Waste Management Facility for the provision of waste disposal services for the Local Municipalities of Bitou, Knysna, George and Mossel Bay. The abovementioned Local Municipalities are currently disposing of their domestic waste at the PetroSA private landfill site in Mossel Bay, which has reached full capacity.

GRDM's strategic planning is committed to the regionalization of integrated waste management and minimisation services as advocated by the Provincial Department of Environmental Affairs & Development Planning and the National Waste Management Strategy, 2020.

GRDM's Integrated Waste Management Plan has identified seven goals, which was informed by the situation analysis and gap and needs assessment. The following GRDM goals are aligned with the Provincial and National waste management goals.

- Effective waste information management and reporting
- Improved institutional functioning and capacity
- Improved waste education and awareness
- Provision of efficient and financially viable waste management services
- Increased waste minimisation and recycling
- Improved compliance and enforcement
- Improved future planning

The establishment of the Regional Waste Management Facility and the implementation of GRDMs Waste Minimisation Plan are projects identified under the Circular Economy Cluster within the Garden Route Growth & Development Strategy.

IDP Strategic Objective GDS Strategic Priority	Bulk Infrastructure Coordination/Sustainable Environmental Management and public safety Circular Economy
Objective	Develop a regional waste management facility that meets the immediate need for landfill space, while supporting green/circular economy objectives onsite and in distributed initiatives within the local municipalities.
Project goals/Outputs	<ul style="list-style-type: none"> ■ Accommodate approximately 8 500 tons of domestic waste generated per month in the municipal areas of Bitou, Knysna, George and Mossel Bay. ■ Other infrastructure includes roads, stormwater pipelines, a leachate storage dam, a contaminated stormwater dam, offices, a hazardous waste cell, waste tyre facility, a laboratory, a weighbridge, fencing and security infrastructure.
Status	A contractor has been appointed and the construction of the Regional Waste Management Facility is in progress.
Time Frame	2023 – 2025
Funding Required/Cost	R288 821 851.00 (Excl. VAT)
Funding Source	The GRDM has raised debt finance to fund the construction of the facility. Cost recovering tariffs will be charged to the users of the landfill.

3.8.2 Skills Mecca

The updated Skills Mecca resolutions for the Garden Route region as of July 2023 are:

1. Continue and accelerate collaboration, cooperation and integration among all District skills development role players.

2. Ensure that Skills Development leverages digital infrastructure as far as possible to ensure learning and processes methods are and remain innovative.
3. As far as possible link Skills Development to Investment and Economic Development opportunities to the advancement for all.
4. Ensure that all Skills Development processes in the Garden Route always proactively considers renewable energy.
5. Engage with all willing partners, in particular the SETAs, the National Skills Fund, Business Chambers and Employers
6. to implement projects across the District.
7. Consider and leverage local skilled people, including retired people, within the District, to accelerate the growth of the Skills Mecca.
8. All public and / or private skills development providers that comply with Skills Mecca requirements are acknowledged and recognised on the Skills Mecca web site.
9. Progressively support the development of the new apprenticeship of 21st Century (A21) in the District.
10. Implement a process that tracks and traces all learners on Skills Mecca programmes to determine their employment status post programme completion.
11. Plan and implement a Skills Summit that is held in a different local municipality within the Garden Route every two years

IDP Strategic Objective: Skilled Workforce and Communities GDS Strategic Priority: Supporting Wellbeing and Resilience			
#	PPP Name	Status	Next Actions as of Today
1	HWSETA Home Based Care (140)	Training completed	Final assessment scheduled for May 2024
2	Multipurpose District Training Academy	Fire Fighting Accreditation in Place – Roll Out 1 April 2023	Partnership with South Cape College with possible funding from TIRISANO
3	GRSM Technicians (12)	Roll Out in Progress	WBLDP & Project Management Training SIFA Proposal for next 18 months Support pending approval
4	NSF Tourism and Hospitality (400)	Award received for R36m for 400 unemployed Learners	MOA, Recruitment & Procurement planned for May 2024.
5	LG SETA Discretionary Projects 2022	Award received 20 x Fire Fighters, + 74 Water Practitioners and 37 Electricians	All programmes are being rolled out.
6	Align & Link EPWP Projects with GRSM	Skills Mecca integrated into EPWP Process	Attend ALL EPWP Steer Comms Always use EPWP Host Employer Contracts
7	SASSETA MOA Annual Roll Out	Award received for 120 Patrol Officers	Programme rolled out across District.
8	JET Solar PV Development (EWSETA / GIZ)	Award received from 40 Renewable Energy Assistants.	Programme rolled out with REWA now at workplaces. Procurement for providers for REW Assistant & WBLDPs.
9	TRISANO - SAVE	25 GRDM unemployed Learners Selected and contracted.	Gwaing River Road Project being rolled out

3.8.3 Participation Of Garden Route District Municipality in the Youth Environmental Service 2022/2025 Project

Garden Route District Municipality has been conditionally selected to participate in the Youth Environmental Service (YES) 2022/2025 project. Youth Environmental Service (YES) is one of the Youth Empowerment and Development sub-programmes which is implemented by the Department of Forestry, Fisheries and the Environment (DFFE) through the Environmental Protection and Infrastructure Programme (EPIP) Nationally.

The programme prioritizes and targets young women, youth with disabilities, unemployed, out of school youth, and youth in rural areas. The project involves bringing about solutions to environmental problems inclusive but not limited to erosion, waste, deforestation, biodiversity management, education, awareness etc. YES, emphasis is centred on three pillars: community service, accredited training, skills and personal development and exit opportunities.

The seven (7) Local Municipalities under Garden Route District are afforded an opportunity to participate in the programme. These municipalities have also committed to include this project in their IDP for the financial years.

3.8.4 Growth and Development Strategy

The Garden Route Growth and Development Strategy was adopted in 2021 off the bat of an intensive series of engagements between all spheres of government, the private sector and civil society. These engagements were facilitated to co-create a shared vision for the region and identify key priority areas to drive collective action. These priorities are:

1. A water secure future
2. A circular economy
3. Resilient agriculture
4. Sustainable tourism
5. Supporting wellbeing and resilience
6. A connected economy: Transport, rural and urban integration, and ICT
7. Sustainable local energy transition

Since then, work has been underway to develop the implementation plan for the 5-year horizon and strengthen the collaborative governance framework through which collective impact can be enabled.

A GDS review workshop is scheduled for March 2024 to identify whether the identified projects in the implementation plan are still relevant

3.9 Annual Review Process

Section 21 (1) (b) of the Local Government: Municipal Finance Management Act 56 of 2003 stipulates that the Executive Mayor must at least ten months before the start of a budget year table in the municipal council a time schedule outlining the key deadlines for –

- (i) the preparation, tabling and approval of the annual budget;
- (ii) the annual review of –
 - (aa) the integrated development plan in terms of Section 34 of the Municipal Systems Act; and (bb) the budget-related policies;
 - (i) tabling and adoption of any amendments to the integrated development plan and budget related policies; and
 - (ii) any consultative processes forming part of the processes referred to in subparagraphs (i), (ii) and (iii).

Section 20(2) of the Spatial Planning and Land Use Management Act 16 of 2013 (SPLUMA) requires that “the municipal spatial development framework (MSDF) must be prepared as part of a municipality’s integrated development plan in accordance with the Local Government: Municipal Systems Act 32 of 2000.”

At the adoption of the previous IDP the municipality re-adopted the MSDF, initially approved in 2013 and reviewed and re-

submitted for final adoption of the amended MSDF in May 2019 concurrently with the five-year 2017 - 2022 IDP. The 2019MSDF was re-adopted in 2022, when the 2017-2022 IDP was re-adopted. A revision of the 2019MSDF was done, resulting in the adoption of an amended MSDF, adopted concurrently with the amended IDP for 2022 – 2027, in 2023. The process of review or amendment of the MSDF runs concurrently and integrated with the IDP amendment process which gives credibility to the MSDF as a core component of the IDP.

Council adopted an integrated IDP, MSDF and Budget Time Schedule in accordance with Section 21(1) (b) of the Section 21 (1) (b) of the Local Government: Municipal Finance Management Act 56 of 2003. The Time Schedule contains the following:

- A programme specifying time frames for the different planning phases.
- Appropriate mechanisms, processes and procedures for consultation with and participation of local communities, organs of state and other stakeholders in the IDP, MSDF and Budget process; and
- The identification of all plans and planning requirements binding on the municipality in terms of provincial and national legislation.

3.10 Project Prioritization

Municipalities are responsible for delivering basic services to their communities in a way that is acceptable and in accordance with national requirements. The municipal assets need to be maintained and in certain instances new assets need to be established to respond to these requirements. Catalytic projects that contribute to urban restructuring, revitalisation and integration were identified in the 2013MSDF and conceptualized through local spatial development frameworks that ascribed to the objectives of the MSDF.

The MSDF is a 20-year plan and while the objectives and policies in the MSDF have been improved over the past 20 years, the projects that align with the amended MSDF have been listed in an implementation plan and are captured in a capital expenditure framework to ensure funds are allocated for execution. The local spatial development frameworks have been reviewed and the amendment of the respective LSDF's will be prioritized based on the current priorities, identified in the 2023MSDF.

The development and maintenance of assets are normally identified via infrastructure master planning, infrastructure development plans, maintenance plans and national programmes. Secondly, the Municipality, during engagement with communities and key stakeholders, received requests for various projects and programmes to uplift and develop the communities.

The municipality needs to find financial and other assistance to implement all the capital projects and programmes and to meet the needs identified. It is understandable that municipalities do not have access to sufficient resources, and it is therefore crucial to prioritise the allocation of secured funding to ensure that at least "immediate issues" are addressed. The prioritisation process is necessary to ensure growth of the Municipality and the municipal area but also to continue delivering on its core service-delivery mandate – which also depends on the availability of capital for delivery of services such as access to water, sanitation, electricity, refuse removal, roads, parks, community facilities, etc. It is also important to include priorities from communities at a ward level.

It is imperative for the Municipality to consider utilising a standardised prioritisation model in future budget cycles.

Figure 24: Project Management Cycle

3.10.1 Capital programme and project prioritisation

This model is based on weights allocated to the strategic objectives discussed above and other approved criteria. The weights set per criteria varies from 100 to 5 based on the importance of the criteria set. The higher the weight, the more important the criteria. The projects and programme will therefore be prioritised, based on the total of the weights allocated to the selected criteria.

The categories in which the criteria will be grouped should be carefully selected to ensure that the projects and programmes are prioritised in terms of the real needs and the risks that the Municipality may face if the project or programme is not implemented. The criteria are:

3.10.2 IDP Strategic Objectives

Council must develop and approve its strategy for its term of office and this strategy must be documented in the IDP. The strategy includes its vision, mission and strategic objectives. The strategic objectives approved must be aligned with the responsibilities of the municipality as per the Constitution of South Africa, the National Key Performance Areas, the National Development Plan, the National Outcomes, the Provincial Strategic Goals and the needs of the communities. Council should then be spending its energy on implementing its strategic objectives during its term of office.

The capital projects/programmes identified, should be prioritised to ensure that they support this strategy of Council and the needs of the community.

3.10.3 Master Plan Objectives

The master-plans for each of the municipal services identify key objectives for the respective services and a list of activities to ensure growth and to maintain the related assets. The services are prioritised in terms of the urgency to address the activities identified. The urgency is based on the risk that the service might collapse or deteriorate if not addressed.

3.10.4 Project Dynamics

The prioritisation of some of the projects for the IDP cycle in the Municipality, however, does not have to start from a zero-base. The existing schedule of capital projects could consist of a mixture of roll-over committed projects, grant-funded projects, counter-funding commitments, and roll-over funding commitments and operational expenditure requirements. The above issues are considered to ensure that the momentum in delivering the capital programme is not disrupted.

3.10.5 Project Consequence

This category determines the consequence if the project/programme is not implemented.

3.10.6 Financial Resources

Unless there is a clear understanding and common agreement of the financial resources available to implement the capital projects and programmes prioritised, it is impossible to calibrate the prioritisation criteria appropriately. To determine available financial resources, the following must be certified annually:

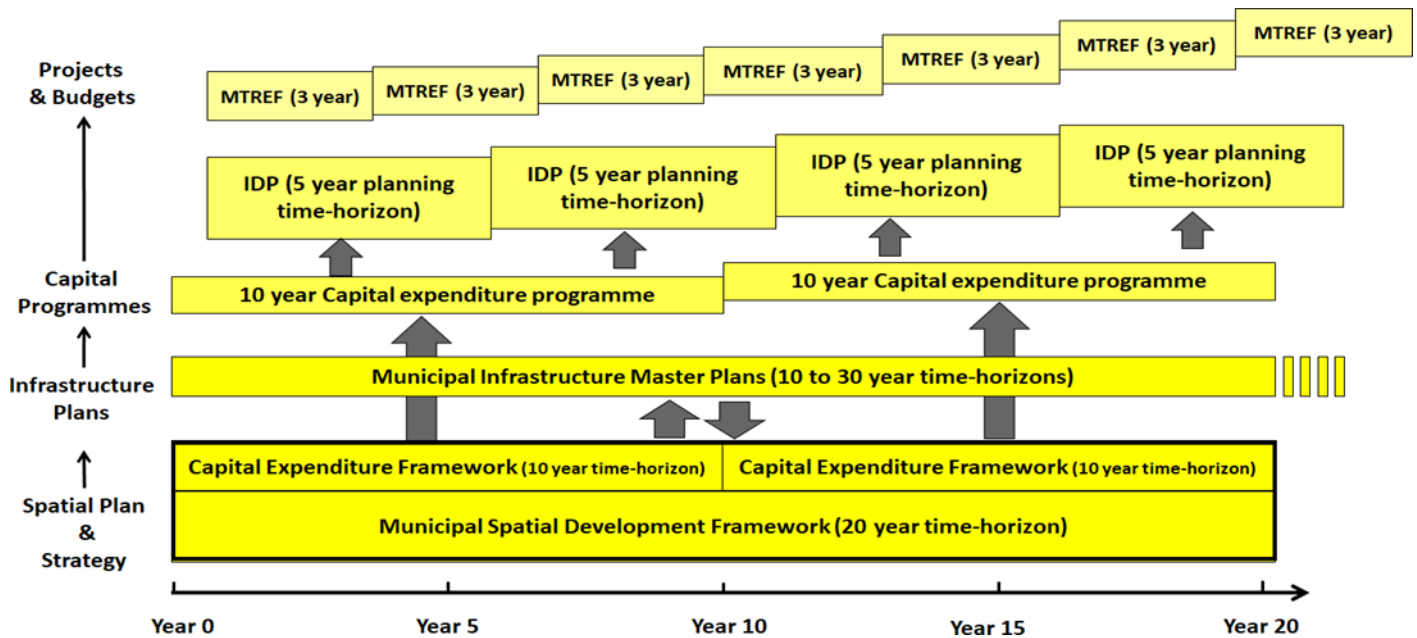

- Committed projects with confirmed funding;
- Grant-funded projects with gazetted/confirmed “in writing” funding;
- Projects facing unforeseen delays, but that must remain on the schedule for valid reasons;
- Verification of the correct funding source to each project, as the prioritisation will also focus on municipality’s own funding sources;
- Confirmed counter-funding commitments; and
- Assessment of spending capability and project readiness within the respective financial year to spend the allocated amount.

3.11 Capital Expenditure Framework

One of the contributing factors to the lack of spatial transformation and implementation of MSDF’s is that strategic policy seldom leads the implementation agenda of municipalities/departments/SOE’s, nor does private initiative contribute to the spatial intent. Ideally, from a municipal perspective, the infrastructure and built environment programmes articulated in the 5-year Integrated Development Plan should find their origins in the Engineering Master Plans and MSDF, which is the 20-year plan for the management of the physical growth and development of the municipality.

Section 21(n) of SPLUMA requires that municipal spatial development frameworks “determine a capital expenditure framework for the municipality’s development programmes, depicted spatially”. The intention is to link the municipality’s spatial development strategies more effectively to the municipality’s budget and the budgets of other government stakeholders. By providing more specific guidance on what investments should be made where, in what order of priority, alignment between the Municipality’s strategies, plans and policies and development on the ground is better maintained and the risk that budget allocations undermine or contradict the MSDF are mitigated.

A Capital Expenditure Framework is a single, consolidated high-level view of municipal infrastructure, assets and built environment needs over the long term (10 to 20-year planning horizon) that considers not only the infrastructure needs of the municipality, but also how these needs will be financed and what their budgetary impact will be on the municipal financial sustainability in the future. Importantly, the nature and location of the proposed infrastructure investments must originate from and give expression to the spatial strategies, development proposals and development objectives set out in the MSDF, as shown in the Figure below.

Figure 25: *Municipal Planning Tool*

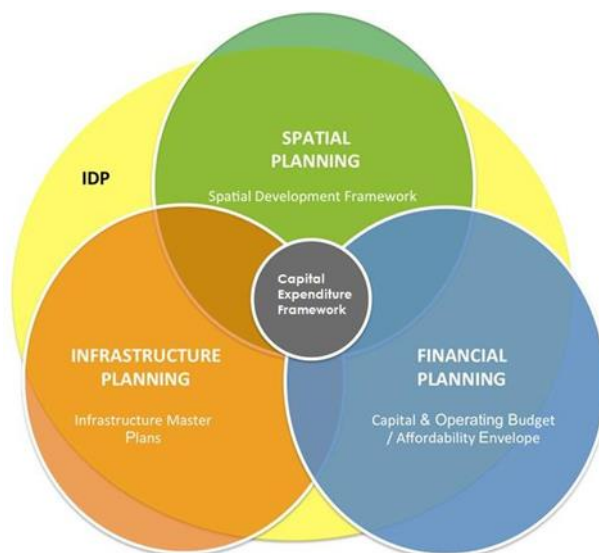

Simply put, a MSDF must articulate what kind of development should take place and where it should take place; the infrastructure master plans will ground these proposals in a quantification of the infrastructure implications, whilst the long-term financial plan must define the financial parameters within which the infrastructure, assets and built environment must be developed and managed.

The importance of considering the capital affordability envelope set out by the Long-Term Financial plan, is to ensure that a consolidated and prioritized programme of project needs is affordable to the municipality and fits within the affordability. The figure below, illustrates this concept in that, invariably, the level of need for infrastructure investment within South African municipalities is usually far greater than what can be afforded, hence requiring prioritization of where limited capital investment is spent.

Figure 26: *Affordability Envelop*

The three broad areas of spatial planning, infrastructure planning and financial planning are needed to co-create a CEF through an iterative process of engagement, scenario-testing, and confirmation of the chosen proposals. The outputs of this process are a portfolio of capital projects required and a prioritized capital infrastructure programme, which is responsive to the MSDF, the engineering needs and affordable to the municipality.

Figure 27: CEF Co-creation

Over the medium term, George's Capital Budget ranges from R255,000,000 in 2021/22 to R190,000,000 in 2023/24. In the outer year, this budget is not necessarily affordable for George. The lion's share of this budget is grant funded which will yield limited growth, especially since the impact of covid-19 on the public purse. The grant funding available to George also has limited flexibility relating to public transport network development and operations and electrification programs, with the Municipal Infrastructure Grant offering the most flexibility within the realm of engineering services. Public transport funding does, however, present an opportunity to develop public transport routes as complete streets inclusive of high-quality pedestrian and NMT (Non-Motorized Transport) facilities. Developer contributions are factored into the Municipality's financial planning.

3.12 Smart City Principles - A City of The Future

At the onset of a new Council cycle, Council is required to develop a new IDP. The longer-term strategy sets out the principles and actions required to meet the longer-term goals of the Municipality in order to create the George for the future of all its people.

It is acknowledged that there has been a strategic gap within the City over the past 5 years and primary to this has been the (perhaps) perceived failure to meet the opportunities provided by the global drive towards smart cities. Whilst the majority of South African metros and intermediary cities have embraced a technological and data-driven response to opportunities and challenges, requiring a radically different strategic and operational approach to technology, citizens, institutions and the built environment, George has not been as explicit.

In today's urban environment, local governments have to deal with increasingly complex mandates, social inequalities and economic growth in a context of increasing environmental and economic uncertainty. These complexities are exacerbated by rapid urbanisation and the subsequent proliferation of urban poverty and necessitates more efficient and effective management and governance of urban and municipal systems. ICT has the potential to advance the management and coordination of cities, contribute to their economic success, and improve the quality of life of its residents and George needs to proactively explore smart city interventions as a means of overcoming the rising challenges of urban development and sustainability, becoming more

resilient, innovative and creative. Responding to challenges such as congestion, rising crime, growing urban poverty and the need for more efficient service delivery practices, an increasing number of cities have made the choice to use smart technologies and encourage innovative practices as part of their efforts to become more resilient and liveable.

In his State of the Nation Address (SONA), the President of South Africa, Mr. Cyril Ramaphosa, expressed his dream of building a South African smart city, driving a broad national vision for reinvigorated human settlements outlined in, among others, the National Development Plan (NDP); the Integrated Urban Development Framework (IUDF); and the District Development Mode.

A smart city is not a “technological fix” or a technical solution to social, political, and environmental issues. If this approach is undertaken, it will only serve exacerbate the digital divide that exists in many cities and excessive emphasis on the latest technology will have additional unintended consequences. A smart city is rather a settlement where investments in human and social capital, and traditional and modern communication infrastructure fuel sustainable economic development, a better quality of life and prudent management of natural resources.

3.12.1 Elements of a Smart City

Smart cities focus on the following elements:

- a) Smart cities will promote the use of technology, information and data to enhance and improve its infrastructure and services. This includes access to resources like water and electricity. Providing homes that are affordable to all, provision of proper education and health services, and increase IT connectivity.
- b) A larger number of government services will be made more accessible to people. Services will be offered online and will provide more accountability, transparency and more involvement of the public. Formation of E-groups will allow people to voice their opinions and receive feedback, monitor programs and activities with the help of cyber tour worksites.
- c) An increase in access to public transportation and creative solutions such as smart parking, intelligent management, and integrated modal transport. Smart cities will be more pedestrian and cyclist friendly with key administrative services at shorter, walkable distances.
- d) Smart cities will redevelop or develop unplanned and poorly planned areas such as fewer formal areas, with a vision to make cities safer, resilient and less disaster-prone. With the use of video surveillance, criminal activity will be tracked, and drastic security measures will be taken to protect women, children, and senior citizens.
- e) Urban heat effects will be reduced by creating and maintaining parks, playgrounds, and recreational spaces with generous vegetation and preventing further loss of vegetation. Living spaces will be made to accommodate the growing population and enhance its standard of living.

3.12.2 Smart City Strategic Objectives

Infrastructure will be more sustainable and eco-friendlier, by reducing the amount of waste generated and also through mindful consumption and protection of natural resources. The smart city system has three main pillars: governance and management; infrastructure; and human/ social services. Each of these pillars can be further sub-divided into sub-pillars:

- a) Governance and management services: Corporate governance, institutional transformation, and financial management.
- b) Infrastructure: Energy and the environment, transport and utilities, and development management; and

- c) Human/ social services: safety and security, economic development and growth, and sustainable communities.

Each of these pillars must be translated into strategic objectives for the city, and each strategic objective further dissected into key performance areas with key performance indicators for the purposes of performance management, monitoring and evaluation.

3.12.3 Smart City Outcomes

It is important to have a clear grasp of the nature and goal of the suggested interventions while implementing smart city projects. The demands of the entire city might be met by focusing these activities on various target services through municipally sponsored smart city programmes (municipal area). Smart City projects should focus on enhancing the quality of life for city residents, particularly with regard to the many services provided to them in the municipal area.

Collaboration between internal and external stakeholders is required for the achievement of the aim and for the execution of smart city projects. George Municipality will prioritise Smart Governance with an emphasis on E- Government during the course of the following five years (2022–2027). The goal is to create a Smart City Framework for Council approval in the fiscal year 2023–2024.

While selecting, developing, and executing smart city activities that are suited to the topic of smart governance, internal stakeholders will benefit from having a structured framework to help them make decisions.

CHAPTER 4: Sector Plans and Implementation

4.1 Introduction

The municipality has a number of medium- and longer-term sector plans that direct the implementation of the different functional areas. These plans form an integral part of the Integrated Development Plan (IDP).

Although the time-periods for sector plans and the IDP differ (e.g., the mSDF has a 20-year horizon, IDP has a 5-year horizon and sector plan can be revised annually), the MSDF, IDP and sector plans inform each other mutually, and collectively inform the Capital Expenditure Framework. Like the IDP, the MSDF and sector plans are subject to periodic review. Alignment between the MSDF, sector plans and the IDP allow for more effective budgeting integration over the medium and long term.

The sections below expand on key sector plans of the Municipality.

Service delivery implementation plans

Plan/Strategy	Date of approval	Date of renewal
■ Air Quality Management Plan	■ April 2019	■ 1 July 2025
■ Comprehensive Integrated Transport Plan	■ June 2015	■ June 2025
■ Disaster Management Plan	■ March 2024	■ March 2025
■ Economic Development Strategy	■ 30 June 2024	■ June 2025
■ Electrical Implementation Plan	■ June 2025	■ Once Off
■ Electrical Master Plan	■ June 2025	■ June 2050
■ George Bulk Raw Water Plan	■ June 2008	■ June 2022-2024
■ George Roads Master Plan	■ June 2005	■ Currently reviewing
■ Human Settlements Plan	■ 23 February 2024	■ 01 February 2028
■ ICT Policy	■ 29 May 2023	■

■ Municipal Spatial Development Framework	■ 31 May 2024	■ 31 May 2025
■ Pavement Management Plan	■ June 2019	■ June 2024
■ Storm Water Master Plan	■ June 2019	■ June 2022 - 2024
■ Street and Stormwater Maintenance Plan	■ 01 July 2024	■ 01 July 2025
■ Water Services Development Plan	■ 24 April 2024	■ 31 October 2024
■ Workplace Skills Plan	■ 23 April 2024	■ April 2025

4.2 The relationship between the Sector Plans and Strategies

Sector plans need to support and reinforce each other to be credible and ensure all strategies ascribe to the same objectives, resources and planning are coordinated and consolidated and assist in sustainable development of the municipal area. The table below illustrates how different key sector plans inform and direct each other.

Table 27: The relationship between sector plans

Sector Plan	Spatial Development Framework	Human Settlements Plan	Integrated Transport Plan	Infrastructure Master Plans
Municipal Spatial Development Framework (MSDF)		<ul style="list-style-type: none"> Identifies areas to be protected from settlement (e.g. heritage, agriculture and natural) Designates housing priority /restructuring areas Integrates settlement patterns with infrastructure plans 	<ul style="list-style-type: none"> Identifies areas to be protected from settlement (e.g. heritage, agriculture and natural) Improved access to amenities/employment Spatial integration through strategic linkages/ non-motorized Indicates areas desirable for densification/specific land use/integrated networks 	<ul style="list-style-type: none"> Identifies municipal growth direction Identifies priority development areas Identifies infrastructure priority areas Promotes fiscal sustainability optimized utilization of existing infrastructure and compact development
Human Settlements Plan	<ul style="list-style-type: none"> Identifies current settlements and interventions that should be accommodated in future planning Determines settlement needs/ requirements for upgrade/opportunities for redress Quantifies extent of demand for various housing typologies 		<ul style="list-style-type: none"> Identifies current settlements and interventions that should be accommodated in future planning Determines settlement needs Quantifies extent of demand for various housing typologies 	<ul style="list-style-type: none"> Identifies current settlements and interventions which should be accommodated in future planning Determines settlement infrastructure needs Quantifies extent of demand for services according to various housing typologies
Integrated Transport Plan	<ul style="list-style-type: none"> Determines most efficient responses to transport challenges Identifies transport and traffic priority areas Shapes future planning according to most appropriate modal changes and challenges 	<ul style="list-style-type: none"> Identifies transport and roads priority areas Determines development parameters, e.g. parking ratios, access and standards Shapes settlement planning according to most appropriate modal changes and challenges 		<ul style="list-style-type: none"> Determines most efficient responses to transport challenges Identifies transport and traffic priority areas Shapes future planning according to most appropriate modal changes and challenges

	<ul style="list-style-type: none"> Identifies need for services not provided by the municipality, e.g. SANRAL, Provincial Roads, PRASA, Transnet 			
Infrastructure Master Plans	<ul style="list-style-type: none"> Identifies existing infrastructure capacity / constraints Identifies interventions required to support growth / infill Designates priority infrastructure development areas / corridors Promotes fiscal sustainability/ compact development/ optimized utilization of existing networks Provides for services not provided by the municipality, e.g. Telkom Eskom, raw water supply 	<ul style="list-style-type: none"> Identifies existing infrastructure capacity or / constraints Identifies interventions required to support growth / infill Provides for services not provided by the municipality, e.g. Telkom, Eskom, raw water supply 	<ul style="list-style-type: none"> Identifies existing infrastructure capacity or / constraints Identifies interventions required to support growth / infill Provides for services not provided by the municipality, e.g. SANRAL, Provincial Roads, PRASA, Transnet 	

4.3 Sector Plans and Implementation Strategies

4.3.1 Strategic Human Settlements Plan

The purpose of the Strategic Framework of the Sustainable Human Settlements Plan (SHSP) for the George Municipality is to outline a vision statement for human settlements, and to formulate a number of objectives and associated strategies to ensure that progress can be made toward the desired state of human settlements in the George Municipality.

In terms of the long-term vision for human settlements, the purpose is to:

- Set out how the Municipality anticipates managing the development of different types of housing opportunities in support of its spatial development and spatial transformation objectives as set out in the 2019 George Municipal Spatial Development Framework (MSDF) and 2022 draft MSDF; (Note that the MSDF was adopted in May 2023. The SHSP must be amended to fully align with the adopted MSDF 2023);
- Reflect on the role of the George Municipality in various processes related to human settlement development and housing delivery; and
- Reflect on the impact of human settlement development and housing delivery on the financial sustainability of the Municipality.
- The strategic concept or future spatial development vision and related spatial development objectives and strategies as put forward in the MSDF is the key input to this section of the George SHSP, and the Municipality's long-term development vision as set out in its Integrated Development Plan (IDP) will be interpreted to guide the overall outputs of the SHSP.

In terms of human settlement objectives and strategies, the purpose is to:

- Identify clear objectives based on the challenges identified to support the vision for human settlement development;
- Reflect strategic decisions taken in the MSDF regarding where spatial development interventions are to be targeted; and
- Identify land for different types of housing opportunities envisaged linked to the Municipality's strategic approach to infrastructure investment towards achieving fiscal sustainability.

The strategic spatial direction and challenges are drawn from the MSDF, and the strategic input on the Municipality's approach to fiscal sustainability and investment in the built environment is drawn from the Municipal IDP.

The Sustainable Human Settlements Plan (SHSP) is the anchor of creating sustainable resilient integrated settlements with the support of provincial arms of government. A good understanding of the requirements and standards for the creation of a resilient environment is necessary for effective planning and service delivery. The most significant of it all is demographic analysis and projections for forward planning. In the past emphasis, has been placed on housing delivery with little consideration of the social integration component of settlements. Amongst the mechanisms recently advocated for through the National Development Plan (NDP) is the creation of sustainable integrated human settlements with different income groups and social backgrounds.

The shifts and changes in human settlement thinking is not yet fully accepted as increasing pressure on municipalities to deliver housing opportunities with little funding and capacity available at their disposal. Regardless of these realities the

provision of human settlements is still a high priority for most municipalities. Diverse challenges do however exist regarding the capacity of bulk infrastructure services with specific reference to supply of basic services in form of water, electricity, sanitation and waste removal. These infrastructure backlogs which are also evident in George Municipality, thus influences the delivery of human settlements.

Over the past few years, the Municipality has enjoyed accelerated housing provision, but the recent bulk infrastructure challenges are creating pressure on the municipality to deliver.

The non-availability of homes for the group consisting of municipal workers, nurses, teachers, government officials, ordinary factory workers and policemen has highlighted the demand for affordable housing. Given the demand for low- and middle-income earners settlements, there is a serious need for a credible Human Settlement Plan. The plan will ensure medium to long term planning regarding the delivery of the appropriate infrastructure that will enable the municipality to address the backlog for low-cost housing and make land available for affordable housing market segment. A portion of affordable housing is also subsidised by the Department of Human Settlements depending on the income bracket. Within the context of using human settlement development as a catalyst for other municipal service delivery a credible human settlement plan will combat all the issues associated with the municipality to manage the housing situation.

In 2022 the Department of Environmental Affairs and Development Planning commissioned a study on the housing market in George. This study is a critical informant to current and future strategies, plans and policies. It will also assist to drive the transformation agenda of the municipality. Some of the important points include:

- 41% of the 34 071 residential properties in the George city area are in the entry market or came about via subsidised government housing; 17% are in the affordable or conventional market.
- The remaining properties (42%) are valued over R900 000, and thus would require a monthly household income of approximately R22 200 to purchase with a mortgage.
- The study interrogated the spatial distribution of properties by value. It shows a city which is polarised, and which entrenches economic and social inequality.
- Most residential properties below R300 000 are government subsidised and these government subsidised properties over 8 years old serve as stock of low value/ entry level housing for low-income housing.
- In 2019 the average monthly household income in George was R20 650. A household with this income could qualify for a mortgage of R836 500. According to data, approximately 82% of households earn less than this average of R20 650: 42% of households in the George city area earn less than R3 500/month; 20% earn R3 5001-R8 000 per month; and 14.5% earn R8 001 – R16 000 per month.

In 2021 very few new houses were available priced between R300 000 and R900 000 built in the George city area: only 36 homes in 2021, of which 6 were part of government housing projects

The net result is that there is a dual delivery system of new residential properties— private developers build homes in estates selling for over R1.2 million, and new houses at the bottom end of the market, under R300 000, are fully-subsidised by government. Virtually no new homes are built in the price range in between; just 6% of new transactions in 2021 were valued between R300 000 and R1.2 million.

Moving forward policies and incentives will have to be developed to encourage private developers to start to supply freehold (affordable and conventional housing) stock priced between R300 000 and R900 000.

The principles of integrated and sustainable human settlements

- **Principle 1:** Land Infill
- **Principle 2:** Densification
- **Principle 3:** Development within the urban Edge
- **Principle 4:** Mixed Development
- **Principle 5:** Access to public transport
- **Principle 6:** Variety of public transport
- **Principle 7:** Variety of social amenities to choose from
- **Principle 8:** Access to economic opportunities
- **Principle 9:** Variety of Housing instruments relevant to clientele

The IHSP further addresses the following objectives:

- Spatial planning analysis;
- Topographical survey;
- Bulk infrastructure services assessment;
- Social amenities assessment; and
- Implementation readiness assessment

A Beneficiary Selection Policy was approved by Council which will assist the municipality in the regulation of the housing waiting list and the allocation of housing to beneficiaries in a transparent and comprehensive manner. This policy will also enable the municipal council to determine the demand for housing in both rural and urban areas and thus can proactively plan for its citizens. Apart from this long term strategic planning considerations, the municipality will also facilitate other stakeholders in their jurisdiction for transversal partnering for the creation of sustainable integrated human settlements.

4.3.2 Status Quo

The Municipality will consider extending the housing pipeline projects/programmes beyond 2024–2025 to match with the IDP cycle, which ends in 2026–2027, and will represent the housing pipeline and projects for the 2024–2025 municipal cycle.

Large in-migration into George resulting in a strain on infrastructure. Some backlogs in infrastructure upgrades and then additional capacity required to make provision for growth place a huge strain on financial and human resources.

Land invasions pose a threat to service delivery and lead to a delay in Human Settlement Development, especially on land earmarked for this purpose, ultimately derailing planning and development processes. After land invasions, demands are made for services such as water, sanitation and electricity most often which the municipality has not made provision for in their budgets, or in the housing pipeline linked to the SHSP, which after communicated to the land invaders, often leads to disruptive and damaging protests.

4.3.3 Strategic Human Settlements Plan Implementation

One of the focal points of the SHSP is to prioritise the identification, acquisition and assembly of well-located land in spatially targeted areas to achieve spatial restructuring, tenure security and expedite human settlement developments. There is a limited number of strategically located vacant land which is suitable for the development of human settlement projects within the George Municipality. Well-located land in the ownership of government entities such as Provincial or National Government has been identified, but lengthy and cumbersome acquisition processes pose a challenge. Project readiness presents an additional challenge as land is often not implementation ready and as a result, human settlement opportunities cannot be delivered in a timely manner.

The Human Settlements Department undertook an analysis of which projects can be feasibly implemented within the next 5 years and which can be implemented at a later date. Factors that were considered included: land use and environmental authorisation status, land acquisition requirements, availability of bulk services, availability of funding, and the need for technical studies. The feasibility of implementing these projects were weighted and prioritised in consideration of the proposals contained in the MSDF, its spatial location in relation to priority upgrade and intensification areas (well-located targeted areas) and potential yield.

It was also important to consider the strategic priorities of the Western Cape Department of Infrastructure (WCDol) when prioritizing the pipeline for future housing projects. In terms of the WCDol Strategic Plan (2020-2025), the Department will focus on increasing affordable housing, reprioritising the allocation of BNG housing to the most deserving beneficiaries (the elderly, people with disabilities, military veterans, people longest on the waiting list and backyard dwellers, as well as directing more resources to the upgrading of informal settlements and the provision of basic services to informal settlements.

The prioritisation of projects should be guided and informed by the urgency of the situation it seeks to address. Informal settlement upgrading projects should receive priority, with settlements which have emergency relocation circumstances (such as flood risk being top priority), followed by densification, infill, and greenfield development projects. It is important to ensure a balanced approach to project prioritisation to ensure that the Municipality continues to supply in the demand for human settlements and the required basic services in a proactive manner by implementing projects which addresses the accommodation needs of all residents, and not just those of informal settlements.

4.3.4 Provision of basic services to informal settlements

George Municipality is currently providing 919 chemical toilets in its informal settlement areas which is financially unsustainable- alternative technology. These toilets are rented from a service provider at an average cost R940 per toilet per month, including a monthly maintenance fee of R250. Thus, it cost the municipality in the region of 10,37 million per year to operate these toilets. The Human Settlements Department initiated a pilot project to replace the chemical toilets in 2022. The project comprises a total of 43 alternative technology toilets, provided at once-off installation cost of R18 730 per toilet. The Municipality will own the toilets, with the service provider charging a monthly maintenance fee of R125 per toilet. The pilot has proven to be successful and the Department is in the process of sourcing funding to roll-out this service (replace the chemical toilets) over a period of 3 years at a total cost of R17,4 Million. This will reduce the operational costs of these toilets to R1,44 million per year, excluding the maintenance and repair costs.

Funding was made available for the provision of Interim Basic Services for 13 new informal settlements which arose as a result of continued land invasion. Consultants have been appointed to compile a funding application to PDOHS.

The objective is to provide minimum access to basic services of one water-borne toilet for 5 households and one water point for 25 households.

The Sustainable Human Settlement Strategy was approved by Council after an extended public participation process.

4.3.5 Social Housing

A feasibility study was concluded for development of social housing on the Remainder of Erf 464, George, better known as the Old Crocodile Farm. This is the first social housing project planned by the Municipality.

The planning permissions and environmental authorization for the project has been obtained and the Municipality has adopted Design Guidelines for Affordable and Social Housing, which will be applied to all development the satisfy the criteria of the guidelines.

A Incentive Policy for Affordable Housing has been adopted and the call for proposal to appointment a suitable development agency will be published once Council has granted the mandate.

4.3.7 Electricity MV Network Master Plan

Approximately 100 % of formally surveyed erven in the George LM electricity licenced areas, have access to conventional AC electricity. It is currently unknown how many informal structures are “ready” for electrification, as many of the structures are illegal and erected in flood plains, on unstable slopes or on private land.

It remains the intention to provide conventional electricity to all structures on surveyed erven – something that has been successfully done up to now. Electrification is done by mainly by the INEP (National Electrification Program) as administered by the Department of Energy (DoE).

It is also the aim to provide lighting (conventional, spot and high mast lighting) to all residents of George Municipality. This aim becomes particularly challenging in areas where Eskom is the electricity licence holder and / or where the residents are very remote.

In order for all of the above to take place, load forecasting is done in line with the MSDF (Spatial Development Framework) and national standards (NRS). Load forecasting is an on-going process and where re-zoning and/or development takes place, the forecasted numbers are updated. These were some of the inputs to the updated Masterplan that was concluded in 2022 focus only on the High Voltage networks.

The scope of this masterplan was limited to the Municipality’s 66kV network and includes a load forecast for the next 20 years. There are subsequent planned masterplans which will address the municipality’s 11kV. Those masterplans will be phased in over multiple years.

Such forecasts are used to ensure that bulk electricity supplies are available. Where forecasts indicate the need to expand or upgrade bulk services (mainly the 66kV network and the capacity of Main Intake Substations), these need to be timed and done in time. A new Main Intake Substation (66/11 kV) is under construction in Thembaletu and should be commission early on 2024. Funding such Bulk Supplies from the CRR (Capital Replacement Reserve) puts a huge burden on available funds. Alternative funding source, ideally grant funding, will be continually explored.

The upgrade of Glenwood substation which includes the installation of a third 20MVA transformers bay in order to make provision for expansion to the east of George, has already commenced. George Substation is also being upgraded to service the Industrial area along Nelson Mandela Boulevard. Furthermore, various developments are planned for Pacaltsdorp and the upgrading of Protea Substation is required to ensure sufficient capacity to the developments. This substation will be upgraded from 20MVA to 40MVA to accommodate the growth. The Herolds Bay Substation will be upgraded from 11kV to 66kV by the commissioning of the 10MVA transformer. This project is currently underway.

The municipality has also started a pilot for electrification of informal settlements using renewable energy. The findings that come from this pilot will inform the long-term plan of this method of electrification.

The above inflation increases in Bulk Supply (Eskom) tariffs coupled with load shedding, has necessitated George LM to explore alternative energy sources. The Municipality has completed various studies and information gathering exercises. The municipality has developed and approved Renewable Energy and Associated policies:

- Renewable Energy Strategy
- Renewable Energy Policy
- SSEG Policy

- Wheeling Policy
- Generation Pricing Policy

Load shedding is a big challenge and costs the municipality approx. R250 million p.a. in lost revenue and additional expenditure on diesel, overtime and repairs as a result of vandalism. Financial sustainability is a huge concern as many customers move towards alternative energy.

The municipality will have to scale the ongoing undertaking of putting up solar PV plants in municipal office buildings and facilities such as the water and wastewater treatment works. These will have to be coupled with battery energy storage systems to take care of the intermittent challenge associated with renewable energy systems and ensure reliable supply of power for at least 4 hours of load shedding.

The Municipality is exploring various options to mitigate the effects of load shedding, such as:

- Own generation;
- BESS installations;
- Investigations to start buying power from IPP's; and
- Aggregator, demand side management

The scope of Phase 1 of the 11kV Masterplan was limited to the 11kV distribution network within George Municipality in the substation zones of Heatherpark, Protea and Tamsui substations. Other areas outside of these boundaries were excluded from the scope and was included in the scope of Phase 2 of this masterplan.

Figure 30: 11KV distribution network

The study focuses on thermal and voltage violations on the conductors but excludes condition assessment of the network

assets. Within the study, an evaluation was also conducted to analyse the effects of incorporating renewable energy into the municipal electricity grid. However, the scope of the analysis was restricted to focusing on:

- Impact of Renewable Energy on electrical demand. This task assesses the effect of renewable energy production on the load demand.
- Impact of Renewable Energy on the electrical network. This is a steady state study task, thus only considering the voltage levels and thermal loading impact of renewable energy.

Two new substations are planned for operation in George Municipality namely, Thembaletu and Herold's Baai substations. Additionally, Proefplaas switching station is also planned to be converted into a HV/MV substation by moving the 10MVA transformer situated at SS Protea which in turn will be replaced with the 20 MVA transformer from Glenwood. Geographical layout of the substations included in the study below.

Figure 31: New Substation

Load flow software was used to simulate the electricity networks and to determine the required upgrades as will be needed over the next 20 years. The report summarises these upgrades. Phase 2 of the Masterplan is currently in process and will be presented to Council in June 2024.

4.3.7.1 Renewable Energy Strategy

Considering various factors, the need for a strategy regarding Renewable Energy is of utmost importance. This has a significant influence on the sustainability of the

Municipality. No entity can afford not to be efficient.

The factors that influence the need for this strategy can be summarized as follows:

- Ever-increasing energy Costs;
- Scarcity of resources;
- Unemployment;
- The current economic climate;
- Global Warming
- Load shedding.

The Municipality need to look at alternatives and renewable energy sources as a solution to the energy problem. It is furthermore critical to maximize energy-efficient installations. These initiatives need to be rolled out in parallel to have an

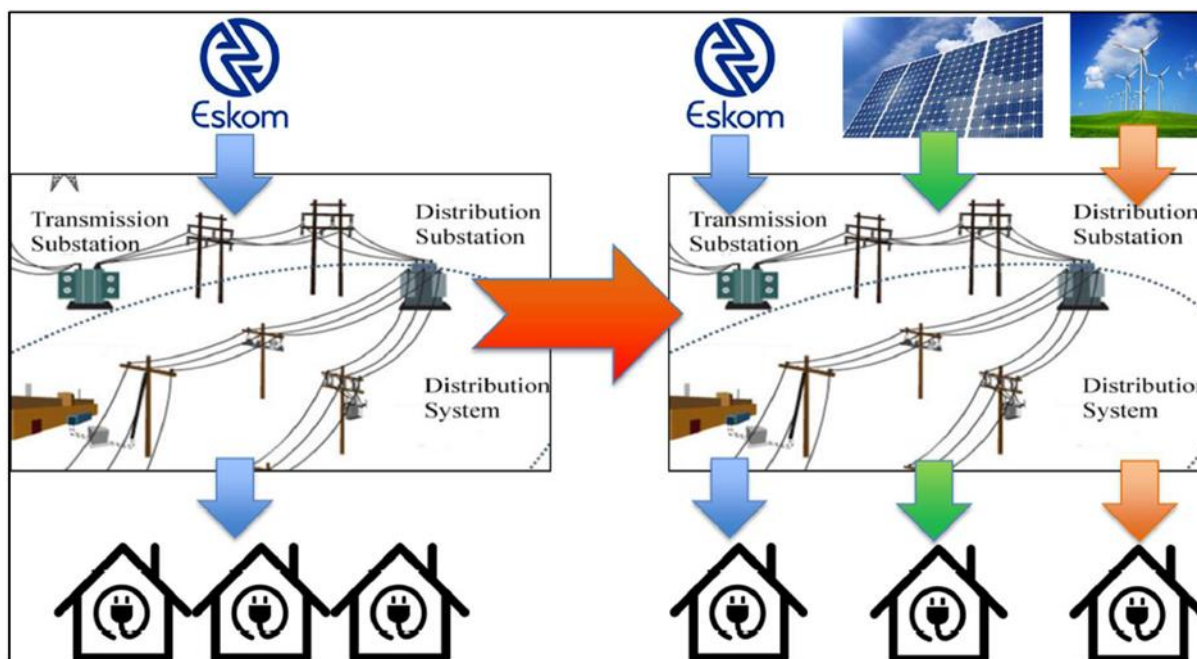

effective sustainable solution. This strategy summarizes, the problem statement for the Municipality, considers various options available in the market as well as identifies strategic objectives for the short, medium, and long term.

- Firstly, the Municipality cannot proceed to buy all of its energy from Eskom, which faces its own challenges.
- Secondly, the Municipality needs to counter the effects of ever-increasing tariffs to provide some relief to the communities in George.
- Thirdly, whilst the price of electricity keeps increasing, so does the unreliability of the network and load shedding. The Municipality needs to look at ways not to be as reliant on Eskom.

This may counter the death spiral caused by customers that are continuously grid defecting. The Eskom electricity prices are expected to continue increasing while the cost of wind, solar PV, and battery storage continue to decline. A study by the CSIR as well as proposals received from a recent RFP, confirms that renewable energy is a feasible alternative to energy requirements. The energy Strategy goes on to evaluate various energy sources and lists their advantages and disadvantages. The Municipality is furthermore governed by various regulations, relating to electricity distribution in South Africa. This is explained in this strategy.

The end game is to provide the customer with competitive alternatives. If there are no other options available in the market, own generation will be installed. This will lead to grid defection. From this it can be concluded that the energy space will be transformed in the coming years.

Figure 32: Energy distribution

Based on the strategy, the document includes the Municipalities way forward divided into a short- and medium-term strategy.

As Stated in the Renewable Energy Strategy, the end game is to provide the customer with competitive alternatives. George Municipality had changed the current tariff structure in order to be more cost reflective. The previous tariffs do not reflect the actual cost of supplying different consumers accurately and do not address the changing energy space. In view of this and as per the National Electricity Pricing Policy (EPP) and NERSA requirements a detailed cost of supply (COS) study was conducted and was approved by NERSA and Council.

One of the main reasons for the cost reflective tariff is therefore to open the energy market into a more competitive market where energy can be procured from various suppliers or generated by yourself, and the Municipality would still cover the basic cost to supply the power to the erf as needed.

A Cost reflective tariff was introduced consisting of:

- Fixed consumer costs (meter and service connection, meter reading and billing or vending for pre-payment, revenue management).
- Network (capacity / demand) costs. These costs include: The Eskom access charges and maximum demand charges as well as the George network costs including operational and maintenance costs.
- Energy costs. This is the actual energy consumed by the consumer in kWh.

4.3.7.2 Wheeling

This is a new concept to electricity that has a lot of potential. This refers to energy that is being transferred from an independent generator to an end user or off-taker, via an established electricity network (may be Eskom and/or Municipal). This is primarily a financial transaction. In a wheeling transaction, the power purchase occurs between two (2) private parties in terms of a power purchase agreement (PPA). The ownership of the electrical energy does not transfer to the owner of the transmission or distribution system.

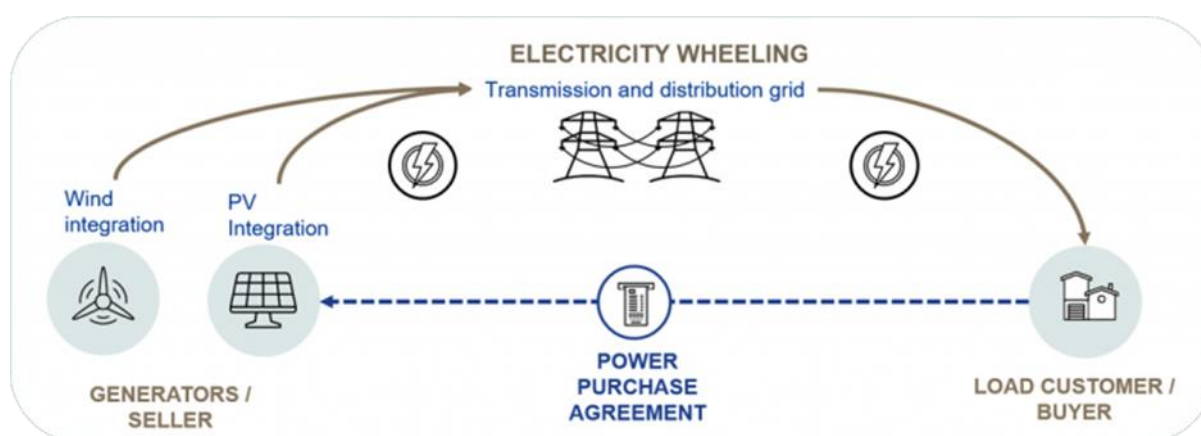

Wheeling can occur in one of the following configurations:

- Where a Generator is connected to the Municipality network without the involvement of a trader and supplies 1 off-taker on the Municipal grid.
- Where a Generator is connected to the Municipality network with the involvement of a trader allowing multiple off-takers on the Municipal grid.
- Where a Generator is connected to the Eskom network, without the involvement of a trader and supplies 1 off-taker on the Municipal grid.
- Where a Generator is connected to the Eskom network, with the involvement of a trader allowing multiple off-takers on the Municipal grid.

A simple example of wheeling could be an IPP solar farm based in the Northern Cape, selling its energy to a corporate company in Gauteng and the electricity is delivered using Eskom's transmission network and the municipal distribution network.

Wheeling does not necessarily mean that the electrons entering the transmission network at point A will be used at point B – it's rather the act of balancing the energy from the generator with the end user consumption within the time-of-use (TOU) period, thus wheeling is more of a financial transaction. The process is schematically shown below:

Figure 33: Wheeling Distribution

George Municipality has taken a huge step towards wheeling implementation with the Pilot project where the first wheeling transaction took place in May 2022, following the signing of the use-of-system agreements in July 2021. The wheeling pilot consists of trade between one generator and four off-takers.

4.3.7.3 IPPs

An IPP, Independent Power Producer is an entity, which is not a public electricity utility, but which owns and or operates facilities to generate electric power for sale to a utility, central government buyer and end users.

George Municipality is actively pursuing this option for diversifying energy Sources. This could therefore be any company with a generation plant that is willing to sell the energy to the Municipality or Eskom. It is crucial that the private sector plays a role in addressing the future electricity needs of the country.

The introduction of private sector generation has multiple benefits, such as:

- reduce the funding burden on Government;

- distributed generation; and
- Renewable technologies.

George Municipality is the licensed electricity distributor and was in the recent history supplied by Eskom. The Municipality therefore was mainly responsible for generation and is not geared to do generation on large scale without some changes to the structure or out-sourcing. It is therefore advisable to remain a distributor for the majority of the demand and keep the generation to a limit.

To this end, the option of maximizing the use of IPP's is the preferred option, since:

- All maintenance will be done by the IPP;
- All capital expenditure, will be for the IPP's account; and
- All approvals required as well as construction will be managed by the IPP.

The process to appoint an IPP, is however very complicated. The reason therefore is that in most cases, the IPP need to get a return on investment and in order to be competitive in the market, the contract that is needed between the IPP and the Municipality would exceed 3-5 years. This makes the signing of the contract by the Municipality a challenge in terms of the MFMA.

The Municipality's aim is to sign the first IPP within the next 24 months.

George Municipality had changed the current tariff structure in order to be more cost reflective. The previous tariffs do not reflect the actual cost of supplying different consumers accurately and do not address the changing energy space. In view of this and as per the National Electricity Pricing Policy (EPP) and NERSA requirements a detailed cost of supply (COS) study was conducted and was approved by NERSA and Council.

A Cost reflective tariff was introduced consisting of:

- Fixed consumer costs (meter and service connection, meter reading and billing or vending for pre-payment, revenue management).
- Network (capacity / demand) costs. These costs include: The Eskom access charges and maximum demand charges as well as the George network costs including operational and maintenance costs.
- Energy costs. This is the actual energy consumed by the consumer in kWh.

The 20A tariff was designed with a higher energy cost but with no basic and capacity charges. What is very important for this discussion is that the Municipality also need to be sustainable. It was recognised that if a customer installs PV at his house with a battery, minimal energy will be bought from the Municipality. The services and functions of the Municipality however remain the same as we still need to ensure that the service is available if needed.

One of the main reasons for the cost reflective tariff is therefore to open the energy market into a more competitive market where energy can be procured from various suppliers or generated by yourself and the Municipality would still cover the basic cost to supply the power to the erf as needed.

For any person to remain on 20A whilst obtaining energy from another energy source is not in line with the main goals of the National Policy. This directly impacts the sustainability of the Municipality, and the customer is now receiving 2 parts of the tariff for free when only paying for the little energy needed.

4.3.7.4 Informal Electrification Plan

Electricity is regarded as an essential service. There are various areas within the George Municipal area that does not have any electricity supplies. This results in the residents obtaining their own electricity connections by way of illegal connections on the Municipal network or a connection to an adjacent resident. This causes the following:

- Overloading of electricity networks;
- Unsafe installations;
- Damage to electricity infrastructure;
- Increased electricity losses.

George Municipality yearly allocate funding for the electrification of residential units to mitigate these risks. George Municipality has identified these areas and evaluated if these areas could receive electricity and if there is any restrictions or reasons why this is not possible.

The electrification of informal areas is done by overhead ABC networks, which require less capital and can be recovered once the areas are formalised in future. The estimated cost for electrification is R18,000.00 Excl. VAT depending on the “economy of scale” factor. The areas were identified by the housing department and the UISP Consultants for electrification.

Electrification of settlements should be considered taking the following into account:

- Property ownership:
- Provincial / National government property;
- Private property;
- Areas zoned for other land use purposes;
- Under electricity lines, which is a danger to the community;
- Areas in the Eskom area of supply – which will have to be done by Eskom.

The following is a summary of the areas identified, the quantity of residential units and the estimated budget requirement.

Informal Settlement Name	Ward	Estimated number of structures	Age of Settlement	No of existing installations	Required installations	Estimated cost to complete
Dube (New area)	9	248	5 Years	40	208	R 3 536 000,00
Steybi-Steybi	9	228	18 Years Plus	40	188	R 3 196 000,00
Telkom	9	85	±11 Years	-	85	R 1 445 000,00
Mfuleni (New area)	11	160	±2.5 Years	-	160	R 2 720 000,00
Mpoleni (New area)	11	90	±2.5 Years	-	90	R 1 530 000,00
Dameni (New area)	12	286	±5 Years	40	246	R 4 182 000,00

Informal Settlement Name	Ward	Estimated number of structures	Age of Settlement	No of existing installations	Required installations	Estimated cost to complete
France (New area)	12	478	±4.5 Years	40	438	R 7 446 000,00
Mandela Village (New area)	12	1091	±4.5 Years	40	1051	R 17 867 000,00
New Valley (New area)	12	628	±2 Years	-	628	R 10 676 000,00
Bhekela (New area)	21	261	±3 Years	-	261	R 4 437 000,00
California (New area)	21	140	±1.5 Years	-	140	R 2 380 000,00
Genesis (New area)	21	249	±3 Years	-	249	R 4 233 000,00
Happy Valley (New area)	21	155	±1.5 Years	-	155	R 2 635 000,00
Red Cross (New area)	21	54	±2.5 Years	-	54	R 918 000,00
Robben Island (New area)	21	390	±2.5 Years	-	390	R 6 630 000,00
Moeggeploeg (Bluegum Erf 2732)	27	67	2 years	-	67	R 1 139 000,00
Katdoring	16	20	2 years	-	20	R 340 000,00
Crotonville	16	11	2 years	-	11	R 187 000,00
Haarlem	24	18	10 years	-	18	R 306 000,00
Mooivallei (Rosedale)	14	45	3 years	-	45	R 765 000,00
Skaapkopvallei	16	49	2 years	-	49	R 833 000,00

Council resolved that:

1. That the areas identified be prioritised or sequenced for electrification. This will enable the electrotechnical department to proceed to attend to the technical requirements and administration needed for this implementation based on an approved program.
2. That the areas for electrification be identified according to priority and available budget subject to no electrification be done on:
 - Provincial / National government property without prior approval;
 - Private property without prior approval;
 - Under 66kV electricity lines, which is a danger to the community. 11kV Lines could be relocated if required;

- Areas in the Eskom area of supply – which will have to be done by Eskom.
- The electrification continues with the addressing of the oldest areas first.

4.3.8 Air Quality Management Plan

The first version of an Air Quality Management Plan (AQMP) was compiled for the George Municipality in 2012/13 as required by the National Environmental Management: Air Quality Act, 2004 as amended (NEM: AQA). In 2019 the Council approved a second AQMP version. The George Municipality AQMP is aligned with the Garden Route District Municipality (GRDM) AQMP as well as the Department of Environmental Affairs and Development Planning (DEA:P) 2016 version due to the requirements stipulated in NEM: AQA. The municipality must review the current plan and the new plan must be finalised before the February 2024.

The Western Cape Government (WCG) AQMP was revised in 2016 and forms the backbone of the newly revised George AQMP and its goals will be used to strengthen the George Municipality's air quality management performance over the next five years.

The municipality designated an Air Quality officer (AQO) in 2014 in terms of Section 14 of the Air Quality Act, 2004 as amended. An Air quality officer must perform the duties or exercise powers assigned to. The air quality officer is responsible to coordinate matters pertaining to air quality management in the Municipality, currently the municipality has three Environmental Health practitioners to render the function with the AQO.. The Air Quality By-law for the George Municipality were promulgated in 2010. The Municipality is currently busy reviewing the Air Quality By-law. The By-law is available on the Municipality's website and copies are available from the Air Quality Officer.

Within the WCG context, GRDM issued 21% of the total number of Atmospheric Emissions Licenses (AELs) and 18% of industry registered on National Atmospheric Emissions Inventory System (NAEIS) within the WCG, second only to the City of Cape Town (CCT).

Industry in the George Municipality includes, but is not limited to:

- Agriculture
- Brick manufacturing
- Fisheries, rendering and related industry.
- Forestry and related timber industry
- Tourism

Within the Garden Route Districts context, the following apply to George:

- George is the most populous town in GRDM.
- Along with Mossel Bay, George has the highest number of industrial sources of air pollution in the region.

The following goals were recommended to the George Municipality to further improve the effectiveness of air quality management

- **Goal 1:** Ensure effective and consistent air quality management
- **Goal 2:** Ensure effective and consistent compliance monitoring and enforcement
- **Goal 3:** Continually engage with stakeholders to raise awareness with respect to Air Quality

Management (AQM) and Climate Change Response (CCR)

- **Goal 4:** Support AQM and CCR programmes, including promoting and facilitating the reduction of greenhouse gas emissions (Compile a Climate Change Sector Plan)

Figure 35: AQMP Rating Scale

 Complete	 In Progress	 Not Complete
--------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------

Table 30: AQMP items

Objective	Activity	Rating
Goal 1: Ensure effective and consistent air quality management		
Objective 1.1 Create awareness of AQMP implications	Present the AQMP to George Council for acceptance, approval and inclusion in IDP 6 months	
	Workshop the action plan with George municipal stakeholders, e.g. planning, traffic control, etc., to gain insight and buy-in	
Objective 1.2 Promote cooperation amongst all spheres of Municipal government	WCG, GRDM together with all seven municipalities should initiate discussions with each other about sharing the responsibilities associated with air quality management. This is best achieved at municipal manager level so that the importance of air quality management and the cost implications are brought to the attention of the highest level of municipal management	
	Take notice of annual industry emission survey reports shared by GRDM	
	Participate in discussions and planning where problems exist	
	Cooperate with GRDM in all aspects relating to the identification and compliance monitoring of listed activities	
	Compile list of air quality monitoring equipment available at the George Municipality with the view of sharing equipment as and when necessary	
Objective 1.3 Strengthen and build capacity in AQM, compliance and enforcement	Attend training on interpretation of air quality reports	
	Attend air quality management training with the view of becoming an inspector	
	Attend training sessions on air quality monitoring equipment	
	Maintain an emissions inventory and update on regular basis	
	Plan and procure a comprehensive dispersion model for use in the George Municipality	
Objective 1.4 Develop institutional mechanisms to improve air quality and climate change response	AQO to present and host training to industry and business to introduce Electronic Information System platform and encourage participation by stakeholders	
	AQO to actively engage with stakeholders to ensure business owners and municipal stakeholders submit required information on Electronic Information System platform	
	Customise air quality by-laws in consultation with GRDM, e.g. including regular monitoring of small boiler emissions etc.	
Objective 1.5 Develop, implement and maintain air quality management systems	Arrange a workshop with municipal stakeholders to discuss current poor air quality areas and develop strategies for information-sharing and inclusion in development and planning	
	Plan and execute short-term air quality monitoring projects, in consultation with GRDM, to verify the dispersion modelling results in potential problem areas	
	AQO must report back on short term air quality assessments and distribute findings through appropriate channels	
	Participate in development of pollution prevention plans, based on	

Objective	Activity	Rating
	outcome of dispersion modelling and air quality monitoring programs as and when necessary	
Objective 1.6 Ensure adequate funding for the implementation of AQM by municipalities	AQO must plan and develop an air quality budget for submission to the George Council with the assistance of GRDM if needed	😊
	AQO must budget for the purchase of air quality monitoring equipment which could be shared between municipalities	😊
	Budget for calibration, maintenance and consumables of George owned monitoring equipment	😊
	Budget for dispersion modelling software and training	😞
Goal 2: Ensure effective and consistent compliance monitoring and enforcement		
Objective 2.1 Improve air quality compliance monitoring and enforcement	Develop customised air pollution control plans in conjunction with GRDM as and when required	😊
	Update and review emission inventory on Electronic Information System platform and highlight concerns for further investigation	😊
Objective 2.2 Promote continuous improvement in respect of industry air quality compliance	Provide a reference framework to industry with approved emission survey methodology	😞
	The AQO must undergo training to enable the incumbent to do random inspections at unlisted industries as and when required	😊
Objective 2.3 Develop and implement air quality regulatory processes	Based on short term air quality assessments, amendments to the emission limits in some municipalities may be required. Liaise and coordinate amendments to municipal by-laws to bring revised limits into effect	😞
	With the assistance of GRDM, incorporate emission limits for fuel burning appliances in the George Municipality's air pollution by-laws	😞
	Develop a permitting system for fuel-burning appliances	😊
	Participate in the development of spot-fine system for vehicle emissions and implement system on completion	😞
Goal 3: Continually engage with stakeholders to raise awareness with respect to Air Quality Management (AQM) and Climate Change Response (CCR)		
Objective 3.1 Develop comprehensive education and communication mechanisms, strategies and programmes with respect to AQM and CCR	AQO must develop comprehensive database of interested and affected parties for distribution of information	😞
	AQO must actively engage with stakeholders on regular basis, e.g. biannually	😞
	Coordinate with DEFF and Working on Fire to educate the community on the health risk associated with burning of garden and other waste as well as wildfires	😞
Goal 4: Support Air Quality Management (AQM) and Climate Change Response (CCR) programmes, including promoting and facilitating the reduction of greenhouse gas emissions		
Objective 4.1 Reduce ozone depleting substances and greenhouse gas emissions, in line with National and International requirements	Identify the largest contributors to GHG emissions from the emissions inventory 6 months	😞
	In collaboration with GRDM, initiate a project aimed at setting GHG emission limits on all unlicensed fuel-burning appliances to reduce such emissions in the George region	😞
	If deemed necessary, revise municipal by-laws to allow the setting of GHG emission limits on fuel-burning appliances by municipalities	😞
	Engage with the largest contributors to reduce greenhouse gas emissions through best practice frameworks	😞
	Educate the community on greenhouse gas emissions from household fuel sources and poorly maintained vehicles	😞

Objective	Activity	Rating
	Develop a vehicle emission testing programme and a non-compliance system as service	☹
	Partner with business and industry to roll out voluntary vehicle emission testing programmes	☹

This Air Quality Management Plan promotes information sharing between various municipal departments whose activities impact directly on the community so that cognisance is taken of the impact of development decisions on the quality of air, specifically in residential areas. Funding of R150 000 was allocated for Air Quality purposes in the 2023/2024 financial year.

4.3.9 Public Transport Plan

Transport plays an essential role in the Municipality of George by providing economic and social access to the community and facilitating commercial activities that are the lifeblood of the George economy. The transport network, which includes public transport, private cars, commercial vehicles, and active modes such as walking and cycling, is a primary spatial level for facilitating George's transformation from an agglomeration of separate urban areas into an integrated city underpinned by a thriving service economy.

Part B of the Constitution provides the Municipality with competence for public transport, which remains a priority objective given that a high-quality, affordable transportation system is key to overcoming spatial barriers and promoting inclusive accessibility, especially where it is challenging to redirect private investment patterns towards disadvantaged areas. It makes an important contribution to overcoming the marginalisation of the non-car owning population and ensuring participation in economic and social life in the community.

With this, the Municipality's immediate focus is to consolidate its key public transport responsibilities into a function that performs an integration role across the current municipal departments supporting public transport. The aim is to ensure that the Municipality delivers a sustainable and accessible integrated inter-modal public transport network, including pedestrians, cyclists and public transport services, enabling a transformed society through safe, reliable and affordable access to services and opportunities for work, learning and recreation. This focus is enabled by key functions, including: policy and strategy, planning, integrated public transport network oversight, regulation, liaison, and network operations.

The Municipality's vision for public transport is to provide safe, reliable, and accessible transportation options for the community through effective policy, planning, and management of transport operations and infrastructure in George. The following functional areas have been identified as part of realising this objective:

- **Integrated Planning:** Develop and implement policies, strategies and plans that support sustainable and equitable transportation options for all residents, visitors and tourists.
- **Contracted Services:** Implement and manage a reliable, safety, efficient and affordable scheduled public bus service that meets the needs of the community.
- **Network Operations:** Manage and optimize the use and development use of transport infrastructure to ensure safe and efficient public transport for all users, as well as the use of technology systems, development of travel demand measures and co-ordination with safety and security agencies
- **Regulation and Liaison:** Foster positive relationships with public transport stakeholders and the community to ensure effective communication and engagement on transportation issues and projects, as well as develop and implement the municipal operating license strategy as Planning Authority.

Public Transport remains a priority objective for the Municipality given that a high-quality, affordable transportation system is key to overcoming spatial barriers and promoting inclusive accessibility, especially where it is challenging to redirect private investment patterns towards disadvantaged areas. It makes an important contribution to overcoming the marginalisation of the non-car owning population and ensuring participation in economic and social life in the community.

The George Integrated Public Transport Network (GIPTN), which was formed through a partnership between the Municipality of George and the Western Cape Mobility Department (formerly known as the Department of Transport and Public Works), has facilitated the implementation of the GO GEORGE bus service for the community of George. The first phase of the service was rolled out in December 2014, followed by two additional phases in February and May 2015. A subset of Phase 4 (Phase 4B) was successfully rolled out in March 2020, and first route under Phase 4A was successfully rolled-out in November 2023. Additional Phase 4A routes connecting Thembaletu to the rest of the GO GEORGE network are being implemented sequentially, with the latest roll-out becoming operational in October 2024. The delivery of the bus service is primarily funded through national and provincial grants, with fare revenue, interest on grants, and a rates contribution from the Municipality supporting the project's income source.

Integrated Public Transport Planning is a critical component of a comprehensive transport system in the Municipality. This includes inputs from land use and spatial development models that incorporate land value capture, transit-oriented development, urban renewal and densification, corridor development, economic opportunities, environmental and biodiversity sustainability, and activity nodes. The development of a transport model and register incorporating community mobility needs is also critical, including transport demand management strategy, public transport, scholar transport, staff and

charter transport, freight management, modal integration, rural service, and non-contracted services.

Other components of integrated upublic transport planning and coordination include the development of a freight transport plan, transport, parking management plan, non-motorised transport plan, transport infrastructure plan, network operations management plan, integrated public transport plan, and transport funding plan. These plans cover a wide range of aspects of public transportation, such as freight routes, vehicle composition, hazardous material and management systems, parking guidelines, systems and facilities management, tariffs, surveillance, signage, pedestrian interventions, cyclist interventions, network design, operations plan, operating license plan, universal accessibility development, and funding sources.

Transport Network Operations covers the control and management of traffic signals, parking, congestion, road incidents, freeway management, wayfinding, transport technology solutions or ITS systems, road safety hotspots, safety initiatives, disaster management, events support, enforcement, by-laws, and parking enforcement related to Public Transport within the Municipality.

4.3.9.1 Roll-Out of Phase 4A

The roll-out of Phase 4A of the GO GEORGE Bus Service has been in the planning process for several years. The long-awaited expansion of the service to the community of Thembaletu is anticipated to provide additional capacity to the network and improve the revenue potential for the project.

Arrangements to roll out to Thembaletu by 30 March 2023 were hampered by unforeseen safety incidents, that required additional safety measures to be considered.

The Municipality, with support from the Provincial Government is undertaking additional efforts to further strengthen the security measures and ensure a safe environment for the operations of the service.

4.3.9.2 Impact of Bus Service on Road Infrastructure

The road infrastructure backlog remains an area of concern for the Municipality due to the limited (and declining) grant funding that is available for critical infrastructure projects.

Extensive engagements between the Municipality, Province and National Government are needed to determine the best approach to balance road rehabilitation and maintenance projects with funding allocation that will ensure the continued use of road infrastructure by the GO GEORGE Bus Service

4.3.9.3 Project Financial Sustainability

The long-term financial sustainability of the project needs to be considered given that the PTNG funding has been sporadic, resulting in a larger operating deficit that is largely covered by the Provincial Government through annual allocations and adjustment funding.

Thus, the Municipality would require assistance from WCG to lobby the National Government to unlock additional and continued funding for the project.

4.3.9.4 Institutional Arrangements

With the project in its 8th year of 12 in terms of implementation, the Intergovernmental Agreement between the Municipality and Province is approaching its conclusion.

The Municipality would still value a continued partnership and continuing discussions related to the institutional arrangements with the Provincial Government for the project to ensure that GO GEORGE continues to benefit the people of George.

4.3.10 Comprehensive Integrated Transport Plan

Transport plays an essential role in the Municipality of George by providing economic and social access to the community and facilitating commercial activities that are the lifeblood of the George economy. The transport network, which includes public transport, private cars, commercial vehicles, and active modes such as walking and cycling, is a primary spatial level for facilitating George's transformation from an agglomeration of separate urban areas into an integrated city underpinned by a thriving service economy.

As provided for in Part B of the Constitution, the Municipality has competence for Municipal public transport, which remains a priority objective given that a high-quality, affordable transportation system is key to overcoming spatial barriers and promoting inclusive accessibility, especially where it is challenging to redirect private investment patterns towards disadvantaged areas. It makes an important contribution to overcoming the marginalisation of the non-car owning population and ensuring participation in economic and social life in the community.

With this, the Municipality's immediate focus is to consolidate its key public transport responsibilities into a function that performs an integration role across the current municipal departments supporting public transport. The aim is to ensure that the Municipality delivers a sustainable and accessible integrated inter-modal public transport network, including pedestrians, cyclists and public transport services, enabling a transformed society through safe, reliable and affordable access to services and opportunities for work, learning and recreation. This focus is enabled by key functions, including: policy and strategy, planning, integrated public transport network oversight, regulation, liaison, and network operations.

As a key priority is the George Integrated Public Transport Network (GIPTN), which was formed through a partnership between the Municipality of George and the Western Cape Department of Transport and Public Works, and has facilitated the implementation of the GO GEORGE bus service for the community of George. The first phase of the service was rolled out in December 2014, followed by two additional phases in February and May 2015. A subset of Phase 4 (Phase 4B) was successfully rolled out in March 2020, and the first routes of Phase 4A were rolled out in November 2023. The delivery of this scheduled bus service is primarily funded through national and provincial grants, with fare revenue, interest on grants, and a rates contribution from the Municipality supporting the project's income source.

In addition to public transport, mobility in George comprises various modes, including private cars, commercial vehicles, air, rail and active transportation. The longer-term vision is to expand the public transport focus into a broader mobility function to ensure an integrated approach to planning and implementation of transportation services. The focus on mobility is intended to facilitate the development of solutions that enhance the ability of people to move freely regardless of the mode of transportation they use. The goal is to optimise individual and commercial travel by understanding the social, economic and environmental factors that influence travel behaviour.

The vision of the mobility function would ultimately be to provide safe, reliable, and accessible transportation options for the community through effective policy, planning, and management of transport operations and infrastructure in George.

The above objectives and actions are being captured in the Municipality's updated Comprehensive Integrated Transport Plan (CITP)m which is currently being finalised in order to provide a strategic planning framework for the development of public transport and mobility solutions in George. As a legislative requirement, the CITP is intended to coordinate the comprehensive implementation of strategic objectives in accordance with the municipal functions stipulated through the National Land Transport Act. The updated CITP will include a renewed focus on accessibility, non-motorised transport and public transport and includes the development of a transport model, transport register and Operating License plan.

The updated CITP outcomes will be a foundational element in the development of policies and strategies to ensure the

effective management and provision of transport services and infrastructure. The transport (mobility) policies would be intended to cover a wide range of areas, including institutional, enforcement, environmental, tourism, economic development, modal integration, and spatial planning.

A CIPD including the development of a Transport Model (nearing completion in the first half of 2024) is under development. The transport model summary document is part of a suite of CIPD documents which comprise of a CIPD, Transport Register, Transport Model Strategy, and Operating License Plan.

The overall transport model has been developed on different levels of modeling (mesoscopic), focusing on the following two levels:

- Municipal wide strategic level model (covers George Municipal Area)
- Broad cordon area level model (focuses on the broader, built, area of George)

Figure 37: Public Transport Plan Ratings

 Complete	 In Progress	 Not Complete
--------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------

Table 32: Public Transport Items

Objective	Rating
To co-ordinate and integrate all transport modes and services	
To provide and maintain and operate efficient public transport infrastructure;	
To promote and integrate land use and public transport corridors;	
To ensure safety for all users of public transport	
To ensure continued short term and long terms planning of all public transport aspects;	
To ensure acquisition of funds and its effective expenditure on all transport expenditure	
To maximise empowerment opportunities for people using public transport;	
To improve the general levels of service of public transport	
To minimise adverse impacts on the environment	
To promote and plan for the role of appropriate non-motorised forms of transport such as walking and cycling	
To promote and plan for role of appropriate non-motorised forms of transport such as walking and cycling	
To promote and plan for universal access in IPTN, including walking and cycling;	
To promote travel demand management measures to encourage less car usage, to improve the environment and to improve road safety;	
To promote walking, cycling and other non-motorised transport measures	
To provide non-motorised transport facilities and include their requirements in traffic impact studies	
To incorporate self-enforcing traffic calming measures in the design of new residential areas and to apply the traffic calming policy for existing areas.

4.3.11 Water Services Development Plan (WSDP)

George Municipality is required in terms of Section 18 of the Water Services Act, 1997 (Act No.108 of 1997), as well as the “Regulations relating to compulsory national standards and measures to conserve water”, as issued in terms of sections 9(1) and 73(1)(j) of the Water Services Act, to report on the implementation of its WSDP during each financial year and to include a water services audit in such an annual report.

The WSDP Performance- and Water Services Audit is designed to monitor the compliance of George Municipality with these regulations. The Water Services Act allows the audit to be used as a tool to compare actual performance of George Municipality against the targets and indicators set in their WSDP. It also assists the communities within George Municipality’s Management Area and the DWS to assess how well the Municipality is performing relative to their stated intentions and their capacity. The WSDP Performance- and Water Services Audit Report can be seen as an annexure to the Municipality’s Annual Report. The Annual Report is compiled as required by the Local Government Municipal Systems Act, Act no 32 of 2000 (Section 46) and the Local Government: Municipal Finance Management Act, Act no 56 of 2003 (Section 121).

George Municipality’s Vulnerability Index for 2023 was indicated as 0.26 “Moderate Vulnerability”. The only area of concern evident from the 2023 assessment was Financial Asset Management (Extreme Vulnerability).

The water and sanitation services of George Municipality is managed in a financially sustainable manner, with a surplus generated on the operation and maintenance budgets for water and sewerage services for the last thirteen financial years. The Operation and Maintenance budget allocated towards the refurbishment, replacement and maintenance of the existing water and sewerage infrastructure however needs to be increased. A budget of approximately 2% of the total asset value per annum should be allocated towards the replacement of the existing infrastructure. In the case of the operations and maintenance of the systems, a budget of approximately 1% to 2% of the value of the system is typically required to ensure that the systems remain in good condition.

George Municipality successfully completed various capital projects over the last financial year. The capital budget expenditure, for the 2023/2024 financial year, was R377.643 million (79% of the budget) for the water infrastructure projects and R121.591 million (64% of the budget) for the sewerage infrastructure projects.

The implementation of George Municipality’s Water Conservation and Water Demand Management (WC/WDM) Strategy assisted to reduce the overall water requirements of the towns significantly. The overall percentage of NRW was 32.13% (System Input – Revenue Water) and the percentage of water losses was 20.78% (System Input – Authorised Consumption) for the 2023/2024 financial year. The Municipality is also committed to reduce their current NRW and Water Losses to acceptable levels.

The Municipality continued with their WC/WDM measures to lower the current and future water requirements and actively plan for the augmentation of their existing water resources for the systems where the future water requirements will exceed the safe yields of the existing resources. The raising of the Garden Route dam spillway by 2.5 metres was started on the 13th of May 2019 and completed during December 2019. The total storage capacity of the Garden Route dam was increased by approximately 25% to 12.5 million m³. This project increased the safe yield of the George/Wilderness system. The Municipality is also busy with the planning for the rehabilitation of the Kaaimans raw water pump station and the refurbishment of the Outeniqua reclamation plant, which will further improve the assurance of supply. A groundwater

testing pilot project is also being implemented. George Municipality's Bulk Raw Water Resource Study was completed during June 2024, which investigated various augmentation schemes for the George, Wilderness, Uniondale and Haarlem systems. Comprehensive Operational and Compliance Water Quality and Final Effluent Monitoring Programmes are implemented by George Municipality. The industrial effluent of all industrial consumers are also monitored by George Municipality. The Municipality performed mostly "Excellent" with regard to their Water Quality Compliance for the last number of financial years, according to the SANS 241:2015 classification.

A comprehensive Performance Management System and Customer Services and Complaints system are in place. A Service Delivery Charter is also in place. George Municipality's WSDP was updated during the 2019/2020 financial year. The required Policies and Bylaws for water and sanitation provision are in place. The Municipality updated their Water Services By-laws during the 2022/2023 financial year. The updated Water Services By-laws went through a Public Participation Process, but still needs to be approved and promulgated.

The Water and Sewer Master Plans are regularly updated and used to guide all future water and sewerage infrastructure planning. WSDP Performance- and Water Services Audit Reports are compiled annually, as required by the Water Services Act, and approved with the Municipality's Annual Report. The Municipality compiled detail WTW and WWTW Process Audits for all their treatment plants during 2022/2023. The Water Safety Plans and Wastewater Risk Abatement Plans were also updated during the 2022/2023 financial year. The Water Safety Plans were again updated during the 2023/2024 financial year.

The Municipality has maintained a high and consistent level of service to its urban water consumers. After hours emergency requests are being dealt with by the control room on a twenty-four hour per day basis. Requests are furthermore captured on an electronic mail or works-order system to ensure the execution thereof.

George Municipality performed excellently with regard to DWS's 2023 Blue Drop Assessment, with an overall Blue Drop Score of 94.95%. The Blue Drop Risk Ratings for all four systems were in the low-risk category (<50%). The George System received Blue Drop status with a score of 95.15%. The Blue Drop scores were supported by an excellent site assessment score of 84% for the New George WTW.

George Municipality achieved a "Good" score of 82% for the 2023 No Drop Assessment and was acknowledged as one of the top performing WSAs in the country.

George Municipality is also performing well with regard to wastewater quality management, with an overall Green Drop Score of 74% for DWS's 2021 assessment. The Green Drop Scores for the six WWTWs and drainage systems were between 64% and 80%. The 2023 Green Drop Risk Ratings were also received in 2023. The overall Cumulative Risk Rating for George Municipality was 58.6% (Medium Risk). The Wastewater Risk Ratings were at low risk (<50%) for the Haarlem, Herolds Bay and Kleinkrantz WWTW and at medium risk for the Gwaing, Outeniqua and Uniondale WWTW (50% - <70%).

4.3.12 Bulk Raw Water Resources Study

George Local Municipality (LM) is responsible for the water supply to the town of George including Pacaltsdorp, Thembalethu, Herold's Bay, Wilderness, Kleinkrantz and Hoekwil as well as two outlying communities, namely, Uniondale and Haarlem among others, all located on the south coast of the country.

In order to address the growing raw water demands, the Municipality has initiated this Bulk Raw Water Resource Study (BRWRS) in 2022 with a view to investigate and identify the most suitable solution for the provision of bulk raw water to the

George LM. The broad aim is to secure raw water supply for a 50-year horizon.

Water Demand

Context

As per the the 2022-2027 Integrated Development Plan , the 2022 estimates were that the Municipality has a population of 224,015 residents in 57,793 households. The 2022 census data shows a considerably highly population figure closer to 300 000 and over 85,000 households. The international average gross water use is 173 liters per capita per day (lcd). The South African average is 237 lcd. At 173 lcd, George should have a total demand of less than 39 Mℓ/d, and at the national average of 237 lcd, it should have a total estimated demand of ±53 Mℓ/d. At the current AADD of 34 MℓD, the per capita consumption is thus well below the national average and within the national target.

George and Outling Areas

The current water demand in George is estimated at 34 Mℓ/d Average Annual Daily Demand (AADD) (12.4 Mm³/a), including ±33% distribution losses. This is approaching the available yield from the current supply system (16.7 Mm³/a), which includes the raising of the Garden Route Dam wall and the supporting Malgas and Kaaimans river pumping schemes. An analysis of the existing developed but unoccupied properties, and previous Spatial Development Frameworks (SDFs), with the assumption of a reduction in water losses to an aspirational 20%, indicates an additional 76 Mℓ/d AADD of supply may be required. At a historically matched growth rate of 2.7% - 3.0%, this can materialise in the next 40 to 50 years. The total estimated 45to 50 year horizon AADD for the entire George system (excluding Uniondale and Haarlem) is thus ± 110 Mℓ/d (40.2 Mm³/a).

Uniondale

The current AADD in Uniondale is ± 0.85 Mℓ/d. The known water consumption is ± 0.48 Mℓ/d, resulting in distribution losses of ± 44%. With the occupation of currently developed but vacant properties, the addition of anticipated future spatial developments, and a reduction in water loss to an aspirational 20% the total 45 to 50 year horizon AADD for the entire Uniondale system is estimated at 1.517 Mℓ/d.

Haarlem

The current AADD in Haarlem is ± 0.46 Mℓ/d. The known water consumption is ± 0.24 Mℓ/d, resulting in distribution losses of ± 48%. With the occupation of currently developed but vacant properties, the addition of anticipated future spatial developments, and the reduction in water loss to an aspirational 20% the total 45 to 50 year horizon AADD for the entire Haarlem system is estimated at 0.770 Mℓ/d.

Avontuur

The small community of Avontuur also falls within the study area, but they are self-sufficient in terms of water resources and thus not included in this study.

(Note: The theoretical unit water demands (AADDs) are inclusive of an aspirational 20% distribution loss, as agreed to for planning purposes by George LM Civil Engineering Services (CES) Directorate. In addition, treatment losses of 10% must be added for evaluation of water resource requirements.)

Other uses/users included in the study

Other water users that were included in the study, in the context of the regional hydrologic modelling done for this study,

are agriculture, environmental river releases, forestry and alien vegetation.

Existing bulk raw water sources

George system

Currently, the main surface water source for George is the Garden Route Dam (GRD), which is supplemented with river abstractions from the Kaaimans, Malgas and Touws Rivers. Alternative sources include the treated effluent plant located at the Outeniqua Wastewater Treatment Works (WWTW) as well as a number of boreholes, both these sources however do not provide any raw water to the system currently.

There are three water treatment works in the system, namely: Old WTW's, New WTW and Ebb-and-Flow WTW in Wilderness.

The basic integration of the various raw water supply sources in George is as follows:

- The Garden Route dam, located on the Swart River, has a storage capacity of 12.5 million m³. Raw water from the dam is pumped to the balancing dams at the George New WTW at a maximum rate of 1000 L/s, however, the abstraction from the dam is limited to a licensed 16.4 Mm³/a (44.9 Mℓ/d), which includes the Kaaimans allocation described further below.
- The Kaaimans River pump station diverts flow from the Kaaimans river and transfers it into the Garden Route dam at a maximum rate of 230 L/s (20 Mℓ/d). The George LM currently has an abstraction license of 2.77 Mm³/a (7.6 Mℓ/d). The pump station is currently being refurbished.
- The Malgas River pump station abstracts flow from the Malgas River at a point just upstream of the Montagu Pass bridge and transfers it directly to the balancing dams at George New WTP at a rate of 230 L/s (20 Mℓ/d). The George LM currently has an abstraction license of 4.20 Mm³/a (11.5 Mℓ/d) in place.
- The 10 Mℓ/d Ultra Filtration effluent reuse scheme at the Outeniqua Wastewater Treatment Works (WWTW) transfers treated effluent back to the Garden Route dam, as an indirect water re-use scheme. This plant requires upgrading and refurbishment and is currently not in operation.
- The Touw River abstraction provides water to Wilderness, Kleinkrantz, Hoekwil and Touwsrante via the Ebb and Flow WTW and is augmented by transfers from the Garden Route Dam as required.
- Groundwater has been used to a very limited extent by the George Municipality. Three boreholes drilled during the drought of 2009 / 10 were equipped and brought into production, with the idea of delivering their yields to the new WTW. Interference between the boreholes prevented the expected yields being realised and currently does not provide any raw water to the scheme.
- The Swart River Dam is a concrete arch dam with a net storage capacity of 0.73 million m³. The dam was in use until approximately 1995. Water was supplied by gravity to the old WTW via two pipelines, a 200/150 mm diameter cast iron pipe and a 300/225 mm diameter fibre cement pipe, both 5.4 km long. The dam is currently leaking significantly and is thus not being used due to its poor condition and the poor condition of the pipelines. This scheme is not considered further in this study.

Uniondale and Haarlem

The Uniondale and Haarlem villages are supplied with bulk water from the broader Kammanassie and Kouga river systems respectively. The ephemeral nature of rainfall in these areas mean that water supplies are supported via bulk raw water storage in the form of the Uniondale Dam and the Haarlem Irrigation Dam.

The Uniondale water supply system relies on the Kammanassie weir and the Uniondale Balancing dam. Raw water gravitates from the inlet works at the Kammanassie Weir via a pipeline to the Uniondale Balancing Dam and WTW. Uniondale has an allocation of 0.57 Mm³/a from the Holdrif / Kammanassie River which is abstracted from the Kammanassie Weir. There is flexibility to accommodate additional water by making transfers from the Haarlem Dam when required to meet the water demands.

The Haarlem dam plays a crucial role in supplying water to the Haarlem community. The dam is owned and operated by the local irrigators who abstract water from the dam via a dedicated pipeline. A tee-off from this pipeline is used to supply the town of Haarlem's WTW at a limited rate of 10 L/s.

Additional bulk water resource schemes considered for this study.

The following augmentations of the bulk water resources for George LM were considered in this study:

- Dam on the Malgas River (Malgaskraal Dam)
- Dam on the Maalgate River
- Dam on the Kaaimans River
- Dam on an unnamed tributary of the Touw River (off-channel)
- Re-use of treated effluent (at Outeniqua WWTW with augmentation from Gwaiing WWTW)
- Desalination at Kleinkrantz
- Desalination at Gwaiing River mouth
- Groundwater scheme for George (Table Mountain Group Aquifer)
- Groundwater boreholes for Uniondale (Table Mountain Group Aquifer)
- Groundwater boreholes for Haarlem (Table Mountain Group Aquifer)
- Regional scheme with Mossel Bay (Wolwedans Dam)
- Regional scheme with Knysna
- Water Conservation & Water Demand Management (WCWDM has not been examined in any detail in this study as a new potential resource since it has already been effectively maximised by the George Local Municipality.)
- Clearing of alien vegetation (The impact of Invasive Alien Plants (IAPs) clearing on the system yield is marginal, due to recent veld fires, but is worth considering due to a low implementation cost and the consideration that letting alien vegetation unchecked will result in a negative incremental yield.)

The proposed sites and schemes were screened from an environmental perspective to provide confidence regarding the feasibility of the sites in terms of environmental risks and to inform future Environmental Impact Assessment (EIA) or Basic Assessment (BAR) processes (if found to be applicable). The environmental screening was based on available desktop information and was not informed by site visits or any inputs from environmental specialists and detailed field studies. The desktop screening considered the following criteria:

- Protected/Conservation Areas
- Critical Biodiversity Areas (CBA) and Ecological Support Areas (ESA)
- Aquatic features (watercourses and wetlands)
- Vegetation type according to the 2018 National Vegetation Map and ecosystem threat status
- Presence of settlements
- Heritage sensitivity (high level based on known information)
- Agriculture

Spatial screening was not considered a necessity in the context of this study for the desalination, ultra-filtration, groundwater sources or re-use options at waste-water treatment works, or pumping schemes already implemented.

Yield Analysis

Yield modelling was conducted to update and extend the available system analyses of the George, Uniondale, and Haarlem Water Supply Systems (WSSs). This is to reflect the current day situation and investigate future augmentation options to increase the system yield to meet future target water requirements within a 45 to 50-year planning horizon. System analyses were conducted by means of the Water Resources Yield Model (WRYM) developed for the George system and an in-house Excel-based water balance model for the smaller Uniondale and Haarlem systems.

4.3.12.1 Water Master Plan

Background

The Water Master Plan describes the study undertaken with respect to the updating of the master plan for the water distribution systems (bulk and reticulation) of the George Local Municipality (GLM).

The project entails the establishment of computer models for all the water networks in the municipal area (bulk and reticulation), the linking of these models to the stand/erf and water meter databases of the treasury's financial system, evaluation and master planning of the networks, and the posting of all information to the IMQS web viewer.

The existing models, master plan future models, and reports are continuously updated as part of a bureau service. The detailed reports that were completed in 2024 are available from the Civil Engineering Services Directorate.

The planning horizon of the water distribution system is aligned to the bulk raw water resource study, the associated water loss percentages and growth rates.

Water Treatment Works

The George system including Wilderness & surrounding areas, Pacaltsdorp, Thembaletu and Herold's Bay has three water

treatment works (WTW) serving two main zones, namely George main zone and Blanco main zone. The George main zone supplies 4 sub-zones namely Kraaibosch, Thembaletu, Pacaltsdorp, and Herold's Bay.

Part of Wilderness is supplied from the Kraaibosch sub-zone, and the rest from the Akela/Wilderness main zone which is fed by the Ebb-and-Flow WTW.

Uniondale, Haarlem and Avontuur are all supplied from their own WTW/filter via their own single main zone.

The current capacities of the various WTW's in the entire system are indicated below:

■ George Old WTW	:	18 Mℓ/d
■ George New WTW	:	20,00 Mℓ/d (being extended to 40Mℓ/d)
■ Ebb-and-Flow WTW	:	1,700 Mℓ/d
■ Uniondale WTW	:	1,500 Mℓ/d
■ Haarlem WTW	:	1,000 Mℓ/d
■ Avontuur Filters	:	1,260 Mℓ/d
■ Total capacity	:	45,960Mℓ/d

The main and sub-zones are also shown on Maps available at The Directorate: Civil Engineering Services.

The detailed analysis of the processes and hydraulic performances of the existing WTW's is not included in this study, however the future water demand as discussed in section 4.3.14 of this report will result in the proposed upgrades to the WTW's to provide adequate potable water to the system as follows:

■ George Old WTW	:	18 Mℓ/d (no change in capacity envisaged)
■ George New WTW	:	Upgrade from 20.0 to 115.0 Mℓ/d (4 phases)
■ Ebb-and-Flow WTW	:	1.7 Mℓ/d (no change in capacity envisaged)
■ Uniondale WTW	:	Upgrade from 1.5 to 2.3 Mℓ/d (1 phase)
■ Haarlem WTW	:	Upgrade from 1.0 to 1.2 Mℓ/d (1 phase)
■ Avontuur Filters	:	1.26 Mℓ/d (no change in capacity envisaged)
■ Total future capacity	:	141.96 Mℓ/d

Reservoirs, pump stations and pipelines

The entire George LM water system currently consists of 36 reservoirs (representing ± 50hours of the present AADD including ± 20% water losses), 3 water towers, 30 pump stations, 1 033km pressure pipelines (bulk and reticulation). These listed figures excludes reservoirs, towers and pump stations currently in construction.

4.3.12.2 Water Treatment Works

The total WTW capacity of the systems in GLM treating, from own raw water resources, is roughly equal to 1.4 x the present annual average daily demand (AADD) of $\pm 34 \text{ M}\ell/\text{d}$ (incl. $\pm 20\%$ UAW).

However, the analysis of the processes and hydraulic performances of the existing GLM WTP's is beyond the scope of the master plan, and the required future capacities of the WTP's resulting from this study are as follows:

- George Old WTP : Upgrade from 20.5 Mℓ/d (will remain)
- George New WTP : Upgrade from 20.0 to 112.0 Mℓ/d (4 phases)
- Ebb-and-Flow WTP : 1.7 Mℓ/d
- Uniondale WTP : Upgrade from 1.5 to 2.2 Mℓ/d (1 phase)
- Haarlem WTP : Upgrade from 1.0 to 1.1 Mℓ/d (1 phase)
- Avontuur Filters : 1.26 Mℓ/d
- Total future capacity : 143.26 Mℓ/d

Reservoirs (Tanks and Water Towers)

There are 36 reservoir/tank sites (55 reservoirs/tanks) in the GLM supply systems. The total storage capacity in the GLM reservoirs amounts to $\pm 68.0 \text{ M}\ell$, which represents $\pm 51 \text{ h}$ of the present estimated AADD (incl. $\pm 20\%$ UAW).

The 3 water towers have a total capacity of $\pm 1.5 \text{ M}\ell$.

The required works to reinforce the systems for existing and potential future deficiencies are shown on summarized below for the following distribution zones:

- Blanco main zone : 3 New reservoirs (additional capacity of 8.1 Mℓ)
- George main zone : 2 New reservoirs (additional capacity of 25.0 Mℓ)
- Herold's Bay sub-zone : 1 New reservoir (additional capacity of 1.3 Mℓ)
- Kraaibosch sub-zone : 2 new reservoirs (additional capacity of 8.0 Mℓ)
- Pacaltsdorp sub-zone : 3 New reservoirs (additional capacity of 31.5 Mℓ)
- Thembaletu sub-zone : 2 New reservoirs (additional capacity of 8.0 Mℓ)
- Akela and Wilderness main zone : 3 New reservoirs (additional capacity of 4.0 Mℓ)
- Uniondale main zone : 2 New reservoirs (additional capacity of 1.0 Mℓ)

4.3.12.3 Water Services Development Plan (WSDP) Implementation

4.3.13 Sewerage Master Plan

Background

The Sewer Master Plan describes the study undertaken with respect to the updating of the master plan for the sewer distribution systems (bulk and reticulation) of the George Local Municipality (GLM).

The project entails the establishment of computer models for all the sanitation networks in the municipal area, the linking of these models to the stand and water meter databases of the treasury's financial system, evaluation and master planning of the networks, and the posting of all information to the IMQS viewer.

The existing models, master plan future models and reports are continuously updated as part of a bureau service. The following detailed reports that were completed in 2024 are available at the Civil Engineering Services Directorate.

Wastewater Treatment Works

The GLM sewer system can be divided into 8 main drainage areas. There are 5 WWTWs in the George system excluding the privately owned Oubaai WWTW and 1 each in Uniondale and Haarlem with the following capacities:

■ Gwaing WWTW	:	11.00 Mℓ/d (planning underway to upgrade to 22Mℓ/d)
■ Outeniqua WWTW	:	25.00 Mℓ/d
■ Herold's Bay WWTW	:	0.300 Mℓ/d (Maturation ponds, estimated)
■ Breakwater Bay WWTW	:	0.170 Mℓ/d
■ Kleinkrantz WWTW	:	2.500 Mℓ/d
■ Uniondale WWTW	:	0.800 Mℓ/d
■ Haarlem WWTW	:	0.156 Mℓ/d
■ Total capacity	:	39.926 Mℓ/d (excl. private capacity)

The present annual average daily demand (AADD) for the existing erven in the GLM system that contributes to the domestic sewer flow is ± 29 Mℓ/d, which includes 10% unaccounted-for-water (UAW).

From this, the peak daily dry weather flow (PDDWF) for the George system is estimated at ± 28.9 Mℓ/d, (excl. WTP sludge flow) or roughly 89% of the AADD. The sewer flow is distributed as follows in the 8 main drainage areas:

■ Gwaing WWTW	:	10 Mℓ/d
■ Outeniqua WWTW	:	18.20 Mℓ/d (incl. WTP sludge flow = 1.26 Mℓ/d)
■ Herold's Bay WWTW	:	0.25 Mℓ/d
■ Breakwater Bay WWTW	:	0.08 Mℓ/d
■ Kleinkrantz WWTW	:	0.82 Mℓ/d
■ Uniondale WWTW	:	0.30 Mℓ/d
■ Haarlem WWTW	:	0.11 Mℓ/d
■ Oubaai WWTW	:	0.49 Mℓ/d (Private)

- Total PDDWF : 29.76 Mℓ/d (excl. private flow)

The detailed analysis of the processes and hydraulic performances of the existing WWTW's is not included in this study, however the future sewer flows linked to the potwble water demand will result in the proposed upgrades to the WWTW's to provide efficien caacity to treated wastewater as follows:

- Gwaing WWTW : 33.7 Mℓ/d
- Outeniqua WWTW : 41.7 Mℓ/d
- Herold's Bay WWTW : 0.8 Mℓ/d
- Breakwater Bay WWTW : 0.1 Mℓ/d
- Kleinkrantz WWTW : 2.37 Mℓ/d
- Uniondale WWTW : 1.09 Mℓ/d
- Haarlem WWTW : 0.65 Mℓ/d
- Oubaai WWTW : 0.51 Mℓ/d (Private)
- Total PDDWF : 80.41 Mℓ/d (excl. private flow)

Pumping Stations, rising mains and gravity pipelines

The entire George LM sewer system currently consists of 113 pump stations, 71km rising mains (pressure pipelines) and 857km gravity pipelines. These listed figures excludes pump stations, rising mains and gravity pipelines currently in construction.

The proposed infrastructure required to reinforce the systems for existing deficiencies and potential future demands are summarized below:

- Upgrade gravity sewers : 20.5km
- Upgrade existing pump stations : 38 (24 pump stations to be decommissioned)
- Upgrade existing rising mains : 13.5km
- Construct new gravity sewers : 149.3km
- Construct new pump stations : 37
- Construct new rising mains : 52.1km

4.3.13.1 Municipal Strategic Self-Assessment (MuSSA) for Water Services

Overseen by the DWS the MuSSA conveys an overall business health of municipal water business and serves as a key source of information around municipal performance. The MuSSA also identifies key municipal vulnerabilities that are strategically important to DWS, the Department of Cooperative Government (DCoG), National Treasury, the planning Commission/Office

of the Presidency, the South African Local Government Association (SALGA) and the municipalities themselves. The MuSSA team continues to engage (1) DWS directorates and their associated programmes (e.g. Water Services Development Plan, Water Services Regulation), and (2) other sector departments and their associated programmes (e.g. LGTAS, MISA) to minimize duplication and ensure alignment. Through the tracking of current and likely future performance, the key areas of vulnerability identified, allow municipalities to effectively plan and direct appropriate resources that will also enable DWS and the sector to provide more effective support.

George Municipality's Vulnerability Index for 2023 was indicated as 0.26 "Moderate Vulnerability". The only area of concern evident from the 2023 assessment was Financial Asset Management. The capital expenditure relative to the Capital and Operation Expenditure (Combined expenditure) is influenced by the high capital budget. The George Council is committed towards investing in Water and Sewer Services Infrastructure to cater for future development and growth requirements. The George Municipality also mainly rely on Grant Funding. George Municipality recently received a BFI Grant fund from the Department of Water and Sanitation for the upgrading of the new water treatment facility and three of our main sewer pump stations.

4.3.14 Roads Master Plan

The Roads Master Plan for George was developed in 2005 for a period of 15 years to address short- and medium-term needs to be implemented through 9 phases driven by budgets and development.

The updating of the roads master plan for the George Municipality commenced at the end of 2023 and will be developed for a short-, medium-, and long-term horizon considering the municipal road network, strategic road links, assess environmental and social impacts for identified links and incorporating all transportation modes including non-motorised transport. The plan follows the development of the Comprehensive Integrated Transport Plan (CITP) to inform on the prioritization of important road linkages, considers road classification and re-classification, strategic environmental and social assessments of proposed roads, spatial planning consideration and focus area determination, scheduling of future road infrastructure, and cost estimates.

The first order municipal stakeholder workshops will be held at the end of 2024 and early 2025 to discuss strategic road linkages in developing the roads master plan over the next 2 years, with a planned completion date towards the end of 2025.

4.3.15 Roads Pavement Management Plan

The road asset management guides the development of the road network maintenance strategies within the background of a technically sound prioritisation approach. The road asset management provides a framework within which the road network maintenance planning may be carried out. Road asset management is essentially a road network planning tool which offers a prospect of significantly improving road networks by development of decision-making tools to assist roads agencies and local municipalities. Key areas include assessment of the effects of constant road use on the road network in terms of road condition both from the technical and from the road user's perspective. The plan provides a systematic approach to the management of transportation networks, including new networks. The plan includes gravel, flexible and rigid paving throughout the municipal roads network and provides recommendations. Prioritisation of the 5-year budget is compiled from the plan and includes road resealing, rebuilding, surfacing of existing gravel roads etc.

The George municipality Roads Pavement Management Systems was completed in February 2020 and will be tabled at the next Section 80 Committee for final approval and before approval of the 2020/21 IDP and budget.

This condition assessment report will serve at the Civil Engineering Services Section 80 Committee in April 2020 for approval. It is done at network level, flagging the most urgent surface and rehabilitation priorities on the routes. The information is intended to support further project level assignments that will include more detailed investigations to come up with pavement rehabilitation and surfacing designs. The data also assist to focus further testing requirements, which would be costly if done at a network level.

The project brief accepted the following for the pavement assessments:

- Visually inspect the pavements within the George Local Municipality in a phased manner Starting with the Go George Bus routes and ending with the peri-urban towns.
- Assess the condition of the mostly lower order residential streets.
- Report on the above to inform project level planning of rehabilitation strategies and actions.
- Table: Road length by road surface type in the George LM (Excl. bus routes)

The present status of the road inventory is shown in the table below. It shows the length of the various roads by surface type. This is a common way of representing the roads inventory as the maintenance actions are also grouped per road surface type

Table 38: Roads by surface type

Town	Road Type					Grand Total
	Paved-Flexible	Paved Block	Paved Concrete	Gravel	Earth	
George	223.4	21.8	3.3	3.0	0.0	251.5
Haarlem	0.3	3.0	0.0	16.7	0.0	20.1
Herolds Bay	5.1	1.6	0.4	0.0	0.0	7.0
Kleinkrans	7.3	0.0	0.0	1.0	0.0	8.6
Pacaltsdorp	27.6	20.5	0.0	3.7	0.0	51.8
Thembaletu	13.7	21.0	0.4	31.3	0.0	66.3
Touwsranten	4.5	1.4	0.0	0.0	0.0	5.9
Uniondale	5.8	3.2	0.0	12.3	0.0	21.4
Wilderness	16.9	7.6	0.2	23.6	0.0	48.3
Grand Total	304.6	80.0	4.3	91.6	0.3	480.8

Table 39: Overall Road Replacement cost and % remaining life

Town	Sum of Area	Sum of CRC	Sum of DRC	Ratio DRC/CRC
George	5 271 869	R 931 765 102	R 600 961 303	64%
Haarlem	275 173	R 64 347 277	R 31 160 401	48%
Herolds Bay	235 064	R 43 180 940	R 25 709 199	60%
Kleinkrans	223 755	R40 350 079	R 21 207 443	53%
Pacaltsdorp	1 337 597	R 251 912 566	R 165 759 828	66%
Thembaletu	1 174 057	R 242 071 400	R 138 674 121	57%
Touwsrante	187 921	R 34 165 316	R 22 471 163	66%
Uniondale	415 588	R 85 886 536	R 43 207 666	50%
Wilderness	1 059 660	R 214 21 079	R 115 530 024	54%
Grand Total	10 180 684	R 1 908 000 298	R 1 164 681 147	61%

The total asset replacement cost of roads in the George is some R 1.908 billion. At an industry recognised asset maintenance tempo of 2.5% per year the road maintenance budgets should be of the order of R47.7 million per year. The total operational budget for street and stormwater combined was approximately R100.3 million and well above the recommended 2.5%. The detailed report is available from the Civil Engineering Services directorate.

4.3.16 Stormwater Master Plan

Objectives

The purpose of the stormwater master plans is to address stormwater issues whilst considering the impact of both the public and natural environment. Operational and hydraulic deficiencies are to be identified and remedied where possible.

The objectives of the master plans are to:

Evaluate the effectiveness of existing stormwater infrastructure located within the focus areas under both minor (1:5 year) and major (1: 50 year) rainfall events

Liaise with relevant municipal officials and local residents as to historical events and maintenance issues.

Incorporate documentation and available data

Identify tributary drainage areas and discharge routes

Performing a desktop study on factors impacting catchment characteristics (land use, infiltration & future developments)

Develop a hydrologic model incorporating the conceptual design of infrastructure upgrades

Perform floodline analysis where development border water courses

Status Quo

This stormwater masterplan for various areas within the George Local Municipality was developed in 2011 and 2018. The master plans developed did not include Herolds Bay, Thembaletu zones 3 to 8, Uniondale, Haarlem, Wilderness, and Kleinkrantz.

Masterplans have been developed during 2022 and 2024 for portions of Herold's Bay as well as for Thembaletu zones 3 to 8, Uniondale, Haarlem, Wilderness, and Kleinkrantz

The development of the master plans addresses the following topics:

Catchment and sub-catchment determination

- Stormwater system analyses per catchment and sub-catchment (i.e. modeling)
- Existing Stormwater management system information capturing
- Noting problematic areas
- Preliminary concept of new stormwater infrastructure required and the associated cost
- Preliminary concept of upgrades to the existing stormwater system and associated cost

Methodology and Planning Philosophy

The methodology and the study were executed (i.e. the methods employed) and what the various investigations and analyses yielded (i.e. the findings). The conclusions reached from the various investigations are presented as the Stormwater Master Plan.

In general, the philosophy seek to provide an optimal design which maintains a balance between the cost of infrastructure and the cost of potential damage. In some cases, localized incidences of the past or on-site conditions may require a deviation to the norm such as enlarged or mitigating structures.

It should be noted that the methodology for each area has a site-specific strategy that is developed to perform modelling on each catchment and sub-catchment.

Master plan outcome

In general, the plan includes upgrades necessary to address stormwater issues related to the upgrade of current infrastructure, implementation of new infrastructure to address upgrades generally in the system or for future development, upgrading for the protection of property and human life, registration of servitudes and problematic areas noted during investigations.

In addition, the master plan for each area and its associated catchments and sub-catchments includes the cost estimate for all upgrades proposed in the master plan to inform planning and capital budget requirements. The principles behind the cost is identified as either high or low priority, higher priority being to address operational issues typically where flooding of properties or damage to infrastructure may occur and low priority items which in most cases would be located upstream of high priority areas.

4.3.17 Environmental Management and Conservation

Environmental Situational Analysis

The George Municipal area covers an area of 5191 km² and spans the Southern Cape and Little Karoo regions of the Western Cape Province. The Outeniqua Mountains is an important geographical feature and is a natural barrier that creates distinct climate zones within the municipality which is relevant to climate change impacts. The southern region of the mountain range receives year-round rainfall, resulting in a Mediterranean climate with lush vegetation and rich biodiversity. In contrast, the northern regions experience a semi-arid climate, with higher temperatures and lower rainfall due to the rain shadow effect caused by the mountains.

Outeniqua Strategic Water Source Area

The George Municipal area has many natural assets that are of regional, national and international importance. The Outeniqua Mountains is a natural ‘water tower’ that stores and releases water to downstream areas to sustain environmental and human water demands. The Outeniqua mountain range and its catchments is a water source for agricultural domestic, and industrial activities in the municipality but is also of national importance as a strategic water source area for the country.

Garden Route National Park

The Garden Route National Park (GRNP) is a cornerstone of the natural landscape in the George Municipal area. The park includes ecosystems such as Afrotropical forests, fynbos-dominated landscapes, estuaries, and coastal zones. The Park contributes to biodiversity conservation as part of the Cape Floristic Region (CFR), a UNESCO World Heritage Site and global biodiversity hotspot. The ecosystems in the GRNP contribute to ecosystem stability through their roles in soil stabilization, nutrient cycling and pollination. The GRNP also contributes to regional hydrology by regulating water flow and quality in catchment areas of the Outeniqua Strategic Water Source Area. The wetlands and forested catchments mitigate the impacts of extreme hydrological events such as floods and droughts, while simultaneously ensuring water provision for downstream

urban and agricultural communities. The GRNP's extensive indigenous forests are significant carbon sinks, contributing to climate regulation by sequestering atmospheric carbon dioxide. The Wilderness Lakes which falls within the GRNP, was designated on 28 June 1991 as a Ramsar Site (site no 524). A Ramsar site is a wetland that has been designated as internationally important under the Ramsar Convention. The Wilderness Lakes area covers 1,300 ha and includes the estuarine lakes of Rondevlei, Langvlei and Eilandvlei, and the Serpentine channel as well as a dune system with associated thickets, woodlands, marshes, and reedbeds. Important locally migrant resident birds as well as staging and breeding birds use the site, which supports at least 285 native plant species, 32 fish species (several of which use the site as a nursery area), and a diverse array of marine and estuarine invertebrate fauna.

Cape Floristic Region

The majority of the George Municipal area is located in the Cape Floral Region, which is recognised as one of the most special places for plants in the world in terms of diversity, density and number of endemic species. The CFR is a highly distinctive phytogeographic unit which is regarded as one of the six Floral Kingdoms of the world and is by far the smallest and relatively the most diverse. The Cape Floral Region is one of the richest areas for plants when compared to any similar sized area in the world. It represents less than 0.5% of the area of Africa but is home to nearly 20% of the continent's flora.

Garden Route Biosphere Reserve

The Garden Route Biosphere Reserve (GRBR) is located along South Africa's southern coastline, spanning parts of the Western and Eastern Cape provinces. It includes areas around George, with the town itself lying near the heart of the biosphere reserve. George is surrounded by key features of the GRBR, such as the Outeniqua Mountains, indigenous forests, and the Garden Route National Park, making it an integral part of this globally significant region.

The GRBR was officially designated by UNESCO, the United Nations Educational, Scientific, and Cultural Organization, in 2017. UNESCO is an international body that promotes peace and sustainable development by fostering global collaboration in education, science, culture, and environmental conservation. Biosphere reserves are areas recognized by UNESCO for their ecological value and are managed to balance conservation, development, and education.

The GRBR aims to protect the region's rich biodiversity, promote sustainable land use, and foster climate resilience. Its zones include protected core areas, buffer zones for low-impact activities, and transition zones where communities engage in eco-friendly practices. This balance ensures the long-term preservation of the natural and cultural heritage that makes the Garden Route unique.

Coastal Environment

The municipality's coastline is characterised by steep cliffs, rocky shores, sandy beaches, and dunes that provide habitat for marine species and protection against coastal erosion. The rocky outcrops between Herolds Bay and Victoria Bay belong to the Table Mountain Group, which originated from the late Proterozoic to early Paleozoic periods (around 500 million years ago). The region's tectonic history has contributed to the uplift of these rock layers, which have since been shaped by erosion, wave action, and coastal processes.

In contrast, the coastline between Wilderness and Sedgefield is characterized by a low-relief wave-cut platform, formed during the Pleistocene high sea stand approximately 125,000 years ago. This area is now characterized by Quaternary sand and dune systems. Quaternary sand and dune systems are inherently unstable over short timescales due to ongoing wind action and occasional storm events. Wind continuously shapes and reshapes dunes, redistributing sand within the system. These systems

are sensitive to climate variations. Changes in precipitation patterns and wind strength can significantly impact dune stability. Dunes can expand during periods of increased sand supply and stabilizing vegetation or erode during drier, windy periods.

Threats to the natural environment

The George Municipal Area is characterised by its unique and ecologically sensitive natural environment, which provide valuable ecosystem services. At the same time, the city faces significant environmental challenges, which are exacerbated by urban growth and the pressures of development.

- The city is experiencing substantial urban and rural growth, driven by population growth and increased demand for housing and business opportunities. As a consequence, substantial pressure on finite natural resources, including water, energy and land. The demand for development competes and often conflicts with the need to conserve critical natural spaces, which results in unsustainable resource use and loss of biodiversity.
- The municipal is vulnerable to natural hazards like wildfires, coastal erosion, flooding, and extreme weather events. Climate change exacerbates these risks, particularly along the coast where rising sea levels and storm surges threaten communities, infrastructure and biodiversity. The George MSDF documents the need for adaptive management strategies to mitigate these risks and protect the environment.
- George's natural and cultural landscapes are part of its identity and economic attraction. However, balancing conservation with the demand for urban expansion remains a challenge. The MSDF highlights the need to protect key biodiversity areas and cultural heritage sites while facilitating responsible development for economic growth.

To address these challenges, the George Municipality must pursue integrated planning approaches that promote sustainable land use, protect biodiversity and enhance the resilience of its natural and built environments. This includes protecting high biodiversity areas, restoring degraded areas and implementing green infrastructure projects that support long-term ecological and community health. In this vein several projects have been initiated for the 2024/2025 financial year and additional projects are proposed in the 2025/2026 financial year.

Environmental Management Strategy

Environmental Management must give effect to Section 24 of the Constitution of South Africa, which states:

“Everyone has the right to have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that prevent pollution and ecological degradation [and] promote conservation”.

An effective and appropriate strategy is central to city governance, long term planning and optimising resources to sustainably manage growth and urbanisation. Without an effective strategy, environmental governance becomes an ad hoc process without appropriate structure and frameworks. A strategy sets the principles within which an organisation itself wishes to operate and perform and the primary means through which an organisation outlines, articulates and communicates its position and direction to its employees, its customers (in the City's case its communities) and those it wishes to do business with (developers, investors and the global community). In addition, the strategy sets a transparent framework for the mechanisms and regulations required to achieve the organisation's articulated desired outcomes related to long-term environmental management.

The George Municipality at present does not have an environmental strategy. In the absence of this, the MSDF primarily guides sustainable development in the Municipality.

There are cross cutting local and regional environmental challenges and opportunities recognised in the MSDF. These include:

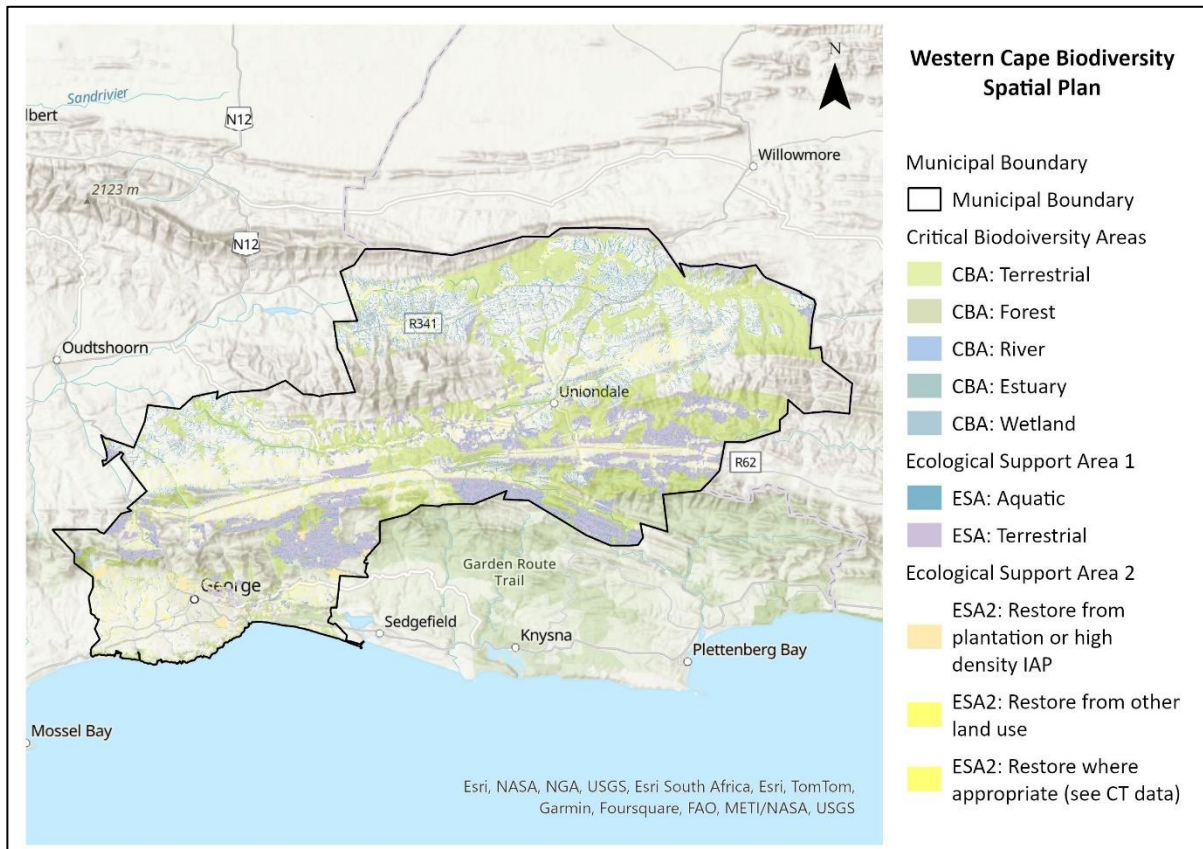

- The need to preserve the natural environment and scenic landscapes of the Southern Cape, together with the free goods and services that it provides to people and the economy through appropriate and contained management of urban development within Municipality.
- Ensuring water and food security, agriculture and forestry preservation.
- The need to reduce waste generation at a regional scale.

Land use planning and decision-making in the Municipality is informed and influenced by spatial data for natural resource management. The spatial data for natural resource management is derived from Environmental Legislation implemented by National and Provincial Departments. For George Municipality the responsible sphere of Government are the Department of Forestry, Fisheries and the Environment and the WCG: Department of Environmental Affairs and Development Planning, respectively.

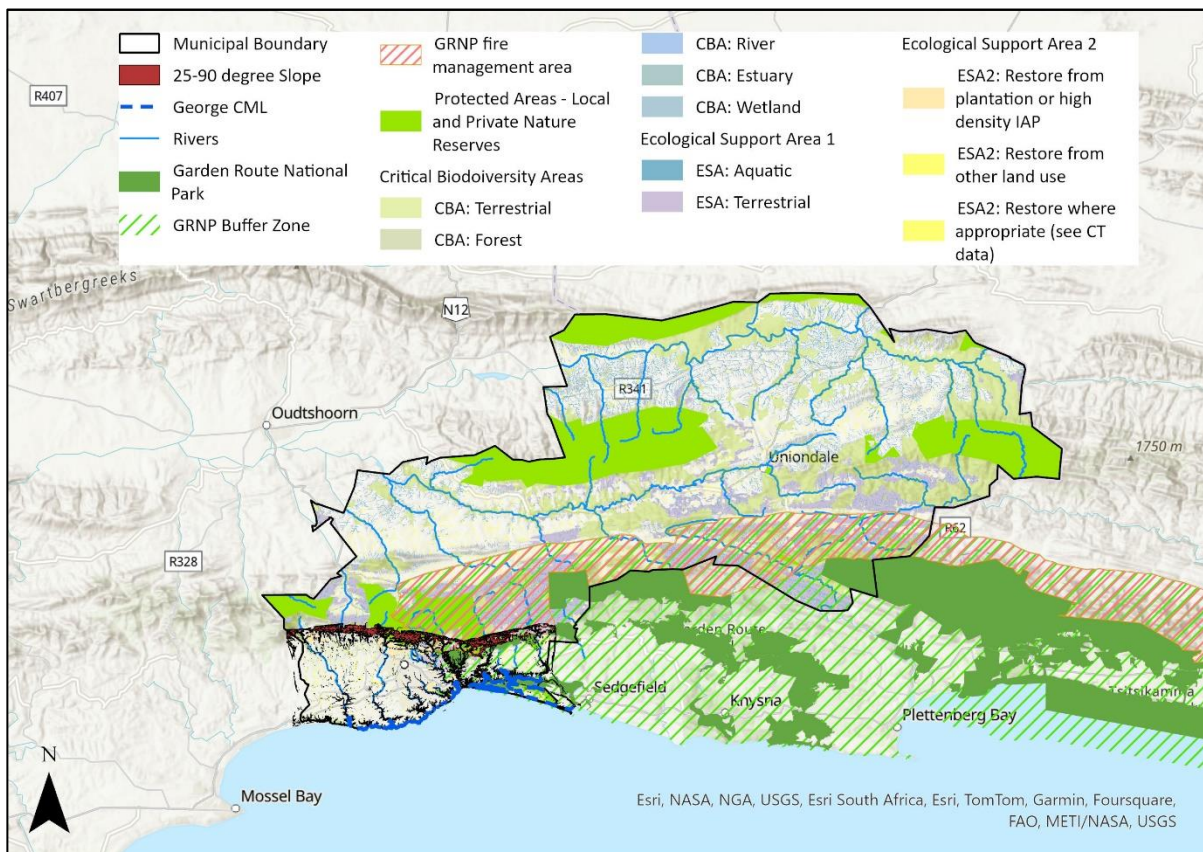

The following spatial data is captured on the George Municipal Viewer and used by Municipal Officials.

- i. The Western Cape Spatial Plan Map (2017) provides guidelines for land use planning and decision-making, and for land and resources management. The aim of these guidelines is to management biodiversity as required in Section 41(a) of the National Environmental Management: Biodiversity Act 10 of 2004 and the National Environmental Management Act 107 of 1998. Figure X shows the WC BSP within municipal boundaries and Figure Z shows a summary of the guidelines for each map category. The Western Cape Biodiversity Spatial Plan is currently being updated by CapeNature for its five-year review.
- ii. The Garden Route National Park (GRNP), GRNP Buffer Zone and expansion areas. The GRNP is regulated by the National Environmental Management: Protected Areas Act (NEM: PAP) 57 of 2003 and managed in accordance with the Garden Route National Park Management Plan 2020–2029. All activities within the park is managed by the South African National Parks -Wilderness Lakes Section. The buffer zone shows areas outside the park within which functional ecological corridors can improve the ecological integrity of the park or where activities i.e. transformation resulting from land use change, inappropriate development, invasive alien species, pollution and unmanaged fuel loads, can negatively affect the ecological integrity of the park. The George Municipality must ensure that all development within the buffer zone aligns with the management objectives of this zone.
- iii. Protected areas (local conservation areas and private nature reserves) shows properties that are managed according to requirements set out in the National Environmental Management: Protected Areas Act (NEM: PAP) 57 of 2003.
- iv. The Outeniqua Strategic Water Source Area provides 100% of water supplied to George and 94% of water in the Mossel Bay water supply scheme. The National Protected Areas Expansion Strategy seeks to fully protect (100%) the Outeniqua water source area. Land use transformation must therefore not adversely affect the ecological functioning of the area, and the George Municipality must ensure that it manages all alien invasive species on its properties to restore the hydrological functioning of the area.
- v. Rivers, floodplains and wetlands are derived from data generated by National Department of Water and Sanitation. This data is used to deter development in sensitive riparian areas and buffers.

- vi. George Coastal Management Line has been developed by the Department of Environmental Affairs and Development Planning in terms of Section 25(3) of the National Environmental Management: Integrated Coastal Management Act 24 of 2008. The CML line is used to assess coastal risk in land use decisions. DEA&DP is currently in the process of publishing the CML line for the Garden Route District in terms of Section 25(3) of the NEM:ICMA.
- vii. The Garden Route National Park Coastal Management Line has been published in Government No. R3668 of 14 July 2023. All new and existing infrastructure seaward of the CML are regulated to different extents by this line.
- viii. Steep areas with a slope gradient of 25% are used to identify areas where development is not supported due to risk of soil erosion, which can cause flooding, stream sedimentation, and slope instability.

LAND USE CATEGORIES		Conservation		Agriculture	Tourism and Recreational Facilities		Rural Accommodation		Urban		Business & Industrial		Infrastructure Installations								
		Proclaimed Protected Areas	Other Nature Areas	Intensive Agriculture	Extensive Agriculture	Low Impact Facilities	High Impact Facilities	Agri-worker Accommodation	Small Holdings	Urban Development & Expansion	Community Facilities & Institutions	New Settlements	Rural Business	Non-place-bound industry (low/moderate impact)	Non-place-bound industry (high impact)	Extractive industry (incl. Prospecting)	Linear - roads & rail	Linear - pipelines & canals	Linear - borewells	Other Utilities	
MAP CATEGORY	DESIRED MANAGEMENT OBJECTIVE	Y = Yes: Permissible land uses that are not likely to compromise the biodiversity objective						R = Restricted: Land uses that may compromise the biodiversity objective are only permissible under certain conditions (refer to Table 4.7 for conditions)						N = No: Land uses that will compromise the biodiversity objective and are not permissible							
Protected Area	Must be kept in a natural state, with a management plan focused on maintaining or improving the state of biodiversity.	Land use within proclaimed protected areas are subject to management plan drawn up for that specific protected area.																			
Critical Biodiversity Area 1	Keep natural, with no further loss of habitat. Degraded areas should be rehabilitated. Only low impact, business or sensitive and uses are appropriate.	Y	Y	N	R	N	N	N	N	N	N	N	N	N	N	N	N	N	R	N	
Critical Biodiversity Area 2	Keep natural, with no further loss of habitat. Degraded areas should be rehabilitated. Only low-impact, business or sensitive and uses are appropriate.	Y	Y	N	R	R	N	N	N	N	N	N	N	N	N	N	R	R	R	R	
Ecological Support Area 1: Terrestrial	Maintain in a functional, near-natural state. Some habitat loss is acceptable, provided the underlying biodiversity objectives and ecological function are not compromised.	Y	Y	N	R	R	N	N	N	N	N	N	N	R	N	N	R	R	R	R	
Ecological Support Area 1: Aquatic	Maintain in a functional, near-natural state. Some habitat loss is acceptable, provided the underlying biodiversity objectives and ecological function are not compromised.	Y	Y	N	R	R	N	N	N	N	N	N	N	N	N	N	R	R	R	N	
Ecological Support Area 2	Restore and/or manage to minimise impact on ecological infrastructure functions, especially soil and water related services.	Y	Y	N	R	R	N	N	R	N	N	N	N	N	N	N	R	R	R	R	
ONA: Natural to Near-Natural	Minimise habitat and species loss and restore ecosystem functionality through strategic landscape planning. Offers flexibility in permissible land uses, but some authorisation may still be required for high impact land uses.	Y	Y	R	Y	R	R	R	R	R	R	R	R	R	R	R	R	R	R	R	
ONA: Degraded	Minimise habitat and species loss and restore ecosystem functionality through strategic landscape planning. Offers flexibility in permissible land uses, but some authorisation may still be required for high impact land uses.	R	R	R	Y	Y	R	R	Y	R	R	R	R	R	R	R	Y	Y	Y	Y	
No Natural Remaining	These areas are suitable for development, but they still provide for biodiversity and ecosystem services and should be managed in a way that minimises impacts on biodiversity and ecological infrastructure.	R	R	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	

Biodiversity Management

In addition to development restrictions, the Environmental Spatial Data on the Municipal GIS guides the conservation and restoration of ecosystems for both Municipal and Private Property. The George Municipality also regulates scheduled activities

in the Outeniqua Sensitive Coastal Area, commonly known as the OSCA or OSCAE.

The Outeniqua Sensitive Coastal Area (OSCA) and Outeniqua Sensitive Coastal Area Extension (OSCAE) are designated coastal regions in the Garden Route District, which are characterised by unique and sensitive environmental features that require special management and protection.

The OSCA and OSCAE are regulated, respectively, by the:

- i. Regulations Regarding Identified Activities Concerning the Outeniqua Sensitive Coastal Area (GN R881 in Government Gazette 17213. Commencement date: 31 May 1996).
- ii. Identification of Activities Which May Have a Detrimental Effect on the Environment: Outeniqua Sensitive Coastal Area Extension Coastal Area (GN R1526 in Government Gazette 19493. Commencement date: 27 November 1998).

The OSCA and OSCAE Regulations are published under Section 26 of the Environment Conservation Act 73 Of 1989. The Regulations have been promulgated to give effect to Section 21 of the ECA to control activities which may have detrimental effects on the environment.

These activities, legislated as Schedule 1 Activities, comprise the following:

- Disturbance of vegetation: Trampling, cutting or removal of vegetation.
- Earthworks: Excavation, moving, removal, depositing or compacting of soil, sand, rock, or rubble.
- Dredging: Dredging, excavation, removal or moving of soil, sand or rock from a river, tidal lagoon, tidal river, floodplain or wetland.
- Dune stabilisation: Planting on, or covering with any vegetative, natural or synthetic material of, dunes or exposed sand surfaces, or the erection of structures and walls thereon with the purpose of preventing the sand from being eroded, accreted or moved by wind or water.

The Regulations prescribe a structured process for authorising Schedule 1 activities in the OSCA and OSCAE to ensure that potential environmental impacts are carefully assessed and mitigated.

In the 2025/2026 Financial Year, the Municipality intends to develop a Green Infrastructure Programme, which will incorporate current projects and initiate planned projects that have been identified in the previous IDP.

The Green Infrastructure Programme aims to:

- i. Be an informant to land-use planning and decision making; and
- ii. Become an approach that is integrated with traditional methods, to improve the impacts of urbanisation;
- iii. Develop best practice guidelines in support of green infrastructure;
- iv. Identify and map the city's green infrastructure assets and sites;
- v. Incorporate green infrastructure principles and approaches into Municipal policies and by-laws;
- vi. Promote and implement projects to protect, enhance or create green infrastructure;
- vii. Promote the reconnection of people and nature to endorse health and wellbeing.

Some of the current projects in development that will be included in the programme include the Wilderness Wildlife Corridors and George Stormwater Guidelines.

The stormwater management guidelines for the municipality aim to achieve the following, inter alia:

- Sustainable infrastructure promotion: Promote the integration of green infrastructure and a combination of green/grey infrastructure to reduce stormwater quantity and improve surface water quality for environmental and socio-economic co-benefits.
- Water sensitive urban design: Facilitate the development towards "sponge city" through water sensitive urban design principles.
- Reduce pressure on municipal systems: Reduce the pressure on municipal stormwater systems by promoting onsite retention, use, and infiltration of stormwater.
- Resource optimization: Encourage the efficient use and management of stormwater as a resource to support local water needs and ecosystem services.
- Community engagement and awareness: Enhance community understanding and involvement in sustainable stormwater management practices.

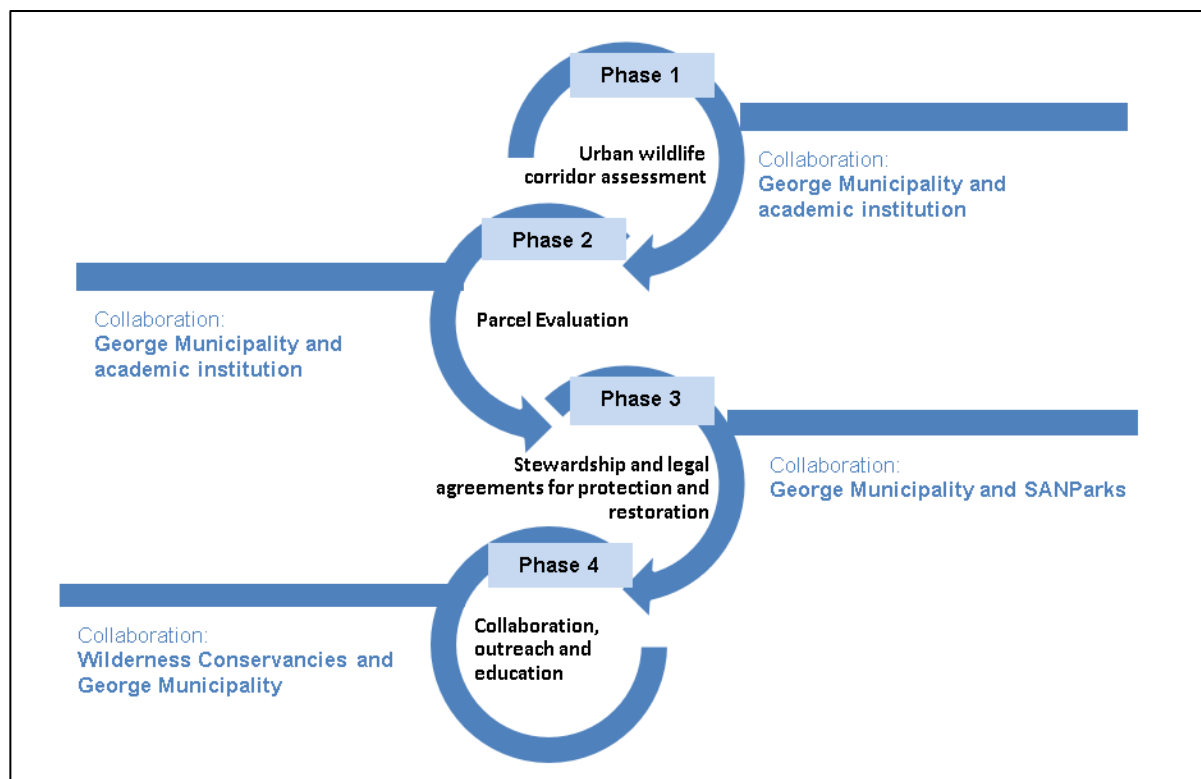

Residential development and small-scale farming within natural areas presents a critical challenge to the integrity of wildlife corridors. As urban areas expand, fencing becomes a ubiquitous feature aimed at demarcating property boundaries and securing developments. However, the unintended consequence of this practice is the fragmentation of wildlife habitats and migration routes.

Fencing is a barrier to the natural movement of fauna, impeding species' ability to forage, breed and migrate across landscapes. This fragmentation isolates populations, diminishes genetic diversity and increases the susceptibility of wildlife to ecological pressures and anthropogenic threats such as habitat loss, roadkill and predation by domestic animals.

To respond to this, the Touw River Conservancy convened a workshop in April 2022, bringing together landowners and relevant authorities, to map potential wildlife corridors in the Wilderness area. The primary objective of this gathering was to foster connections among residents residing around the 'Fence Scape' of Wilderness and to generate valuable information essential for the collaborative design of potential wildlife corridors. During the workshop, participants addressed the issue of fencing, considering factors such as height, length, material, and penetrability, which were identified as significant obstacles hindering the free movement of wildlife throughout the area. While the Fence Scape presented a notable challenge, it was recognized that additional factors impede the safe passage of wildlife. Consequently, the focus of the second workshop shifted toward identifying and mapping wildlife-friendly corridors, safe spaces and dedicated wildlife areas. Seven primary corridors were identified and mapped across the Greater Wilderness area. Table 1 lists the descriptions of each corridor.

George Municipality was presented with the Final Report for the Corridor Mapping Workshop 2, which occurred on 10 September 2022. The report included a map of established corridors, potential corridors and areas of concern. George Municipality was approached to determine what actions they can take to protect these wildlife corridors

The strategy for protecting wildlife corridors will be done in over four phases, shown in Figure X. A phased approach is beneficial for managing complexity as it divides the work into manageable segments, allowing for better scope management and risk mitigation. Developing a project plan with timelines for each phase is required for setting clear objectives, allocating resources effectively and tracking progress throughout the project lifecycle. By breaking down the project into distinct phases with defined timelines, George Municipality and stakeholders can maintain clarity, accountability and flexibility in achieving the project goals.

Local Nature Reserves

There are three declared Local Nature Reserves within the Municipal boundaries of George, Gazetted in terms of the Nature and Environmental Conservation Ordinance, 1974. These Lnr's lie within the zone of influence of the Witfontein Nature Reserve and play an important role to support buffering of the provincial nature reserve from urban impacts. The municipality is in the process of developing Protected Areas Management Plans for each of these conservation areas and have undertaken a process of verifying and validating the protected areas. Determination of the Vision, Purpose and Objectives for the areas, which inform the Key Performance Areas. The process includes the design of achievable deliverables and budget allocation to ensure the deliverables are achieved over the year cycle of the PAMP, once approved. These include:

The Kat River Nature Reserve

The Katrivier Nature Reserve is located on the north-eastern edge of the City of George and falls within the Kaaimans Quaternary System. The vision for the Kat Rivier Nature Reserve should provide the overall long-term goal for the reserve, which provides stakeholders an expectation of the future of the reserve. The Kat River forms the core of the nature reserve, and the vision is for a resilient landscape that provides socio-economic and cultural benefits to the community whilst providing improved water quality benefits to the Garden Route Dam.

The Kat River flows into the Garden Route Dam and the reserve extends as a buffer on either side of this ingress. The boundaries of the reserve follow the Kat River, a perennial tributary of the Swart River. It is a supplier watercourse of the Garden Route Dam, which is the main water source for George. The Garden Route Dam is the major source of drinking water in George. It is fed by the Swart and Kat Rivers and is managed by the Department of Water & Sanitation, George Municipality and the MTO Forestry. The nature reserve is zoned as Open Space Zone IV in terms of the George Municipality Integrated Zoning Scheme of 2017. This zoning allows for some consent uses, of which Utility Services is applicable to the Kat Rivier Nature Reserve.

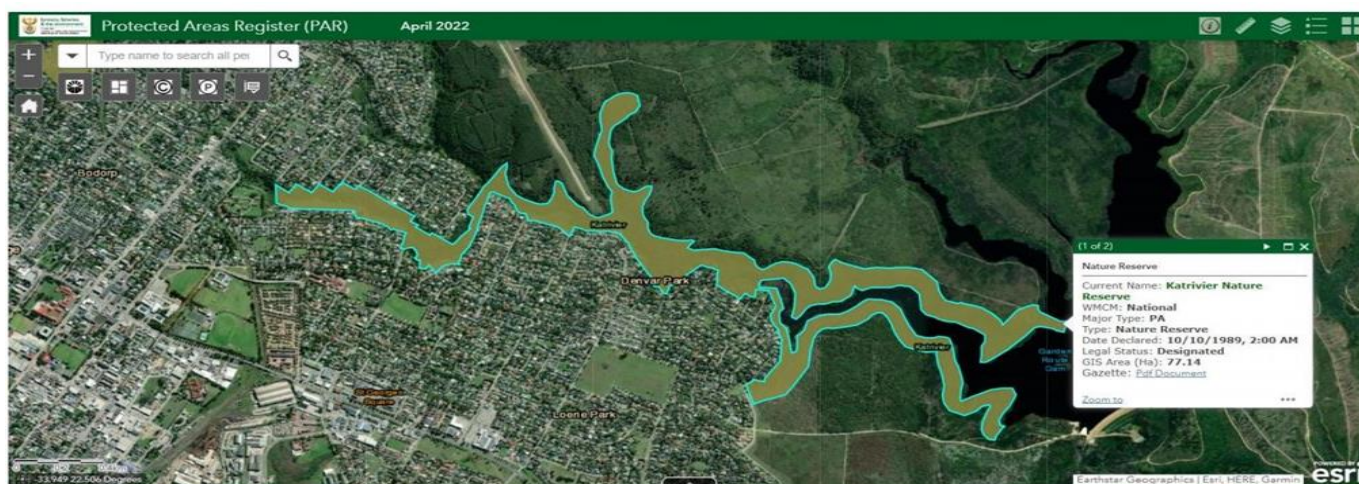

One of the primary reasons assumed for the declaration of the Kat River as a nature reserve is to ensure hydrological health and functioning of the river and in turn the Garden Route Dam. Thus, the river itself is deemed to be the core conservation area, extending into its riparian areas. Currently there are several impacts on the watercourse that have led to the degradation of the

system and severely impact on the water quality and functionality of the Kat River. Management of these will be a priority in order to comply with the NEM: PAA expectations of a protected area:

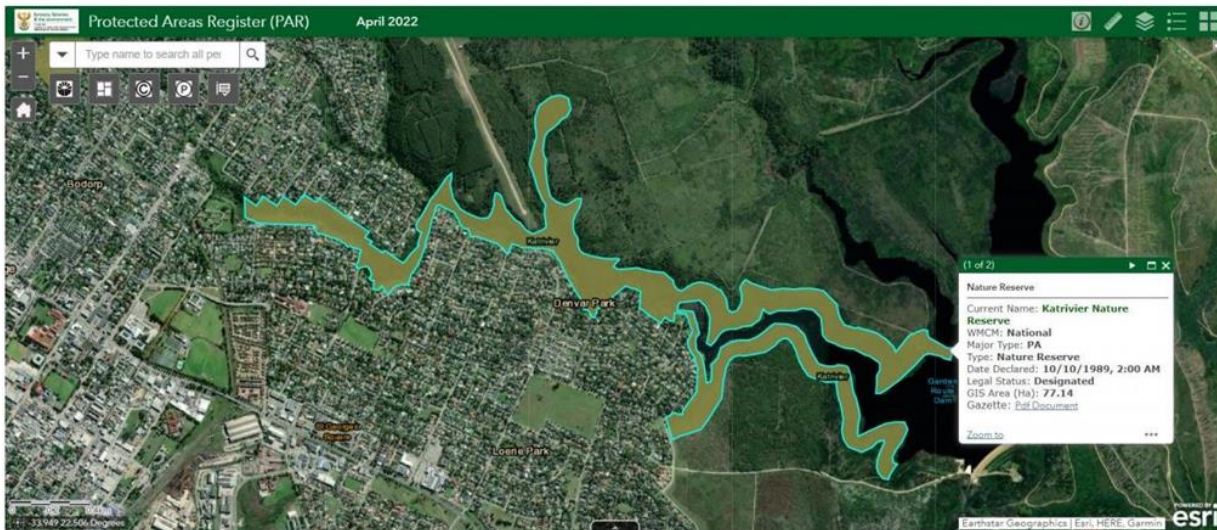

- The Kat River NR currently falls under the municipal Parks & Recreation department. There is no management structure or budget for the reserve, and essentially the only “management” that takes place is mowing open areas adjacent to roads. To implement this PAMP and to comply with NEM: PAA requirements, the management structure must be improved. This may include entering partnerships with NGO’s and organs of state.
- The Kat River Nature Reserve is indicated on spatial maps and in the municipal plans, however there is no demarcation of the protected area. This lack of awareness has probably led to much of the encroachment problems. For this reason, this aspect has been flagged as a critical management objective and immediate efforts should be undertaken to rectify this.
- The protected area forms an important role in that it is almost entirely within an urban area and is predominantly a riparian system. It is thus a sensitive and important biodiversity corridor. The riparian area is being significantly eroded due to encroachment of gardens and infrastructure to the edge of the watercourse. This also causes potential threats to the existing municipal service infrastructure located within the reserve. There are several management goals that are being investigated to support biodiversity conservation in the reserve.
- Flooding and fire disasters have occurred with increasing intervals in the Southern Cape. The Kat River is not immune to these events, however improved management of the protected area can have a beneficial impact on the biodiversity and the urban interface about disasters. The encroachment by landowners and the infestation of alien invasive vegetation left unchecked, will exacerbate the negative impacts and degrade the system’s ability to be resilient to these events. As a starting point, the Kat River needs to be remediated and rehabilitated and the strategies for achieving this is expressed in the PAMP.
- The Kat River is located within the fynbos biome of the Western Cape which provides for a wealth of botanical species that can be utilised. In conjunction with the Garden Route Botanical Gardens, the identification of species should be encouraged within the protected area.

Measures for improving the sustainability of the conservation areas will be submitted to the Municipal Council for adoption to commence implementation.

The Katrivier Nature Reserve, George

The Van Kervel Nature Reserve, (also known as George Botanical Gardens)

The Garden Route Botanical Gardens are situated at the foot of the Outeniqua Mountains and is less than 2 km's from the CBD of George. The site is approximately 12 hectares in extent and is leased by the Garden Route Botanical Garden Trust and maintained as the local Botanical Garden. The Trust also leases a portion of land from the Department of Forestry, Fisheries and Environment, where forest rehabilitation has been undertaken. The GRBG was proclaimed as a Local Nature Reserve in 1986 and came under the custodianship of the Trust in 2001. The GRBG is host to a wealth of faunal and floral species and historical features of the garden are maintained.

The GRBG offers basic facilities to guests and offers training programmes from its facilities, including a rescue centre for birds of prey. The accessibility of the facility supports awareness about the wealth of the flora as well as the threats to vegetation and biodiversity.

The Trust has not advanced in adopting a PAMP for the LNR and in this regard the municipality is investigating options to ensure feasible management and maintenance of the PAMP

Van Kervel Nature Reserve (George Botanical Garden)

The Fort Local Nature Reserve

Riverine and coastal Management

River Management

The George Municipality appointed a service provider to develop Riverine Management Plans(RMPs) for three of its urban rivers in the 2024/2025 Financial Year. The RMPs have two components:

- To maintain existing infrastructure along the watercourses through approved Maintenance Management Plans (MMPs). Approved MMPs will allow the Municipality to undertake infrastructure maintenance and repairs along the watercourses without having to undertake an environmental impact assessment. The approval for the MMPs is issued in terms of the National Environmental Management Act, 1998 (Act No.107 of 1998) ("NEMA") and Environmental Impact Assessment Regulations, 2014 as amended.
- To identify interventions that will improve the ecological functioning of the watercourses to secure and improve the benefits provided by the ecosystem services of the watercourses.

Coastal Management

The National Environmental Management: Integrated Coastal Management Act (ICMA) 24 of 2008 is the legislative framework for managing South Africa's coastal and estuarine areas and sets the norms, standards, and policies to promote conservation and maintain the country's coastal zone.

The Act aims to ensure that development and resource use in these areas are socially and economically fair, as well as ecologically sustainable. It defines the rights, duties, and responsibilities of government spheres regarding coastal areas, restricts harmful activities such as incineration and dumping at sea, controls coastal pollution, and addresses inappropriate coastal development. In addition, it fulfils South Africa's international coastal management obligations. The responsibility for implementing the ICMA is shared across the three government spheres.

Municipalities, like the George Municipality, have a specific role in managing the coastal zone at the local level. The following sections of the ICMA identify their duties:

- Section 48 – Coastal Access Land: Municipalities must ensure public access to coastal areas and maintain access

points as part of local development planning. This includes identifying, designating, and managing land to secure equitable public access.

- Section 49 – Establishment of Coastal Management Lines: Municipalities are responsible for establishing and enforcing coastal management lines to regulate development and other activities that could impact coastal areas.
- Section 51 – Management of Coastal Public Property: Municipalities must manage and protect designated coastal public property in their areas, ensuring sustainable use and preventing encroachment.
- Section 52 – Local Coastal Management Programs: Municipalities are required to develop and implement local coastal management programs that align with national and provincial policies. These programs must address local coastal issues and outline strategies to manage and protect the coastal environment.

The George Municipality developed an Erosion Response Guideline in 2024 to assist affected landowners to respond to coastal erosion appropriately and legally. The Municipality will appoint a service provider in the 2024/3035 Financial Year to develop a Dune Rehabilitation and Maintenance Management Plan for Wilderness.

The WCG: Department of Environmental Affairs and Development Plan published the Gwaing River Estuary Management Plan and Kaaimans River Estuary Management Plan in 2024. The Municipality has a shared responsibility to contribute to the outcomes of these plans. The provisions set out in these plans will be integrated into the next revision of the MSDF.

Climate change

Our collective responses to climate change, poverty and inequality are the defining challenges of our time. Addressing these issues collectively is essential, as climate change disproportionately impacts vulnerable populations, exacerbating poverty and deepening inequality. Effective responses must prioritize equitable and sustainable strategies to ensure that mitigation and adaptation efforts benefit all communities, particularly those most at risk.

The George Municipality is developing a Climate Action Plan grounded in the understanding that climate response and development must be integrated to enable effective mitigation and adaptation, while ensuring that economic growth occurs within the limits of ecosystem services. The Climate Action Plan will be implemented on the principles of people, nature and collaboration to advance green, resilient and inclusive development in the George Municipal area.

To achieve this, the Municipality will:

- i. embed climate-responsive strategies and assessments into municipal planning, decision making and operations;
- ii. promote climate action in community projects to increase resilience and awareness; and
- iii. secure access to domestic public funds and mobilise private and international climate financing to support high-return mitigation and adaptation efforts in the Municipality.

The Municipality has identified transformative climate actions in five key sectors: (i) human settlements and spatial planning; (ii) natural capital and biodiversity; (iii) infrastructure; (iv) disaster management; and (v) water and sanitation.

These sectors are prioritised because of their high climate vulnerability – as identified in the Garden Route District Municipality's Vulnerability Assessment – and/or their significant contribution to greenhouse gas emissions.

Changes in rainfall patterns could reduce the water yield from the catchments of the Outeniqua Mountains, impacting water availability for agriculture, domestic use, and ecosystems downstream. In addition, increased rainfall intensity and reduced

vegetation cover (due to drought or fire) could accelerate soil erosion, degrading the mountain ecosystems and the services they provide.

Climate change is anticipated to adversely impact the GRNP through sea level rise, increasing flooding and increased temperatures. The estuarine lakes may experience salinization and inundation, altering the species composition and reducing habitat availability for freshwater-dependent species. Intensified storm events could further damage estuarine ecosystems by impacting the sedimentation cycles, thereby reducing their ability to act as buffers against floods. Sedimentation from upstream erosion could also disrupt aquatic habitats. Rising water temperatures may affect fish and bird populations, particularly species reliant on specific thermal or ecological conditions.

Agriculture and urban expansion are the primary threats to the biodiversity of the CFR. However, climate change impacts further threatens ecosystems by increased temperatures and reduced rainfall. Fynbos species, which are already restricted to climatic conditions, may experience range contractions as temperatures rise. Lower elevations may become unsuitable for many species. In addition, altered fire regimes and climate conditions may favour invasive plants like Acacia and Eucalyptus, which outcompete native fynbos and reduce biodiversity. More frequent and intense wildfires, driven by prolonged dry periods, could harm forest ecosystems and fynbos biodiversity. While fynbos is fire-adapted, too frequent fires may disrupt regeneration cycles and allow invasive species to outcompete indigenous flora.

Coastal erosion along sandy beaches is a natural and dynamic process driven by complex interactions between physical, geological and environmental factors. While human activities can exacerbate erosion rates through activities such as coastal development, erosion remains an inherent feature of sandy coastal environments and must be managed with an understanding of its underlying natural processes. Coastal erosion is worsened by climate change-related stressors such as sea level rise, increased storm surges and increased coastal flooding. As these stressors intensify, erosion rates may accelerate, leading to more severe and widespread impacts on coastal environments.

4.3.18 Integrated Waste Management Plan

The George Local Municipality (GLM) is required to develop an Integrated Waste Management Plan (IWMP) as per the requirements of the National Environmental Management Waste Act (59 of 2008) as amended (hereafter referred to as the Waste Act). The IWMP must be endorsed by the Department of Environmental Affairs and Development Planning (DEA&DP) after approval by the George Municipal Council and thereafter incorporated into the municipal IDP.

In terms of the Municipal Systems Act, a municipality must give effect to the provisions of the 152(1) and 153 of the Constitution and must:

- Give priority to the basic needs of the local community.
- Promote the development of the local community.
- Ensure that all members of the local community have access to at least the minimum level of available resources and the improvement of standards of quality over time.

4.3.18.1 Municipal Integrated Waste Management Plan History

This is the third generation IWMP for the GLM and this plan will cover the period 2020 -2025. The first generation IWMP for GLM was developed in 2006 and was then subsequently revised in 2014. An IWMP is typically revised every 5 years to parallel the municipal IDP planning process, and to take into cognisance changes in the status quo of waste management and changes in legislation and guidelines related to waste management.

The development of the IWMP is currently out of sync with the GLM IDP cycles. The current GLM IDP (4th generation) covers the period 2017 -2022. The IDP is however reviewed on an annual basis, all the projects listed in the implementation plan of this IWMP should be included in the next annual review of the IDP to ensure budget is allocated for the implementation of the projects.

The Integrated waste management bylaw has been aligned to the NEM: Waste Act and will be tabled in the 2024 financial year. Furthering their quarterly internal audits are conducted at all waste facilities. External audits are also conducted, and the reports are submitted to the Provincial waste management officer, DEA and DP.

A Waste Minimisation Plan was approved by council during the 2021 financial year this includes initiatives such as the first home composting bins which is set to start during the 2023/2024 financial year which is specifically targeted at organic waste diversion. Notwithstanding the municipality also focusses on diverting construction and demolition waste from the landfill. Therefore, currently construction and demolishing waste is diverted to the construction for the compost facility and some of the construction and demolishing waste is used as cover material at the landfill. The Municipality is investigating future establishment of a crushing site at the Gwaing Waste Disposal Facility.

The Municipality has transfer stations and is constructing a composting facility for the diversion of organic waste. A three-bag system is used to separate recyclables and green waste from general waste (used for clean-ups). The Municipality also has a blue bag system for the separation at source (S@S) program that was rolled out in low-, middle- and high-income areas. The participation rates in some high-income areas can reach 60 per cent whereas in the middle-income areas the participation rate ranges between 10 - 20 per cent. The Municipality is currently busy with the construction of a composting facility. The municipality also has a dedicated waste management officer.

Furthering thereto the municipality collects waste in the formal, informal and rural areas once a week. The municipality

registers all waste facilities on the GRWMIS and reports monthly on the IPWIS.

4.3.18.2 Integrated Waste Management Plan Objectives

The aim of an IWMP is to determine the status quo of waste management and identify measures to improve waste management in the municipality. The objective of this IWMP is to present a vision of waste management in the GLM over the next 5 years. The majority of the project identified in this IWMP will be conducted over a five-year timeframe, however some longer-term projects have also been identified. The National Waste Management Strategy of 2011 (NWMS) identifies the primary objective of integrated waste management planning as being to: “integrate and optimize waste management so that the efficiency of the waste management system is maximised, and the impacts and financial costs associated with waste management are minimised, thereby improving the quality of life of all South Africans. “The NWMS also presents the waste management hierarchy which outlines the preferred methods for management of waste.

4.3.18.3 Integrated Waste Management Plan Goals

A total of seven goals were identified for the George Local Municipality.

1. Effective waste information management and reporting
2. Improved waste education and awareness
3. Improved institutional functioning and capacity
4. Provision of efficient and financially viable waste management services
5. Increased waste minimisation and recycling
6. Improved compliance and enforcement
7. Improved future planning

4.3.19 Community Safety and Security

If recent times have taught us anything, it is that disasters come in so many more forms than we could have previously imagined and with everchanging new complexities. The George Municipality and its surrounding municipalities have been affected by more extraordinary natural, situational and environmental extremes in the past 15 years than what most authorities might experience in a century.

From fires and devastating floods to bird flu scares, large scale protest action and the longest drought in history - we have had to deal with this proactively and innovatively. We have anticipated the types of disasters that are likely to occur in our area where possible and have facilitated maximum emergency preparedness and disaster response. More recently the Covid-19 pandemic, has stretched resources to the maximum, not only for George but for the entire country.

Each time, representatives from the district – authorities, agencies, organisations, property owners, businesses, volunteers and partners – have come together to coordinate, mitigate, manage and serve. Each time we have learnt valuable lessons and have felt extraordinarily blessed for having come through it, perhaps not entirely unscathed, but definitely better off for gaining the experience and for being at the heart of the camaraderie that exists in our communities who stand together in times of hardship.

While we wish it were different, George Municipality's unique geographical location combined with a range of circumstantial factors leaves us vulnerable to disasters over which we have little control. The objective of a comprehensive, risk-based Disaster Management Plan is to take an integrated approach and to be prepared for any possible hazard.

The Disaster Management Act, 2002 (Act No. 57 of 2002) requires all municipalities to prepare a Disaster Management Plan for their area and to regularly review and update this plan. This plan is not just a compliance document – it is a declaration of intent to do our very best with the resources available to us. It is the culmination of thousands of hours of experience, hundreds of discussions and brainstorm sessions as situations unfolded, and extensive research from countless resources.

The strength of this plan lies in sound long-term relationships which we have with our emergency services, property owners, volunteer organisations, businesses and residents. We acknowledge the character of our people, as without it, our best plans will fail.

The cornerstone of municipal safety and security is extensive stakeholder consultation and involvement. Each and every stakeholder has a critical role to play in municipal safety in South Africa.

The following participants have been recognised as crucial stakeholders and success partners in order to accomplish this:

- South African Police Services;
- Department of Community Safety (DOCS);
- Garden Route District Municipality;
- Neighborhood watches and Farm Watches;
- Community Policing Forums (CPFs);
- Private and corporate businesses;
- Private security companies;

- Department of Correctional Services;
- Department of Justice;
- Law Enforcement;
- Traffic Services;
- Fire and Rescue; and
- Disaster Management.

Communities are being mobilised and supported to establish neighbourhood watches and formalise their respective neighbourhood watches which will be issued with equipment from DOCS and the municipality to aid in their fight against crime and to be the eyes and ears on the ground. Training will also be provided by the municipality to enhance the training that neighbourhood watches receive from DOCS. Radios will be provided to enable communication with the municipality's Protection Services control room.

The municipality's control room and joint operations centre (JOC) is envisaged to house role-players from neighbourhood watches, security companies, SAPS, Municipal Law Enforcement Officers from Protection Services.

Initiatives have and will continue to be launched as it contributes and make communities aware in terms of crime prevention tips and other preventative tips for example fire safety, what to do in case of disasters etc. This will be a joint approach between role-players and supplemented based on crime patterns and situations experienced. Training will also be provided to enhance safety initiatives for example road safety (crossing of roads) etc.

The Community Safety Forum (CSF). The CSF is a multi-stakeholder forum that will address matters of community safety and security. The purpose of CSF is to promote the development of communities in a safe environment and have access to high-quality services at local government level, through multi-agency collaboration between the different spheres of government and communities. The CSF as a multi-sectoral structure would champion the coordination, integration, and implementation of crime and violence prevention community safety initiatives. The CSF will have three Clusters, namely: Law Enforcement, Social Cohesion and Crime Prevention through Environmental design.

Security planning is a critical function for all Municipalities. A security task team has been established to identify what type of risk could impact the Municipal assets, dictating which assets needs protection and what counter measures would be most effective.

Serious threats against staff and Councillors are prioritized on a Senior level and all measures to be implemented are taken. The SAPS are involved with such threats.

The Acts which are used as reference are:

- Control of access to premises and vehicles act 53 of 1985,
- Minimum Information Security Standards (MISS) – Approved by Cabinet 4 December 1996,
- Minimum Physical security standards (MPSS) 2009
- PSIRA regulation act, 56 of 2001,

- Protection of information Act 84 of 1982,
- Criminal Procedure Act 56 of 1977,
- Identified Municipal Sites are covered Private Security Service Providers on a 3-year Tender basis

4.3.19.1 CCTV Cameras

The impact of loadshedding is causing the CCTV cameras to be offline, this is a serious concern, as these cameras are being used for service delivery and criminal activity in and around George, to upgrade these camera poles has a financial impact, and will cost the Municipality R26 300,00 per pole.

The CCTV Control Centre Building are also affected by loadshedding, as we are looking into installing Lithium Batteries with the existing inverter, we need far more, which also has a financial impact on the Municipality.

Vandalism and criminal activity to our camera poles are a concern, as these acts are mostly done during the hours which the Control Centre are not operational, we are currently looking into a 24h shift system, which will have a financial impact.

Ideally the CCTV Control Centre are in need of a Rapid Response Unit that can respond to complaints and vandalism acts for the Municipality which can help with reducing the constant acts of vandalism on Municipal infrastructure as electric cable theft etc.

Additional staff to join the existing team, could benefit the organisation by combating criminal activities within the Municipal Boundaries.

4.3.19.2 Fire Services

The Municipal Fire and Rescue section is dedicated towards the provision of services that seek to safeguard the public against fire and other natural and man-made disasters and emergencies.

The role of the Fire and Rescue Services is to deal pro -actively and reactively with the following:

- Protection and rescue of life and property from any threatening danger;
- Prevent the outbreak or spread of fire;
- Extinguish fire;
- Any other duties as stipulated in the Fire Brigade Services Act;
- Assist SAPS with inspections at licensed premises to combat illegal activities identified by crime intelligence;
- Activate the Disaster Management Unit in case of any life-threatening incident, for example, flooding, loss of residence due to fire, etc;
- Conduct annual evacuation drills at designated buildings and premises.
- Integrated development planning towards uniform fire services;
- Development of specialised fire services capacity to deal with specialized fire risks prevalent in the area such as veldfires, chemical, informal settlements fires, etc;
- Development of specialised rescue services capacity focusing on the rescue disciplines prevalent in the area of jurisdiction as a priority;

- Coordination of the standardization of infrastructure, vehicles, equipment and operational procedures;
- Facilitation and coordination of the training and development of practitioners;
- Development and facilitation of the implementation of standardized municipal by-laws;
- Coordinate planning for the provision of fire safety and prevention;
- Development, implementation and maintenance of mutual aid agreements amongst the local fire services, designated fire authorities, Fire Protection Associations and volunteer fire associations;
- Development, support and implementation of community-based fire safety and prevention programs; preventing the outbreak and or spread of a fire, by making arrangements amongst others for: -
 - (i) the provision of information, publicity, training, education and encouragement in respect of the steps to be taken to prevent fires and death or injury by fire;
 - (ii) the giving of advice, on request, about –
 - how to prevent fires and restrict their spread in buildings and other property;
 - the means of escape from buildings and other property in case of fire;
 - (iii) conducting regular and random fire safety inspections at any premises where the Chief Fire Officer or his or her designate deems necessary;
 - (iv) providing advice on the means of escape from buildings and other property in case of fire; fighting and extinguishing a fire; by making arrangements amongst others for: -
 - (i) having sufficient staff, equipment and vehicles at its disposal to deal with the fire risks in its area of jurisdiction – a risk-based approach;
 - (ii) the development and implementation of standard operating procedures for use during firefighting operations; and
 - (iii) call taking and dispatching facilities training for dealing with incoming calls to report fires and summoning personnel amongst others; control and stabilisation of dangerous goods incidents; protection of life and or property against fire or other related danger; rescue of life and or property from fire or another form of entrapment; rendering of an emergency medical care.
- performance of fire safety activities; including scrutinising of building plans during approval procedures.
- participation in special events planning;
- maintenance of fire service equipment, infrastructure and or materials;
- Conducting fire risk assessments;
- Provision of training and to fire services practitioners;
- Procurement of equipment, materials and other supplies required to
- perform the functions optimally;

- Provision of support in the implementation of Disaster Management Act,
- 2002 (Act No. 57 of 2002), and Performance of any other function connected with any of the matters
- contemplated in paragraphs (m) to (v)

4.3.19.3 Traffic Services

The traffic services operational response plan seeks to address all the factors (human, vehicle, and roads / environment) that contribute to accidents (crashes) on the roads within the area. This approach is based on reliable research data which have been accumulated locally, nationally, and internationally. In analysing the data, the Section: Traffic Services can ascertain the frequency of accidents, where and when (time of day) it occurs and the severity (type) of accidents. Through this approach the Section: Traffic Services can deploy resources more efficiently and effectively to mitigate the risk of fatalities on the roads within the boundaries.

Traffic Services has aligned itself to the national strategy of the Department of Transport to improve road safety and mitigate fatalities on South African roads. The municipality has identified ten goals which are being prioritised as municipal priorities:

- To achieve a measurable improvement in road user behaviour – including skill, safer decisions, and better regard for other road users.
- To reduce the incidence of traffic offences, including speeding, drunk-driving, and drug-driving, dangerous overtaking, reckless & negligent driving, etc.
- To ensure that unfit road users are identified and appropriately sanctioned.
- To ensure that un-roadworthy (including overloaded) vehicles are appropriately sanctioned.
- To improve the safety level of public transport vehicles and drivers.
- To reduce the incidence of dangerous driving.
- To reduce the risk-taking behaviour of pedestrians and jaywalking.
- To develop education programmes for vehicle road users to enhance their road safety knowledge, eg. Road safety for creches, primary and high schools including farm workers and businesses)
- Identify and address key vehicle road user crash sites on a rolling basis.
- Ensure that all road safety interventions are intelligence led.

4.3.19.4 Drive- Through: Blanco House

George Municipality's vehicle population is currently standing on 79600 (licensed). Due to the fast growth in registration of motor vehicles in WC044, the Department explored innovative measures to reduce long queues by engaging with the Department of Transport. The Natis system was updated to make provision for the improvement of service delivery whereby owners may register on the online Natis Portal and receive notices via email and SMS's. This reference number created by the system could now be used to conclude a transaction for renewal of Licenses (paperless transactions).

Blanco Drive-Through renewals was established on the 7th of November 2022. The transactions done by the facility increased from an average of 350 transactions per month to 2500 for license renewals and 1200 for vehicle registrations.

4.3.19.5 Law Enforcement

With the review of the Safety Strategy, the municipality has to adapt to the changing environment of crime in its area and

actively pursued closer working relationships with SAPS, private security, neighbourhood watches active in the area to be able to make an impact. It is common knowledge that criminals become smarter and migrate from neighbourhood municipalities which means that the municipality has to think smarter to always be one step ahead.

The municipality has completed all 3 phases of the action plan as identified during the previous review. This includes the installation of License Plate Recognition cameras (LPR) at all the main entrances and exits. These LPR cameras are supplemented with additional LPR cameras within residential areas which make it possible to track the direction of suspect vehicles linked to crime picked up by these. The municipality continuously invests in CCTV to enhance safety. The municipality also has a CCTV Master Plan which is a “living” document and frequently updated based on needs identified concerning safety.

The focus of Law Enforcement:

- Effective monitoring and surveillance of CCTV cameras;
- Zero tolerance approach towards petty crime - visible policing focussing on all areas, within the George Municipal boundaries inclusive of Uniondale and Haarlem.
- Continuous operational planning with SAPS and safety partners;
- Amendment of the structure of Law Enforcement to accommodate identified needs;
- Provisions for the establishment of a Rapid Response Unit (RRU);
- Strengthening coordination of communication Strategies between neighbouring municipalities;
- Social Crime Prevention Strategies in conjunction with the Section: Community Development in terms of Council's
- Street People Policy and Social Justice SOP;
- Consult with the GRDM in terms of sharing of resources and information flow;
- Use of innovative technology to improve enforcement strategies;
- Compiling a security and safety camera master plan;
- Completion of the municipal control room – Joint Operating Centre (JOC);
- Provide training to Neighbourhood watches; and
- Implementation of the community safety forum

4.3.20 Disaster Management

The National Disaster Management Centre (NDMC) provided a set of guidelines; developed in terms of section 19(a) of the Disaster Management Act, 2002 (Act No. 57 of 2002) (DMA) and section 3.6 of the National Disaster Management Framework, 2005 (NDMF) provides a uniform structure and checklist to organs of state to develop a Disaster Management Plan.

This plan confirms the arrangements for managing disaster risks and for preparing for – and responding to disasters within the Municipality as required by the Disaster Management Act.

4.3.20.1 The purpose of the George Municipality Disaster Management

The National Disaster Management Centre (NDMC) provided a set of guidelines; developed in terms of Section 19(a) of the DMA and section 3.6 of the National Disaster Management Framework, 2005 (NDMF) provides a uniform structure and checklist to organs of state to prepare a level 3 Disaster Management Plan.

This plan confirms the arrangements for managing disaster risks and for preparing for- and responding to disasters within the

George Local Municipality as required by the Disaster Management Act.

This plan seeks to achieve the following key outcomes:

- Integrated institutional capacity for disaster management such as roles and responsibilities of municipal departments and other key stakeholders; disaster management advisory forums; and disaster risk management planning.
- Disaster risk assessments which include disaster risk assessment and disaster risk reduction planning; monitoring updating; and disseminating risk information.
- Disaster risk reduction and that includes disaster risk management planning; setting priorities for disaster risk management planning; and inclusion of disaster risk reduction efforts in other structures and processes.
- Response and recovery such as early warnings; assessment, classification, declaration and review of disaster; integrated response and recovery; and rehabilitation and reconstruction.

The aim of the George Municipality Disaster Management Plan is to outline the actions for the efficient deployment, and co-ordination of the Municipal services, role players and personnel to provide the earliest possible response to:

- Protect and preserve life and property;
- Minimize the effects of the emergency or disaster;
- Restore essential services.

4.3.20.2 Risk assessment throughout George

The top risks for George have been classified in the Risk Assessment conducted by the WC PDMC as:

- Drought
- Fire (Wildfires)
- Alien invasive species
- Road incidents
- Severe storms
- Flood
- Civil unrest

4.3.20.3 Risk reduction strategies

The Disaster Management section will be focusing on risk reduction strategies in 2023. Risk reduction programs, training, awareness campaigns and research will be taking priority in 2023/2024.

4.3.20.4 Disaster Risk Reduction (DRR)

Disasters can be reduced by decreasing the exposure to hazards, lessening vulnerability of people and property, the sensible management of land and the environment, and by improving preparedness and early warning for adverse events. Disaster risk reduction includes disciplines like disaster management, hazard mitigation and emergency preparedness, but DRR is also considered an integral part of sustainable development. DRR sets out to bridge the gap between development and livelihood security, as development can only be sustained if there is a clear understanding of and response to the negative impact of disasters. DRR interventions seek to assist in the development of this understanding, to support livelihoods and to protect assets. As an increasing number of people are being affected by natural hazards, there has been a growing recognition by governments and organisations that building resilience and reducing disaster risk should be central to their everyday activities.

No community can ever be completely safe from hazards and threats, and different layers of resilience are needed to deal with different kinds and severities of risk, shock, stress or environmental change. It may be helpful to think of a disaster resilient or disaster-resistant community as the safest possible community that can be created in a natural hazard context, minimising its vulnerability by maximising the application of DRR measures. Resilient communities commonly share a number of characteristics.

- Knowledge and well-being: the community has the ability to assess, manage and monitor its risks and learn new skills as well as build on past experiences
- Governance and organisation: the community has the capacity to identify problems, establish priorities and act accordingly.
- Connection with external stakeholders: the community has an established relationship with external actors who provide a wider supportive environment, and supply goods and services when needed.
- Operation and maintenance of infrastructure and services: the community has strong housing, transport, electrify, water and sanitation systems. It has the ability to maintain, repair and renovate them.
- Economic well-being: the community has a diverse range of employment opportunities, income and financial services. It is flexible, resourceful and has the capacity to accept uncertainty and respond (proactively) to change by ensuring business continuity
- Sustainability: the community recognises the value of natural assets and has the ability to protect, enhance and maintain them.

4.3.20.5 Financial Constraints

Disaster Management within George LM remained an unfunded mandate. The Disaster Management functionary was strategic placed in the Community Services Directorate, more closely associated with the Fire and Disaster Management sub-directorate.

Like many Municipalities, there is generally within the George Local Municipality insufficient manpower (operational budget constraints) to mobilise additional personnel resources. A disaster situation becomes even more of a challenge to manage when existing staff are already over-utilised. The Disaster Management Committee consists of the following stakeholders within the Municipality:

- Municipal Manager;
- Disaster Manager;
- Portfolio Councillor(s);
- Director Community Services;
- Director Civil Engineering Services;
- Director Electro Technical Services;
- Director Corporate Services;
- Director Financial Services; and
- Director Human Settlements, Planning and Development;

4.3.20.6 DRR Plans for Risk Reduction

The following tables shows disaster risk reduction plans and recommendations.

The Western Cape economy is slowing in line with the national economy and is extremely vulnerable to any further international and domestic shocks. This low growth coupled with high levels of unemployment, poverty and inequality, will likely result in an increased demand for public services, placing greater pressure on already constrained resources. The current global and domestic economic pressures highlight the fundamental need for careful planning and tough decision making, active economic transformation and appropriate policy responses which creates both economic and human development.

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
Animal Disease			
Societal	<p>Awareness and management strategy on stray animals:</p> <p>It is a legal requirement in South Africa to have your pets vaccinated against rabies. However, vaccination with regards to stray dogs is uneven and is one of the contributing factors towards rabies risk within the area. Rabies is spread to other animals and people mainly by stray dogs (coming in contact with other wild animals such as the bat-eared fox and mongoose), yellow mongooses and especially the bat-eared foxes. In many instances' dogs may have rabies without their owners even realizing until it dies, and an autopsy reveals the cause of death. It is recommended that an ongoing structured and integrated campaign is implemented targeting general public especially in the poorer and informal areas to improve education and awareness regarding the spread of diseases, the risk of climate change and pre-notification of the movement of animals. A strategy to monitor, control/regulate the movement of stray animal must be integrated into the strategy to prevent the transmission to domestic animals/livestock.</p> <p>Between various stakeholders, solutions could be developed. During the Thusong mobile clinic awareness-raising days the pet-owners need to be educated not to neglect their animals after vaccination has been completed. Alternative homes could also be found for stray animal (after infected have been vaccinated).</p> <p>Rabies is not a serious problem in the Municipality, but such awareness campaign is necessary none the less as a preventative strategy.</p>	DoA Veterinary Services George Municipality Thusong Centres	<p>Improve early warning systems</p> <p>Decrease the spread of animal diseases</p> <p>Decrease stray animal count</p> <p>Improved awareness during Thusong mobile visits</p>
Management	<p>Develop an Animal Disease Disaster Preparedness Plan:</p> <ul style="list-style-type: none"> Currently animal diseases are not a big problem within the Municipality and incidence are localized and dealt with effective and efficiently by the State Veterinarian Department, however, historical occurrence of disease is not a good indicator of risk. It is argued that the diseases which carry the highest risk of causing an epidemic and disaster would be those that are new to the area e.g. brought in from another province or country. 	DoA Veterinary Services George Municipality	<p>Identify and characterize the various animal disease risks and risk hotspots and circulate information between all relevant stakeholders to minimize disconnection between</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	<ul style="list-style-type: none"> Describe livestock value chains and identify people and organizations, particularly the communication between DoA, Garden Route District and the George Municipality, involved in those chains. Continued financial assistance to animal welfare. Determine how capacities can be improved for more effective and efficient response to animal diseases. Determine how laboratory diagnostic capabilities need to be strengthened. 		Local Municipality and Veterinary Services
	<p>Develop a Small-scale Farming Monitoring System</p> <p>In collaboration with Province, it is recommended that the municipality develop a strategy aimed at monitoring and regulating small-scale farming within the area. All small-scale farms should be inspected, and hygiene standards monitored.</p>	DoA Veterinary Services George Municipality Ward Councillors	Identify high-risk small-scale farming hotspots and implement monitoring and evaluation process. Inspection should occur at least on biannual basis
Human Diseases			
Physical Planning	<p>Identify high risk areas subject to the outbreak of epidemics.</p> <p>As it was said in the Hazard Analysis section on Human Diseases, the spread of disease is closely linked to socio-economic and environmental vulnerabilities (which includes but not limited to poor living conditions, unhygienic standard etc). This above especially applies to areas such as Wilderness Heights, Touwsrante & Kleinkrantz, Thembaletu, Protea Park, Blanco, Rosemoore and Parkdene which should be closely monitored on a regular basis.</p>	Health Services (DoH) George Municipality Social Development SASSA	High risk areas have been identified. Social grant usage occurs responsibly
Management	<p>Develop a strategy aimed at combating women abuse within the municipality. Part of this strategy should include building a safehouse to shelter abused women. A member from Leeu-Gamka said that women abuse is on the rise especially amongst the poorer areas. Further investigation should be given to this matter.</p>	DoH DoE Social Services George Municipality SAPS CDWs Ward Councillors Relevant NGOs/NPOs	Increase police presence in high-risk areas. Create a safe space for abused women to report incidents In collaboration with Province, build a safehouse for abused women
	<p>A structured and comprehensive multi-disciplinary and multi-sectoral strategy and plan must be developed and implemented to address the problem of substance abuse in the area. The problem would require buy in on a provincial level. With a community condemned to poverty, social ills such as substance abuse, family and gender violence, criminal activity and grand dependency fosters a hand-out dependency culture which is detrimental to the sustainability of the town. In addition to law enforcement, the provision of treatment and prevention services is also critical.</p>	Social Development Services Health Services (DoH) Dept. of Education SAPS Law Enforcement Relevant NGOs/NPOs Ward Councillors	Initiate an annual drug and abuse programme/roadshow Clamp down on illegal shebeens/taverns Erect CCTV cameras in drug and crime hotspots Increase police presence in high-risk areas
	<p>Continue intensive health interventions</p> <p>Particularly for HIV/AIDS and XDR-TB (Drug-resistant TB).</p> <p>Support the development of vulnerable groups by compiling a strategy and plan aimed at emergency housing, water, sanitation and food for a large-scale influx of displaced people.</p>	DoH Relevant NGOs/NPOs Thusong Centres	Health promotion to quit smoking is implemented Develop an emergency plan for influx of displaced people
	<p>Increase infectious disease capacity and infrastructure In George Local Municipality</p> <p>Many clinics in the rural/outlying areas are understaffed or in need of an upgrade. HIV/Aids and TB is closely linked. TB can be fatal if not treated. The HIV epidemic has led to an enormous increase in the number of TB cases as people living with HIV are far more susceptible to TB infection and are less able to fight it off. TB is responsible for a third of all deaths in HIV-infected people. The HIV epidemic has led to an enormous increase in the number of TB cases. People with HIV are far more susceptible to TB infection and are less able to</p>	DoH George Municipality	

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>fight it off. Ensure that all practitioners working with people with TB adhere to the International Standards for TB Care. These efforts should emphasize providing proper diagnosis and treatment to all TB patients, including those with drug-resistant TB. Establish a protocol for regular and timeous supplies of all anti-TB drugs. Proper management of TB drugs and providing support to patients to maximize adherence to prescribed regimens; caring for MDR/XDR-TB cases, and minimizing contact with other patients, particularly those with HIV, especially in the early stages before treatment has had a chance to reduce the infectiousness. Focus on high-density and informal settlement areas as well as a poorer rural region of George Municipality.</p>		
<p>Develop a strategy aimed at offering cost-effective transportation services for poor communities (outlying and rural areas) to hospital in George Municipality and hospitals in neighbouring municipalities</p> <p>Extend Go-George Services to rural and outlying areas</p> <p>Access to emergency medical services is critical for rural citizens due to rural distances between towns and health facilities being much greater than in the urban areas. Areas such as surrounding informal areas and rural peripheries can benefit from easier access to central node of George Municipality. It is recommended to consider a strategy that either improves public transport or a system that offers subsidised transport for outlying rural areas.</p>	<p>George Municipality Taxi Association Health Services (DoH)</p>	<p>Develop a subsidized transport scheme for outlying areas</p> <p>George Municipality and Taxi Associations develop MoU</p> <p>Extend Go George to poorer and rural areas (where possible)</p>
<p>Develop a strategy and plan aimed at inspection, upgrading, improving services, monitoring and evaluation of community clinics in surrounding outlying/rural areas</p> <p>Physical status of some community clinics should be inspected and also be evaluated on an annual basis.</p> <p>Part of this strategy could include erecting mobile clinics in areas such lacking</p>	<p>DoH George Municipality MIG CDWs Ward Councillors</p>	<p>Community clinics in poor states have been addressed</p>
<p>Increase youth access to contraceptive and reproductive health care services</p> <p>Teenage pregnancy is considered an issue with the Municipality</p> <p>Facilitate programmes to make pregnant women more aware of the advantages of a healthy lifestyle during pregnancy.</p> <p>Ensure clinical partners provides teen friendly, culturally competent reproductive health care services that are easily accessible to all young people in the community.</p> <p>Educate community leaders, parents, and other relevant community members about evidence-based strategies to reduce teen pregnancy and improve adolescent reproductive life choices.</p> <p>It is believed that teenage pregnancy and drug/alcohol abuse is closely interlinked.</p>	<p>DoH George Municipality CDW Selected NGOs/NPOs Ward Councillors</p>	<p>A decline in teenage pregnancies</p>
Wildland Fires/Pest Infestation		
<p>Defensible Zones</p> <p>Planning against wildfires in the future needs to be a fine balance between defending farms, plantations and homesteads and urban centres and maintaining the vigour of the Fynbos. It is imperative that a 30-year spatial plan is compiled to defend against fires. Both the 2017 and 2018 fires demonstrated that the Afro-montane forest, except under extreme fire conditions, acts as a natural fire break.</p> <p>Corridors of Afro-Montane forest need to be maintained, and in areas between plantations, need to be propagated to mitigate fires spreading between blocks of pine plantations.</p> <p>Buffer zones between Fynbos and urban centres need to have regular managed burns with a high frequency program. These buffer zones should be at least 500m wide.</p> <p>Rural and agricultural properties need to maintain defendable zones (space) of a minimum of 250m to protect structures, assets, infrastructure and valuable crops and livestock.</p> <p>Controlled Fynbos burns in rotation blocks need to be implemented to reduce the future occurrence of extensive wildfires. If integrated in a coordinated</p>		

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	manner future wildfire can be limited to the Fynbos without risking the wellbeing of agricultural, plantations and urban centres, all the while maintaining the combined health of the Fynbos and the safety of Garden Route residents.		
Physical	<p>Source funding to address the capacity constraints with Municipality</p> <p>Municipalities need to be equipped to ensure effective and efficient response to wildfires. In often where you find municipalities that lack manpower and an adequate fleet. In an area where wildfires are a frequent reality it is of vital importance that the lack of firefighting capacity within the municipality be addressed. This issue needs to be escalated to a Provincial tier and solutions be determined to address this shortcoming. There are various funding sources available that can possibly be explored.</p>	<p>Western Cape Disaster Management Centre</p> <p>Garden Route District Municipality</p> <p>George Municipality</p>	
Management	<p>Develop and implement an alien invasive clearance and management strategy</p> <p>Invasive species will also become an ever-increasing hazard to manage and monitor due to its linkage to indigenous domination, increase in fire risks, impacts on water resources etc. Alien infestation by species such as Rooikrans (<i>Acacia cyclops</i>), Port Jackson (<i>Acacia saligna</i>), Black Wattle (<i>Acacia mearnsii</i>), Blackwood (<i>A. melanoxylon</i>), Pine (<i>Pinus pinaster</i>), Silky Hakea (<i>Hakea sericea</i>) and <i>Eucalyptus</i> spp. is rife throughout the area. Pines and Hakea have invaded the slopes of the Outeniqua Mountains and South African Breweries (SAB) have attempted to contain this invasion. A noticeable feature of the Outeniqua Mountains is the stubble of dead pines along the crests of the ridges, these killed by the frequent wildfires in the area. Alien vegetation dominates most of the riparian vegetation flanking rivers and streams in the area, mostly Black Wattle and to a lesser extent Blackwood, pines and eucalypts. Fynbos areas are invaded by Hakea, Blackwood, Pines and to a lesser extent Rooikrans. The latter dominates the vegetation along the coastal plain, especially along the sea front dunes, with Port Jackson common in some areas</p> <p>Landowners are legally responsible for controlling invasive alien species on their land and there are several different pieces of legislation governing the control and management of alien invasive species:</p> <p>As a minimum, environmental assessment practitioners and land developers should be aware that:</p> <ul style="list-style-type: none"> - Species that are listed invaders under the Biodiversity Act must be controlled according to the invasive species regulations and this is the responsibility of the landowner (see Government Notice: No. 37885 National Environmental Management: Biodiversity Act 2004, Alien and Invasive Species Regulations, 2014). - Invasive alien species that are commercially important require a permit to be grown or retained on a property and any spread of the species beyond the boundaries of the property must be controlled by the permit-holder. <p>Sellers of properties must notify the Department of Environmental Affairs and potential purchasers in writing of the presence of listed invasive species on that property.</p>	<p>George Municipality:</p> <p>Disaster Management Services</p> <p>Fire Rescue and Emergency Services</p> <p>Environmental Services</p> <p>Developmental Services</p> <p>CapeNature</p> <p>SANSPARK</p> <p>Landowner's Association</p> <p>DEA&DP</p>	<p>Development of Intergrated Multi-Stakeholder Alien Invasive Clearance and Management Plan as a matter of a priority</p> <p>Update plan regularly as new species are identified</p> <p>Develop integrated management system to govern compliance to land management</p> <p>Initiate a monitoring and evaluation process cycle</p> <p>Invasive alien species create opportunities for job creation and income generation (EPWP)</p> <p>Sellers of properties must notify the Department of Environmental Affairs and potential purchasers in writing of the presence of listed invasive species on that property</p>
	<p>Early warning strategies to wildland fires be revised and updated</p> <p>The entire early warning strategies must be revised and updated and be made user friendly for those who are at risk. As previously stated in the report, the early warning system must be designed to serve people effectively, and such systems must be integrated and link all actors in the early warning chain, including the scientific and technical community, public authorities and local communities. Finally early warning must be complemented by professional training and capacity building activities and the allocation of resources to enable timely actions to be taken to avert loss. This applies to all areas.</p>	<p>George Municipality:</p> <p>Fire Brigade Services</p> <p>Disaster Management Services</p> <p>SANS Park</p> <p>Cape Nature</p> <p>SCFPA</p> <p>Land Owner's Association</p>	<p>Early warning strategies have been revisited and updated accordingly</p> <p>Workshops were implemented offering professional training and capacity building activities</p>

	manure piles. This can prevent disturbance, edge effects and nutrient run-off into the veld, which promotes alien grass invasion.	George Municipality DEA&DP DoA	
Drought			
Physical Planning	Promote conservation agriculture <ul style="list-style-type: none"> Use effective conservation farming methods and continued conservation and clearing of streams and river from alien vegetation (limit flooding), clearing of rural areas from dense alien vegetation that might result in a fire risk, maintaining fire breaks around farms; Promote alternative uses within conservation areas that support the sustainable management of these areas; Effectively manage erosion using conservation agriculture methods, planting of perennial legumes and management of contour lines. The uptake or increased use of legume rotations build soils by contributing organic nitrogen, reduce soil and crop borne diseases, help to reduce input costs and promote income diversification; A shift towards minimizing soil disturbance during tillage. Similarly, by reducing tillage farmers cut down in diesel and labor costs while improving soil structure, soil organic carbon (SOC) and water retention; Thick layers of compost and mulches helps to keep the moisture in the soil and the evaporation as minimum as possible. Conservation of the hill landscape - areas contain pockets of natural vegetation that provide part of the natural backdrop in the rural landscape. The more biodiversity you have in an orchard or vineyard, the less evaporation occurs, so you don't have to irrigate as much, so water can be saved; A bottom-up approach with active community participation for drought risk management in planning, decision-making and implementation, is essential to move from policy to practice. Share and implement indigenous/local knowledge regarding drought coping-capacities that have been effective for many generations; With a drought onset implement a stock reduction scheme. Keep livestock young and uplift culling standard. This will improve the quality of animals for better breeding standards. 	George Municipality DoA Farmer Associations	<p>Replace monocultures of climate-sensitive, high-yielding varieties with drought-resistant varieties and inter-cropping or rotational systems</p> <p>Landowners are monitored to ensure that they are only utilizing a third of their land for grazing capacity</p>
	Protect water resources and water catchment areas and diversify where possible <p>Being reliant of surface water means a heavy dependency is placed on rainfall. With climate change already being a reality, it would mean that weather invariability could place further strain on an already stressed water system.</p> <p>Save water through water harvesting, effective sustainable and beneficial use of water, building storage dams for winter water, reuse water and storm water (industrial use, irrigation of golf courses, farms, and in community gardens), promote the use of water tanks at people's homes and monitoring irrigation schemes Address the lack of water through protecting water sources, maintaining water catchment areas, diversifying water sources and maintaining water source quality and groundwater.</p>	George Municipality DWS	<p>Water sources are protected.</p> <p>Reduction in water leakages</p> <p>Water source and groundwater quality protected</p> <p>Retain blue drops status</p>
	Monitoring of boreholes <p>It is of vital importance that the Municipality initiates a strategy to improved borehole monitoring capabilities.</p> <p>A lack of reliable groundwater data makes it difficult to make accurate assessments of the availability and abstraction potential of groundwater. The reliability of groundwater data and information is particularly important for effective and sustainable groundwater management. Reliable data can only be achieved through continuous monitoring. In fact, failure of groundwater supply schemes is always either due to failure of infrastructure (e.g. a blocked borehole screen) or unsuitable pumping regimes (e.g. pumping at exceedingly high rates for short periods of time) that are related to a lack of monitoring." Monitoring for operational purposes is either by means of a 'dipmeter' or recorder within an operational borehole, or by means of a recorder on a</p>	George Municipality DWS Garden Route District Municipality Western Cape Disaster Management Centre	

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>monitoring borehole placed with a well-field - aimed at specifically capturing the condition of that well-field. There are a number of facets to monitoring for operations and maintenance:</p> <ul style="list-style-type: none"> - Monitoring of water levels - Monitoring of water quality - Monitoring of pumping rates - Monitoring of electricity consumption - Monitoring of water demand 		
<p>Ensure the Ongoing Processes related to the River Health Programme</p> <ul style="list-style-type: none"> • Keep riparian zones intact; where transformed by past farming practices, rehabilitation is advised. The well-being of river ecosystems is heavily dependent on the health of the adjacent natural vegetation, or 'riparian habitat'. This vegetation stabilises the river bank, filters pollutants, helps maintain a natural water temperature, contribute organic matter in support of aquatic life and acts as a buffer to adjacent land uses. Riparian zones must be kept free of alien plants and bulldozing should be avoided at all cost, unless this has been authorised by the regulatory authority (e.g. after a flood event). • River banks should be gently sloped (only where already transformed and not where the river bank is naturally steeply sloped) and planted with local indigenous riparian vegetation to prevent erosion and improve water quality. • Allow adequate strips or buffer zones of indigenous vegetation next to the riparian zone to minimise the effect of fertiliser and pesticide run-off from cultivated land. The width of the buffer zones will depend on the size and characteristics of the river. • Ensure that an 'ecological reserve' (i.e. enough water for river ecosystem to function adequately) remains in the river. High levels of water abstraction, especially during summer, drastically decrease flow, concentrate pollutants, increase water temperature and impact on river health. Minimise water use by implementing 'best practice' such as drip irrigation. If possible, abstraction from rivers (in the winter-rainfall areas) should take place in winter and the water should be stored in a dam for use in summer. • Consider how farming practices in catchment areas may be improved to reduce sedimentation and water-quality problems. Using 'biological farming' methods will minimise the negative impacts on water quality (see Section 8 for more information on biological farming practices). • The damming of rivers and building of weirs are not permitted by DWS (except where the necessary authorisation has been obtained) as dams reduce flow, cause sediment build-up in the dam basin and prevent species migration. • The use of appropriate river and wetland management and rehabilitation methods is a complex science, and freshwater experts should be consulted when required. Depending on the level of assistance required, advice may be at no cost (generally from government agencies) or if private, will be charged for. • Become an active member of your area's Water User Association (WUA). 	<p>George Municipality CapeNature DWS</p>	
<p>Protect and maintain water sources against pollution, through being vigilant of sewer leakages</p> <p>George, like most towns on the Garden Route, experienced major population growth since the beginning of the millennium, which placed significant pressure on ageing and inadequate infrastructure that was never designed to handle such large numbers of people and properties. Several river systems that feed into the estuary run through informal settlements where unhealthy living conditions such as 'long drop'-toilets and dumping contribute towards pollution. Throughout Knysna, residents and businesses have through the years illegally connected their rainwater outlets to the main sewer system. As the Garden Route is an all-year rainfall area that experiences significant amounts of rain at a time, stormwater can be substantial in built-up areas.</p> <p>Main sources of pollution:</p>	<p>George Municipality DoA DWS</p>	<p>Borehole and groundwater quality are monitored and protected against pollution</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	<ul style="list-style-type: none"> Failure to capture pollutants (human and animal faeces, carcasses of dead animals and other solid waste) in the upper parts of the catchment; Inadequate infrastructure to manage waste in the sewer system between upper catchment and sewage works; Inadequate and outdated sewage works; Massive ingress of storm water into sewers exacerbating infrastructure problems; Ingress of other materials that cause blockages; Inadequate systems to manage problems. 		
Management	<p>Augment water supplies</p> <p>The Western Cape is currently experiencing a severe drought, which also impacts on the availability and supply of bulk water of the Garden Route District Municipality and yield of the George Municipality's own existing surface and groundwater sources. It is of vital importance to implement measures to lower the future water requirements and improve the augmentation of the Garden Route Municipality's existing water sources are therefore critical at this stage.</p> <p>Encourage water demand management and enhance irrigation efficiencies.</p> <p>Promote biological farming and other techniques to reduce nutrient loads in hydrological systems.</p> <p>Supply water rights for land reforms projects.</p> <p>Ensure balance between water supply infrastructure for agriculture and urban development.</p> <p>Strengthening the monitoring of rainfall, stream flows, groundwater levels and water quality.</p> <p>Repair and maintain dams, reservoirs, boreholes and of irrigation systems to save water and prevent wastage.</p> <p>Plan for the potential impact of climate change – Investigate alternative water resources to alleviate water shortages during droughts.</p> <p>Encourage the planting of drought-resistant fodder plant species.</p>	<p>George Municipality</p> <p>Farmer Associations</p> <p>Water User Associations</p> <p>DWS</p> <p>DoA</p> <p>DEA&DP</p>	<p>Execute water demand management measures</p> <p>Enhance irrigation efficiencies</p> <p>Promotion of biological farming reducing nutrient loads in hydrological systems</p> <p>Ensure water balance between agriculture and urban development</p> <p>Maintenance and repair of dams, reservoirs, boreholes and irrigation systems (minimize water wastage)</p> <p>Plan for future impacts of drought</p> <p>Encouraging planting of drought resistant fodder</p>
	<p>Develop a drought management plan for commonages</p> <p>Prepare a plan to indicate which commonages land should be conserved and where agriculture can occur. All existing and potential land suitable for intensive agriculture must be protected from conversion to other uses including conservation.</p> <p>Assist small-scale farmers and farmers in urban areas to farm in a suitable manner with the minimum dependence on irrigation.</p> <p>Ensure the sustainable use of resources by applying grazing capacity guidelines.</p>	<p>George Municipality</p> <p>DoA</p> <p>Farming Associations</p>	
	<p>Diversification of farming activities</p> <p>Diversification involves reduction of income shortfalls by engaging in livelihood strategies that have negatively or weakly correlated returns which may involve diversification of crops and livestock, spatial diversification of farms, and diversification from farm to non-farm activities. Drought-related policies and plans should emphasize risk reduction (prevention, mitigation and preparedness) rather than relying solely on drought relief. Temporal adjustments of cropping patterns and adjusting planting dates and crop establishment methods; changing weeding and fertilization practices; and use of soil and water conservation practices</p>	<p>George Municipality</p> <p>DoA</p> <p>Farming Associations</p>	<p>Diversification strategy has been considered and processes have been implemented</p>
Seismic Hazard			
Physical Planning	<p>Conduct a risk assessment to identify high risk areas</p> <p>Nature is unpredictable and can at any time create a devastating or phenomenal experience. As history has taught us is that nature is unpredictable and with the low-level of awareness of seismic event within South Africa it is critical that an in-depth study be conducted to put uncertainties to rest. It is recommended that, in collaboration with Garden Route District Municipality, that a District-Level Hazard-Specific Risk Assessment be conducted with Seismic Experts to determine exactly where fault systems lie in proportion to Municipal location. This is the only way</p>	<p>George Municipality:</p> <p>Consultant (such as Council of Geoscience)</p> <p>Garden Route District Western Cape Disaster</p>	<p>Funding has been sourced to appoint a seismic expert</p> <p>A hazard specific risk assessment has been conducted</p> <p>High risk areas have been identified and multi-</p>

	DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	certainty can be fostered and appropriate risk reduction and contingency planning be put into place.	Management Centre	disciplinary plans have been made accordingly
Management	<p>Develop a George Municipality Seismic Preparedness Plan</p> <p>Based on the results of a hazard specific risk assessment, develop contingency plan regarding such matter.</p> <p>Conduct awareness training and training in earthquake-resistant constructions.</p> <p>Include in the plan a strategy for reuniting when safe.</p>	<p>George Municipality</p> <p>DoE</p> <p>DoH</p> <p>Council of Geoscience</p> <p>Provincial Disaster Management Centre</p>	
	<p>Help develop a new earthquake catalogue for the region centred on the Garden Route District</p> <p>This catalogue should extent in all directions to a distant of 300km from the municipal boundaries.</p> <p>Research is needed to determine if there has been episodic recurrences of relatively sudden-onset intervals of net landscape instability.</p> <p>The earthquake catalogue should be routinely updated through a formal process and form part of the GIS and spatial data infrastructure for the Garden Route District Disaster Management Centre for immediate access and display during real or simulated seismic emergency situations. This would have future use as an educational and awareness-raising tool throughout the municipal area, such as through online internet access by local schools, NGOs and interested individuals.</p> <p>Field-based investigations aimed at the recognition and mapping of seismogenic source zones should be included.</p>	<p>Garden Route District Disaster Management Centre</p> <p>Provincial Disaster Management Centre</p> <p>Council of Geoscience</p> <p>George Municipality</p>	
Floods			
Societal	<p>Severe weather disaster risk reduction public awareness and preparedness campaign</p> <p>Flood prevention workshops or mass meetings should be facilitated to create awareness.</p> <p>Special attention must be given to the most vulnerable groups i.e. very young and elderly. Flood awareness could even run as part of life skills within school in the area to emphasize risk avoidance behaviour.</p> <p>It is important that ward counsellors assist to educate communities on methods to prevent and minimise damage caused to property by floods.</p>	<p>George Municipality</p> <p>DoE</p> <p>Ward Councillors</p>	<p>Community response training is provided timeously to volunteers in all high-risk areas</p>
Physical Planning and Management	<p>Develop a severe weather preparedness plan for emergency and essential services</p> <p>Conduct a situation analysis and preliminary risk analysis.</p> <p>Identify critical infrastructure exposed to flooding and establish contingency planning.</p> <p>Identify hospital and health care facilities that are potential flood exposed.</p> <p>Adhere to and disseminate weather warnings.</p> <p>Identify each person and organization, particularly the communication between SAWS, DWS, DoH, EMS, WCDM: Roads and local municipality, and establish each role and function to ensure a coordinated, effective and efficient response.</p>	<p>George Municipality</p> <p>DWS</p> <p>DoH</p> <p>EMS</p> <p>WCDM: Road</p>	<p>Identify and characterize the risk issues and risk hotspots</p> <p>Information is circulated to all relevant stakeholders</p> <p>Contingency planning is formulated for high-risk areas and included in the Spatial Development Plan</p>
Management	<p>Update Storm Water Management Plan</p> <p>Storm water Master Plan in process of being updated. This will indicate where capacity is a concern and highlight areas to be prioritised for upgrading/installation of storm water infrastructure</p> <p>In the GLM the absence of proper storm water infrastructure in certain areas is a reality with some dwellings are built on the fringe of stormwater channels or directly opposite stormwater outlets. Run-off in channels worsened by dumping of household refuse, thereby impeding the flow of run-off, causing water to rise and spill over much faster. There are also homes that were built</p>	<p>George Municipality</p> <p>Consultant</p> <p>MIG</p>	<p>Funding is ring-fenced and the storm water management plan is updated for the George Municipality</p> <p>Ongoing maintenance and upgrading of stormwater infrastructure</p>

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>on a high-water table, in close proximity to underground springs, with no or very few drains, which were often blocked. In some cases, houses were built directly under stormwater drainage outlets. Some homes are located on lower part of the slopes, as a result of poor town planning. It is suspected that, this is due to constrained governance, reflected in poor regulation of building standards and municipal oversight of building contractors.</p> <p>Keep the residential roads free from rubble and debris to assist with mitigation of damage caused by flooding.</p> <p>Ensure ongoing, frequent maintenance and upgrades of water catch pits in and around communities</p>		<p>Regular cleaning of storm verges.</p> <p>Clearing of stormwater channels</p> <p>Effect stormwater management to prevent pollution in the estuary</p> <p>Installation of oil/litter traps at strategic places in the storm water network</p> <p>Programme to educate communities regarding effective storm water management</p> <p>Building and repairing of water culverts</p>
<p>Determine flood setback lines and adhere to strict building regulations</p> <p>Development is not supported within the 100-year floodline. In addition, development should be setback from the 100-year floodline. Buffers ranging from 10 to 40 metres are generally applied to the floodline to ensure protection of habitat outside of the flood zone. Where the drainage system is too small to calculate a floodline, then development must be setback at least 32 metres from the top of the bank of the drainage line. This ensures that the heads of catchments are kept open allowing for more infiltration and less flooding downstream.</p> <p>The 1:50 year flood line should be determined, and development should not be permitted within the floodline. Where the drainage system is too small to calculate a floodline, development must be setback at least 32 metres as set out in the NEMA regulations. This ensures that the heads of catchments are kept open allowing for more infiltration and less flooding downstream.</p>	<p>Garden Route District</p> <p>George Municipality</p>	<p>Specific land use within floodplain is delineated</p>

	<p>facilities, which will also provide opportunities for the creation of job opportunities.</p> <ul style="list-style-type: none"> Effective and fair management of State dam basins, water resources and catchment areas. Take social, economic and environmental impact into consideration. Include all land located within the catchment areas of a dam or water resource to effectively manage the health of the system. 		
Engineering	<p>Provision and planning of bulk infrastructure must be in line with the future spatial growth and planning of the towns and be cost effective.</p> <p>Determine the need for bulk infrastructure in George as required for the proposed growth potential and planned projects.</p> <p>Identify the proposed best location for the expansion and the infrastructure planned in the different towns.</p> <p>Provision of service to the community in an effective and sustainable way by prioritising spending on infrastructure in areas with an economic growth potential.</p> <p>Provision of environmentally friendly infrastructure and services in rural areas to not only improve the quality of life of people living in the rural areas but also to ensure continued environmental management and protection.</p> <p>Provide and deliver rural infrastructure and services for water harvesting infrastructure, sufficient storage capacity for drinking water and expanded distribution networks where necessary;</p> <p>Investigate alternative water resources for the George to plan for future drought conditions.</p>	<p>George Municipality</p> <p>Water User Associations</p> <p>DWS</p> <p>Garden Route District</p>	
Sewage and Drainage/Waste Management Disruption			
Physical Planning	<p>George is kept clean, safe and green</p> <p>The Municipality should aim for the following:</p> <ul style="list-style-type: none"> To provide an integrated waste-management service for the total municipal area; To provide basic services to informal settlements that comply with the minimum standards; To build on current recycling initiatives and secure a meaningful reduction in waste levels; To maintain and improve on Blue and Green drop status in water and sewage services by the retaining of capacity and the further improvement of capacity; To build on the current waste co-operative governance relationship. <p>Provide and support an effective environment</p> <p>Provide and deliver rural infrastructure and services for sanitation i.e. individual sewerage works (not connected to existing networks) to small rural settlements, grade sewage works and promote and implement Garden Route District Municipal Rural Bathroom Subsidies;</p> <p>Upgrade sewage systems where applicable and connect remaining septic tanks and buckets to flush systems;</p> <p>Provide and deliver rural infrastructure and services for waste i.e. establish transfer stations at appropriate locations in rural areas and in rural towns and provide sewerage services as per national norms in all rural towns;</p> <p>Encourage small sewerage treatment plants for high density farms and rural settlements;</p> <p>Promote small sewerage treatment plants for high density farms and rural settlements;</p>	<p>George Municipality</p> <p>George Municipality</p> <p>MIG</p> <p>DoH</p>	<p>Focus on maintenance and upgrade</p> <p>Provide services in areas that are lacking</p> <p>Encourage small sewerage treatment plants for high-density farms and rural settlements</p>
Social	<p>Investigate and address the issue of illegal dumping</p> <p>Efforts should be made to address illegal dumping throughout the municipality.</p> <p>Investigate the provision of transfer stations along major routes and at large farming operations;</p>	<p>George Municipality</p> <p>Ward Councillors</p>	<p>Decreased in illegal dumping cases within municipality</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	Consider more options for recycling of domestic waste as well as garden waste for composting.		
	An integrated programme to educate the general public in anti-littering and responsible domestic waste management and disposal This should include: <ul style="list-style-type: none"> • Problems caused by refuse in storm water systems; • Responsible and correct use refuse transfer stations; and • General environmental health problems caused by indiscriminate dumping of waste material/refuse 	George Municipality Ward Councillors	A strategy has been implemented
	Promote waste separation at source (from urban to rural and informal areas) Encourage waste recycling at households. Evaluate and control the environmental impact of on-farm waste disposal.	George Municipality Ward Councillors	Waste separation in rural and urban areas increase
Electrical Supply Disruption			
Physical Planning	Provide and deliver rural infrastructure and services for electricity i.e. support the installation of sufficient transformers to provide electricity to households and the generation of alternative energy; Maintenance and upgrading that sustain and improve the current condition of electrical infrastructure Ensure sufficient electricity capacity for planned developments (built environment) that are feasible. Generate alternative energy.	George Municipality MIG	
	Address Service Delivery issues to informal area The supply of electricity and security lighting in all areas of George is a priority, but Thembaletu is receiving the highest priority. There are almost 5 000 informal houses in Thembaletu without electricity. It is essential that all citizens in George have access to basic services as provided by local government. Access to basic services by all citizens should be 100%. All service-delivery constraints need to be mitigated. It is also essential that the municipality ensures that strategic measures are in place to manage risk areas for service delivery such as shortage of electricity	George Municipality MIG Department of Human Settlements Department of Energy	
Social	Improve inadequate street lighting in rural/informal areas Limited street lights are generally associated with high crime zones.	George Municipality MIG	Areas with inadequate street lighting have been addressed
	Encourage rural residential development that allows environmentally friendly services such as solar power and eco-friendly sewerage treatment plants Promote the use of solar water heaters, PV panel, grey-water recycling, waste separation at source and passive building design to minimize energy, solid waste and water demand. Community participation in the form of situational awareness and the appropriate risk reduction and contingency initiatives improves continued service delivery In George Municipality.	George Municipality Ward counsellors	Alternative eco-friendly energy-saving measures have been considered and implemented accordingly
Economic	Source funding to improve institutional management. Like many municipalities in South Africa, maintenance of existing municipal assets is generally in competition with the need to extent services to poor communities. Rehabilitation and maintenance of existing infrastructure is a priority which needs to be addressed.	George Municipality MIG	Training and contingency planning is improved Maintenance of infrastructure is improved
Management	Prepared policy for sighting and approval for renewable energy projects. George is also becoming an important role-player in the green industry relating to solar energy and other green industries which promote clean manufacturing principles. This provides an opportunity for George to become a national benchmark. Local communities situated south of the N2 are still situated furthest from facilities and employment. A special investment node	George Municipality DEA&DP Consultant	Research into renewable energy projects have been initiated Projects are environmentally sensitive with conservation in mind

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	<p>has been identified south of these areas and continued efforts need to be made to attract suitable investors to establish a new node with a unique niche in this area, which will effectively bring employment and investment opportunities closer to the urban poor. Simultaneously the economic base of George is broadened and its position as a regional service centre will be strengthened.</p> <p>Promote domestic and large wind and solar energy projects subject to appropriate guidelines and sitting principles.</p> <p>Alternatively off-grid solutions such as small package plants, methane gas digesters or biolytic systems should be identified. Responsibility for the maintenance of these systems must be borne by the owners.</p> <p>Renewable energy forms an important part of the energy mix, which also includes electricity generation from gas, nuclear, solar, wind, hydro and coal.</p>		
	<p>Research climate change projections to improve electricity grid's operational preparedness.</p> <p>Distinguishing local climate trends is essential as climate may not change uniformly across large areas. Furthermore, there is a clear demand for reliable climate information by both local authorities and land managers in order to ensure that climate risk management and assessments of climate change are locally relevant.</p> <p>Also, it is proposed that electricity grid operators disconnect high voltage lines from the rest of the grid to protect high voltage transformers during solar storms.</p>	<p>Garden Route District Municipality</p> <p>George Municipality</p> <p>Consultant</p>	<p>Detailed studies are conducted of the changes in diurnal temperature ranges and a broader regional scale and the continued monitoring of both climate observations and species-level changes</p>
Road Accidents			
Engineering	<p>Upgrading and continuous maintenance of roads in rural and urban areas.</p> <p>Roads, in the form of road access, play an integral part towards local economy stream.</p> <p>The maintenance of the roads within the municipal area remains a challenge with a limited operational budget. The neglect of several years has since culminated in a situation that requires more maintenance and capital expenditure than the limited budget of George Municipality can afford.</p> <p>Incorporate the continuous upgrading and maintenance of the urban road network in the yearly budget;</p> <p>Ensure adequate transport networks to get to work and school etc. Keep dirt roads in rural towns where they form part of the character of the town. It is however important to design and maintain dirt roads in the appropriate manner to limit storm water impact on roads;</p> <p>Prioritise maintenance and development of identified activity streets in towns;</p> <p>Although road upgrades are already underway in certain areas but areas in need of upgrades have to highlighted as part of future development planning</p> <p>Strengthen Regional roads – that provide links between main towns as well as with surrounding areas</p>	<p>George Municipality</p> <p>MIG</p>	<p>Degraded roads, potholes and disintegration of the tarred surface are upgraded</p>
	<p>Identify regional routes unable to accommodate abnormal freights</p> <p>The regional routes in the area currently lack the capacity to sustain abnormal loads and are generally only suitable for freight and private motor traffic only.</p>	<p>George Municipality</p>	<p>Research and identify alternate routes</p>
Management	<p>Develop a comprehensive transport plan for future expansion of urban areas</p> <p>Realistic affordable transport plan to accommodate the increased traffic within the urban areas – collaborate with Provincial Roads department.</p>	<p>George Municipality</p> <p>Provincial Roads</p>	<p>Future growth is integrated in transport plan to ensure infrastructure proportionate growth</p>
	<p>Research impact of climate change on road infrastructure</p> <p>There is no seasonality associated with climate-change. The continued use of non-renewable fuel will exacerbate the changes in climatic conditions (as part of a collective impact) due to the release of ozone depleting gases into the atmosphere. Climate change will lead to higher maximum temperatures and more associated heatwaves. This could potentially lead to an increase threat</p>	<p>George Municipality</p> <p>Consultant</p>	<p>Conduct a study on the impact of climate change on road structure</p> <p>High risk areas are identified</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	to infrastructure exceeding design specifications relating to temperature e.g. traffic lights and road surfaces.		
Social	An awareness and education programme to inform pedestrians on the safe use of roads There are at present several initiatives to enhance pedestrian safety, these should be pursued. Such programmes should be targeted at schools. This applies especially to areas with high-pedestrian casualties.	George Municipality Ward Councillors	Safety education and awareness programme initiated Safety awareness roadshow in the community
	Support the provision of pedestrian friendly environments in the urban areas as part of effective land use planning Provision of formal safe pedestrian/cycling routes along main activity routes. Strive to provide pedestrian routes that is accessible to disable people in the communities. Plan the location of new residential areas close to working opportunities to limit vehicle movement in the urban areas.	George Municipality MIG	Increase in pedestrian-friendly environments
Physical	Improve mobility Strengthen Regional routes and mobility between urban agricultural service centres. Strengthen economic access and links i.e. maintain existing road, promote links between surrounding municipalities and rural regions and lobby for new and planned regional network through George Municipal Area. Strengthen railways and services i.e. to transport agricultural freight and to promote tourism between George towns and surrounding regions; Strengthen Communication networks and promote establishment of information centres in rural areas.	George Municipality MIG	Road infrastructure is upgraded in rural areas. Road linkages connected to increase mobility for rural/outlying areas
Hazmat (Road)			
	A structured and integrated programme that builds capacity to response to Hazardous Material Transport Incidents Improve law enforcement capacity. Employ sufficient support team to conduct frequency inspections. Ensure fire extinguishers are in place and serviced regularly. Provide training and special skills training. Identify specialized role players for HAZMAT cleaning	George Municipality Private HAZMAT companies (such as Spilltech) Garden Route District Municipality	Initiate a capacity building strategy Train local fire fighters with basic hazmat response capabilities Impose fines and higher licence fees for offenders Roads and road signs are improved MoU drafted between George Municipality and registered HAZMAT cleaning companies
Civil Unrest			
Management	Address housing backlog Service delivery also needs to be improved regarding low-cost housing and the provision of GAP housing. The Council needs to make land available for developers to ensure that more affordable housing is made available as the demand for housing is still much more than the supply especially for the low-income earning population. Focus on completing backlog as soon as funds allow it.	George Municipality Department of Housing	Decrease in housing backlogs
	Address areas in needs of Primary and/or Secondary Schools Identify areas that are disadvantaged with regards to vast distances between towns and schools. Conduct a needs-analysis in each Ward to determine whether a need persists to each respective area.	Department of Education MIG George Municipality	A needs-analysis has been conducted Schools has been built
	Develop and initiate a multifaceted strategy aimed at addressing the poor residing on the urban fringes/rural areas. <ul style="list-style-type: none"> Dissatisfaction with poor directly correlates with social unrest. 	George Municipality	Address basic services issues Address service delivery backlog

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<ul style="list-style-type: none"> It is essential that all citizens in George have access to basic services as provided by local government. Access to basic services by all citizens should be 100%. All service-delivery constraints need to be mitigated. It is also essential that the municipality ensures that strategic measures are in place to manage risk areas for service delivery such as shortage of electricity and water, and that the green industry is stimulated to increase recycling practices and water- and electricity-saving practices are encouraged. <p>The Municipality should look at the following:</p> <ul style="list-style-type: none"> Stimulate local economic development; Consolidating, integrating and reinforcing settlement structures; Address basic service issues such as water, electricity, sewage management; Improving service delivery; Strengthening rural-urban linkages; Promoting socio-economic development and increasing thresholds for service delivery and social facilities. The socio-economic situation In George Municipality area has stark contrasts. The population consists of a minority of wealthy residents and a majority of poor residents. The division between the wealthy and poor correlates strongly with racial groupings. The black and coloured populations are among the poorest residents of George. Low levels of education and income, and high HIV/AIDS and Tuberculosis rates are characteristic in the poorer communities. Joblessness and poverty are serious social-ill, and one can never underestimate the impact that it has on one's life. In summary, the following factors have been identified that is believed to interlinked in George Municipality: <ul style="list-style-type: none"> Slow pace of land reform, especially in rural areas; High level of inequality (wide gap between rich and poor); Limited progress with BBBEE at a local level; Relatively high rate of unemployment and poverty; Impact of fire disaster on the distribution of income and scale and incidence on poverty will be felt; Skills gap exists in basic business techniques; Limited entrepreneurial culture amongst local people; High expectation of rural communities for municipality to create jobs; Inconsistent understanding of economic development objectives; Increasing levels of drug related crime and crime induced poverty; Increasing level of violence against women & children; Increasing incidence of HIV/Aids and TB; High levels of alcohol & substance abuse especially amongst the youth; Dependency on social grants and wage income by the poor; Low levels of educational attainment by labour force; Increase teenage pregnancies; High drop-out rate in schools; Limited integration of communities; Threat of civil unrest/regular protest action; Workers laid off as result of disaster disengage from economy due to limited alternative opportunities; Unrealistic expectation of rapid and complete recovery from residents and business owners. 	<p>Department of Social Development Department of Human Settlements MIG</p>	<p>Develop a strategy to accommodate housing backlogs</p> <p>Improve Service delivery</p> <p>Improve conditions of roads</p> <p>Integrated Public Transport Network</p> <p>Provision of low-cost housing and GAP housing</p> <p>Strengthen rural-urban linkages to increased accessibility to services</p> <p>Promote socio-economic development.</p> <p>Empower the poor with skillsets</p>
<p>Implement subsidized transport scheme for school children</p> <p>The high cost of traveling and accommodation to educational facilities outside the boundaries of the municipality makes further education unaffordable. It encourages early drop-out in schools as students realise their parents will not be able to pay for further studies and they will be limited to first-entry jobs. This situation limits residents' employment and income generating opportunities as low skills levels implies low remuneration. Many of the young people that cannot afford the cost of higher education ends up as participants</p>	<p>George Municipality Taxi Association</p>	

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>in the Expanded Public Works Programme or Community Works Programme that provides a safety net against poverty but have no real potential of developing marketable skills in the employment sector, dooming participants to a life of borderline poverty. It is vital that George Municipality extends the Go George to the poorer areas.</p> <p>Stimulate the local economy</p> <p>It needs to target the service economy to diversify its economic base and strengthen those sectors that living up to its potential. This will stimulate economic activity and result in new business sales and job creation to alleviate poverty. The aim is to ensure that an annual growth rate of 8% is achieved. It is just as important to focus on retaining and expanding established businesses and re-instilling investor confidence in the George Municipal area. This will be done through business retention and expansion strategies that <i>inter alia</i> facilitate development in targeted areas identified in the MSDP. For the economy to grow it is essential that the correct infrastructure is in place to accommodate current and new business activities. Therefore, infrastructure investment must be a primary focus for the next 10 to 15 years. The leading sectors, such as the Finance and Business services sector, need to be stimulated to ensure that George is a regional services hub in the Garden Route and Klein Karoo area. Sector strategies need to be developed to ensure economic stimulation to promote agro-processing which is linked to the manufacturing sector as well as tourism development specifically for the sports and business tourism industry.</p> <p>The natural and agrarian assets of the municipal area have vast potential to generate revenue and employment opportunities. Investment and facilitation of growth in the agricultural sector will not only secure sustainable employment in the primary sector but also promote food security. It is essential to retain the value and attraction of these assets that can contribute to the growth in George's tourism and agricultural sectors. Due to the importance of the educational facilities such as NMMU and South Cape College, education needs to be a priority in terms of future growth potential of the municipal area.</p>	<p>George Municipality EPWP The Economic Development Department</p>	<p>Revitalising the Central Business District. Re-instill investor and consumer confidence. Job creation through the Expanded Public Works Programme (EPWP) Undoing the segregated spatial legacy that former regimes have left Safeguarding natural and agrarian assets against development pressures</p> <p>IDP¹ laid out the following objectives:</p> <p>To create and facilitate an enabling environment for economic development in George.</p> <p>To ensure the development of participatory, practically implementable economic development and business retention and expansion strategies.</p> <p>To ensure that industry support is focused on high-growth potential areas, with high job absorption ratios.</p> <p>To leverage construction industry potential through strategic housing-related projects.</p> <p>To focus on building a revitalised and interactive CBD through a City Improvement District.</p> <p>To establish incubators, clusters and centres of excellence to contribute meaningfully to the demands of a growing economy.</p> <p>Red-tape reduction at all administrative levels.</p> <p>To ensure that Spatial Development Framework encourages sustainable development.</p> <p>To maximise job creation opportunities through government expenditure (e.g. EPWP).</p> <p>To establish a Science Park.</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
			<p>To swap strategic land and buildings with other government departments to unlock economic potential.</p> <p>To promote George as a sports tourism and business destination.</p> <p>To identify an educational and research hub and to facilitate the continued growth of NMMU in George.</p> <p>To improve planning and regulatory frameworks to encourage job-creation.</p>
	<p>Develop a structured programmes aimed at development for the vulnerable</p> <p>Many of the young people that cannot afford the cost of higher education ends up as participants in the Expanded Public Works Programme or Community Works Programme that provides a safety net against poverty but have no real potential of developing marketable skills in the employment sector, dooming participants to a life of borderline poverty. A better educated and more highly skilled workforce is the most pressing long-term priority for the economy. It is vital to create learning and work placement opportunities for unemployed youth in the Western Cape's economic sectors in order to improve the future employment prospects of participants. In addition access to internet facilities is also of vital importance to connect people to the unlimited body of information.</p> <p>Structured, professional and sustainable youth development programmes should be implemented throughout the area.</p> <p>Produce skills development programmes addressing youth from vulnerable areas.</p> <p>Address the issue of substance/alcohol abuse.</p> <p>Support reducing and/or eliminating school dropout rates.</p> <p>Provide access to internet in the rural areas.</p>	<p>DoE</p> <p>George Municipality</p> <p>Social Development</p> <p>EPWP</p>	<p>Empowerment campaigns are initiated aiming at skills development based on local needs</p>
	<p>Create a skills database</p> <p>Create a database of all unemployed and employed skills in the area.</p> <p>Approach MQA SETA to assist with the development of such as programme.</p>	<p>George Municipality</p> <p>MQA SETA</p> <p>EPWP</p>	<p>A skills database is necessary to maximise employment status within local boundaries</p>
Structural Fires			
Engineering	<p>Lumkani – early warning fire detectors.</p> <p>Lumkani developed A low-cost early warning fire detector and integrated alarm service aimed at reducing the damage and destruction caused by the spread of shack/slum fires in urban informal areas. In the event of fire, the system alerts the inhabitants where the fire has started and triggers all Lumkani fire detectors within a 60m radius – creating community wide alerts. The system is also able to alert the local fire station to the location of the fire, allowing for quick response. Many cooking, lighting and heating methods used by people living in informal settlements are associated with many fire risks.</p>	<p>George Municipality</p> <p>Lumkani</p> <p>Western Cape Disaster Management Centre:</p> <ul style="list-style-type: none"> Fire Brigade Directorate 	<p>Early warning detectors are installed in high-risk areas</p>
Management	<p>Provide a policy for densification of settlements</p> <p>Improve access routes to informal settlements.</p> <p>Monitor areas with illegal electrical connections and aging infrastructure.</p>	<p>George Municipality:</p> <p>Fire Rescue and Emergency Services</p> <p>Town planners</p> <p>Ward Councillors</p>	<p>Spacing and configuration of informal dwelling complies with municipal requirements</p> <p>Decrease in illegal electrical connection and maintenance/upgrades of aging infrastructure</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	<p>Address staff and skill shortages In George Municipality</p> <p>Disaster funds for fire management will need to be attained – proactive protection of ecosystems and water is the required long-term response.</p> <p>Develop a structured programme based on the needs identified in the remote areas to recruit, train and equip volunteers to assist with area-based fire prevention and response teams.</p> <p>Hold regular fire equipment inspections.</p> <p>Host fire drills.</p> <p>Standardisation of fire hydrants.</p>	<p>George Municipality</p> <p>Garden Route District Municipality</p>	<p>Funding is sourced to establish local capacity In George Municipality</p> <p>Volunteers are recruited, trained and equipped to assist as first-line responders</p>
Air Pollution			
	<p>An Air Quality Management Plan (AQMP) must be compiled for a municipality in compliance with the requirements of the Air Quality Act, 2004 (Act 39 of 2004) and the National framework. As the George Municipality falls within the municipal area of the Garden Route District Municipality (EDM), it is imperative that the municipal AQMP must be fully compatible and aligned with the district municipality’s plan.</p> <p>In this regard, the George Municipality will pursue the vision and mission as described in the district AQMP within context of the following nine objectives:</p> <p>Objective 1: Set Air Quality Goals</p> <p>Objective 2: Set Up Air Quality Management System</p> <p>Objective 3: Carry Out Risk Assessments</p> <p>Objective 4: Assess and Select Control Measures</p> <p>Objective 5: Implementation of Intervention and Monitoring Effectiveness</p> <p>Objective 6: Revise Air Quality Goals</p> <p>Objective 7: Integrate the AQMP into the IDP</p> <p>Objective 8: Compliance Monitoring</p> <p>Objective 9: Review the Air Quality Management Plan</p>	<p>George Municipality</p> <p>Consultant</p> <p>Garden Route District</p>	<p>An Air Quality Management Plan has been compiled and adopted by Council</p> <p>In this regard, it is recommended that George executes its air quality management obligation in close co-operation with Garden Route’s Air Quality Officer. Following this approach will provide the best co-operative approach to air quality management in the George region</p>

4.3.20.8 DRR Plans for Environmental Hazards

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
Protection of Biodiversity			
Management	DEVELOP A MULTI-FACETED/MULTI-STAKEHOLDER CONSERVATION PLAN FOR THE AREAS OF BIODIVERSITY. Neglect or unwise management can result in invasive alien plant infestation, soil erosion, overgrazing of veld and inappropriate fire regimes, any of which can have devastating impacts on the natural environment. Regulate rural development according to bioregional planning initiatives. Implement effective overlay zones in rural and urban areas to identify conservation areas. Management of conservation areas include: <ul style="list-style-type: none"> - Remove alien vegetation and increase water volumes and biodiversity; - Prohibit potential veldt fires and promote the appearance of the mountain landscape; - Manage the necessarily veldt fires to ensure seeds germinate; - Establish climate change corridors and formal Conservation areas; Protection of the natural landscape features In George as a cultural resource, i.e. rolling landscape of undulating hills with agricultural uses, prominent mountains that provide a link and backdrop. The environmental resource base of the KMA as its most important economic asset. The spatial management of growth and development should protect,	George Municipality CapeNature SANS Park Garden Route Botanical Society DoA Farmers Association Consultant (if needed)	Conservation plan developed based on identified critical biodiversity hotspots (that includes endangered areas). Initiate a monitoring and evaluation process thereafter.

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>change and include the following so that this asset can be enhanced to the benefit of all communities.</p> <p>To sustain the environmental assets of the George Municipal Area the continuity of biodiversity networks, systems and features needs to be protected through a clear, well managed and accessible municipal green network.</p> <p>This green network should:</p> <ul style="list-style-type: none"> • tie in with regional and national biodiversity corridors • link rivers, wetlands, Critical Biodiversity Areas and other remaining green areas • be edged by appropriate buffer uses • provide economic opportunities associated with tourism, responsible harvesting and recreation, <p>This network should protect:</p> <ul style="list-style-type: none"> • irreplaceable indigenous forests and endangered fynbos types from overexploitation and development • coastal dunes as part of a larger ecological system • water bodies from pollution and inappropriate development. <p>In parallel the unique character and qualities of the GLM should be enhanced by recognising and ensuring statutory protection of:</p> <ul style="list-style-type: none"> • Scenic landscapes, visual landmarks and • scenic routes from obtrusive and unattractive • development (e.g. security fences and impacts on ridgelines) <p>The small town, coastal and forest characters of all of George settlements to ensure that the economic, social assets of the environment are optimised, the following changes will be required:</p> <ul style="list-style-type: none"> • Rehabilitate green corridors, especially degraded rivers to improve their amenity and ecological function • Manage the interface between existing urban development and green corridors to improve ecological function, amenity and safety. <p>In recognising the economic, social and financial value of the environment as the key underpinning of the local economy, opportunities to introduce new elements of the municipal green network should include:</p> <ul style="list-style-type: none"> • Shifting mind sets to recognise green spaces such as indigenous forests as economic and social assets that can play a role in mental well-being and socio-economic integration • Demarcate new areas for rehabilitation and productive agricultural and ecological functions that complete and extend the green network of the GMA • Introduce appropriate management and use, including the co-location of social facilities and other activities to improve the safety of George forests, dunes, riverfront, beaches, mountains and wetlands <p>Challenges:</p> <ul style="list-style-type: none"> • The impact of the disaster on the natural landscape and system requires both immediate hazard mitigation and long-term rehabilitation measures. • Climate change has a direct impact on agricultural production, the sustainability of the community and vulnerability to extreme weather events. • To prevent a similar disaster from reoccurring and putting measures in place to reduce impact. <p>Possible Interventions:</p> <ul style="list-style-type: none"> • To facilitate the improved management of our environment. • Commission research on alternative energy sources to reduce pollution of the estuaries. • Develop a comprehensive Climate Change Adaptation Strategy (Climate Change Sector Plans). • Pro-active strategy to mitigate the risk of potential environmental disasters. • Effective implementation of an alien vegetation eradication programme on state- and privately-owned land. 		

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<ul style="list-style-type: none"> • Implementation of the proposed Mission: Zero Waste initiative. • Implementation of an incentivised green rebates policy. • Promote inclusive living spaces. • Identify hazard prone areas / hotspots. • Prioritise areas in accordance with long-term conservation objectives and what needs to be done in which time frame to ensure these objectives. • Short-term rehabilitation (e.g. clearing of alien vegetation, stabilisation of slopes) to be prioritised based on factors that affect slope erosion and long-term conservation priorities. <p>With regards to Fynbos Conservation it is recommended that:</p> <ul style="list-style-type: none"> • Maintain the appropriate fire regime and prevent overgrazing, infestation by invasive alien plant species and over-abstraction of groundwater in these ecosystems. • Avoid any kind of impacting land use in habitat associated with Critically Endangered and Endangered ecosystems or species, particularly in corridors and at boundaries between vegetation types. <p>Lowland Fynbos:</p> <ul style="list-style-type: none"> • Avoid fragmentation of lowland fynbos habitat and disturbance at the edges of vegetation patches. This is because lowland fynbos vegetation types are prone to infestation by invasive alien species, the risk of which increases with increased fragmentation and disturbance. • Avoid locating housing in lowland fynbos habitat (or take measures to minimise impacts when locating housing in lowland fynbos cannot be avoided). In general, the establishment of housing infrastructure is not compatible with conserving lowland fynbos or any other fire-prone vegetation type. However, when housing estates are established in lowland fynbos areas, nodal or clustered development is preferable to a spreading, linear layout, as nodal development is better suited to allowing periodic burning of the vegetation. To minimise the impacts of housing developments in lowland fynbos, houses should be clustered within a fire-free zone and protected with an appropriate fire belt – this holds the added benefit of minimising potential risk to infrastructure. Firebreaks must be cleared within the development footprint of the housing estate, not in the adjacent veld. Building materials should be fire-resistant, which means that thatched roofs may be inappropriate in houses that are located adjacent to, or in, natural fynbos areas. • Avoid locating any further land uses in wetlands (pans, vleis, marshes, riverine areas, drainage lines) and seeps, or on peaty soils. Wetlands must be appropriately buffered and links between wetlands and conservation areas must be maintained through the establishment of suitably managed corridors of natural habitat. • Incorporate appropriately orientated corridors of natural habitat in land-use plans to maintain linkages and vegetation community patterns, as follows: <ul style="list-style-type: none"> - take the spatial orientation of lowland fynbos communities into account when identifying representative portions of lowland fynbos to be kept in a natural state. Most vegetation communities within sand fynbos are orientated parallel to the coast – the exceptions are the riparian communities which are orientated perpendicular to the coast. - establish corridors of natural vegetation that are perpendicular to the long axis of sand-filled depressions, in order to mitigate against the loss of sand fynbos within limestone fynbos areas. - corridors in strip-ploughed sand fynbos should be at least 300 m wide. • Do not allow any further disturbance in areas that include Sand Fynbos. • Maintain the appropriate fire regime and prevent overgrazing, infestation by invasive alien plant species and over-abstraction of groundwater in these ecosystems. • Avoid any kind of impacting land use in habitat associated with Critically Endangered and Endangered ecosystems or species, particularly in corridors and at boundaries between vegetation types. <p>Midland And Mountain Fynbos:</p>		

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>Non-Negotiables</p> <ul style="list-style-type: none"> Habitat must not be modified or impacted by any land-use activities in Critically Endangered and Endangered ecosystems, corridors and vegetation boundaries, and sensitive habitats such as wetlands and riparian fringes. Avoid habitat loss or degradation in habitats that harbour Critically Endangered, Endangered or Critically Rare plant species. Remove invasive alien plants and animals and prevent their re-growth (or re-introduction) and spread. Maintain appropriate fire regimes. (Consult CapeNature or a specialist for advice, or refer to publications such as Esler et al., 2014 for more detailed guidance). Maintain surface and underground hydrological systems and wetland habitats in a healthy, undisturbed state. Avoid fragmentation of alluvium fynbos habitats. Small remnants (<100 ha) are likely to suffer losses of pollinators, changes in fire frequency and edge effects that encourage invasion by alien plants. Monitor populations of Red List species (both threatened species and others of conservation concern) and ensure that viable populations of such species are not lost to any kind of land-use activity. Maintain and monitor biocontrol 'reserves' (for controlling Hakea and invasive Acacia species). <p>What are the best spatial approaches (at a landscape scale) to avoid or minimise impacts and risk in these ecosystems?</p> <ul style="list-style-type: none"> Nodal development footprints are preferable to linear or diffuse ones, as nodal patterns allow for managed burning of fynbos and better accommodate wildfires. In general, housing infrastructure is not compatible with conserving fynbos or any other fire-prone vegetation type. However, to minimise the impacts of housing developments in fynbos, buildings should be clustered within a fire-free zone and protected with an appropriate firebelt. Flammable building materials such as thatch should be avoided. Fire belts must be included within the development footprint and should not be part of the surrounding natural veld. (consult with planners at CapeNature, or the Department of Environmental Affairs and Development Planning who can provide specialist advice). Maintain and restore connectivity within and between highly fragmented lower-lying fynbos types, especially those associated with particular geologies (such as granite, shale and ferricrete fynbos). Maintain rocky outcrops and scree in a natural state to provide good stepping-stones and a high degree of connectivity between larger remnants of unmodified vegetation, and across edaphic and other vegetation boundaries. Preserve the upslope habitats in representative spur, riparian and flat-slope environments. These habitats are usually orientated parallel to the contours (with the exception of riparian and spur communities). Avoid land-use activities that fragment existing ecological corridors (e.g. riparian vegetation) and interfaces between different soil and vegetation types. These corridors and boundaries may be important for the long-term viability of small conservation areas, or for the maintenance of large-scale ecological and evolutionary processes in response to environmental change. Do not modify seeps and marshes – avoid and strongly discourage the establishment of 4x4 tracks, trails, roads, dams and any other infrastructure in these habitats. Do not convert sandy flats and perched sand valleys to protea orchards and keep roads and paths out of these areas. Locate orchards of cultivated indigenous species (such as proteas, buchu and honey bush tea) and their cultivars more than 2 km away from sites where related species occur naturally (this is to prevent hybridisation). Mountain peaks should not be used to erect telecommunication masts or other fixed infrastructure, including 4x4 tracks and any other roads. Hiking trail paths need to be carefully laid out and regularly maintained, 		

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>especially for erosion. Calcium-based concrete must not be used in the construction of such paths.</p> <p>Critical Things To Maintain:</p> <ul style="list-style-type: none"> • Maintain appropriate fire cycles and manage fires correctly. The natural fire season is during the hot dry season (i.e. summer or early autumn). In granite, ferricrete, conglomerate and silcrete fynbos, hot burns are required to prevent over-dominance of weedy elements such as renosterbos (<i>Elytropappus rhinocerotis</i>) and <i>Cliffortia</i> spp. Hot-burning fires also allow recovery of the large-seeded, early seral species (i.e. those that appear earlier in the ecological succession sequence), which are prominent in these plant communities. • Maintain appropriate grazing regimes in grassy fynbos to retain maximum species richness in these plant communities. • Retain local-scale variations in habitat in sandstone fynbos. These ecosystems include many local variants (which may not be captured on maps) which need to be considered – and preferably maintained – when assessing the impacts of a proposed land-use activity. Habitats that require specific attention include high altitude and perched seeps and marshes, and sandy flats and perched sandy valleys (especially the lower reaches) which often contain significant wetland habitats. • Maintain buffer zones between drainage ditches and remnant patches of natural habitat. Subterranean and surface water movement is often altered by agricultural drainage, water abstraction, channelization and dams. This can result in the drying up of seasonally wet areas, even if they have not been directly modified. • Monitor seeps and marshes to detect changes where surface water or groundwater is abstracted. • Prevent sedimentation and erosion into alluvium fynbos habitat from agricultural lands. • Remove invasive alien species correctly (obtain advice from CapeNature or Working for Water). • Do not allow flowers, seeds or plants to be harvested in nature reserves. • Monitor and mitigate hybridisation from protea orchards. • Keep development footprints as small as possible to minimise the spread of invasive Argentine Ants and manage rubbish disposal carefully. • Maintain and maximise patch connectivity to allow for movement of pollinators. To be functionally viable, larger patches should be located within 500 m of each other and must be connected by pollinator-friendly terrain. Where possible, patches should be linked upslope to mountain fynbos along drainage lines; such corridors should be at least 300 m wide to maintain a natural fire regime. These linkages also help prevent groundwater from being polluted by fertilizers and pesticides. 		
<p>Source funding for long-term climate change research projects.</p> <p>Distinguishing local climate trends is essential as climate may not alter uniformly across large areas. Climate change alters the movement of bees which in turn could negatively impact the pollination process In George Municipality. Changing rainfall patterns impacts on the germination of seedlings. A research gap exists with regards to firm scientific monitoring and the evaluation of the impact thereof.</p> <p>Opportunities for innovation exists for the development of value-adding businesses e.g. George Municipality is well placed for renewable energy generation and its ability to cope will be improved if it embraces the move to renewable energy generation, green building technologies and improved water management.</p>	<p>George Municipality Consultant DEA&DP</p>	<p>Funding ringfenced for long-term climate change research projects.</p>
<p>Management of Wetlands</p> <ul style="list-style-type: none"> • Wetlands must first be identified and delineated in order to be conserved. It is best to identify wetlands in the winter months, as some seasonal wetland areas may not be easily recognised in the dry summer months. • Keep buffer areas of undeveloped land that are free of alien plants around wetlands. Where there is no buffer at all between the vineyard and the wetland, or where part of the vineyard impinges on the wetland, 	<p>George Municipality CapeNature SANS Park DoA</p>	

DRR PLAN DESCRIPTION	RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
<p>it is advisable to withdraw the vineyards from the wetland when replanting takes place and to include an adequate buffer area, where possible. The buffer width will be determined by the size, type of wetland, functionality of wetland and the impacts of adjacent land use.</p> <ul style="list-style-type: none"> • The source and downstream portions of the wetland should not be separated. The source is the water flowing into the wetland. Most of the water in a wetland comes from the catchment surrounding the wetland. Therefore, wetlands are strongly influenced by activities in the surrounding catchment even when these areas are distant from the wetland. When assessing the impacts of off-site land uses on wetlands, one needs to look at how the land uses change the quality and quantity of water entering the wetland and how this, in turn, affects the functioning and benefits of the wetland. Digging a drainage channel above the wetland or building a road through the wetland are examples of separating the source from the downstream portions of the wetland. • All activities in the catchment have an effect on wetlands (e.g. hardening in the catchments by roads or paved areas will lead to higher run-off and the possible erosion of wetlands). • Make sure that there is no over-abstraction of surface or ground water feeding into a wetland as this can cause the wetland to dry up. No high-yield boreholes should be sunk near natural wetlands. • The 'damming' of wetlands will change seasonal wetlands into permanent water bodies and the special habitat formed by the wetland will be lost. The building of dams requires authorization from the Department of Water and Sanitation (DWS). • Check for any pollution sources that could have an impact on water quality such as seepage from manure and compost heaps, domestic waste sites or areas where wine skins are stored. Consider adding water-effluent quality checks to your annual drinking and irrigation water-quality sampling procedure. Sample at a spot close to where your farm effluent joins another water source (e.g. drainage canal). Knowing the state of your water quality allows for informed adjustment of practices and it can be used as proof to safeguard you against any water pollution accusations. • Wetlands often suffer from high levels of alien invasive plants. Alien plants use large quantities of water and can cause wetlands to dry out. Note: Always use 'manual' methods, such as machetes or chainsaws (i.e. no machinery) to clear alien plants in wetlands because wetlands are very sensitive to soil disturbance. Chemical treatment should be scheduled for the drier summer months. • It is illegal to interfere with the flow regime of water through a wetland by canalising water flow, digging drainage ditches or infilling by dumping soil and rubble, except where the necessary authorisation has been obtained (e.g. to build a dam in a wetland). Wetland functioning can sometimes be successfully restored when the flow regime is reverted to its original state and ditches or canals are closed. • Wetlands can be utilised for grazing, provided the grazing pressure is not too high, takes place in the correct season (usually summer) and livestock are kept away from the deeper, wetter areas, with unstable soil. Monitoring wetlands for signs of degradation and erosion by overgrazing is important. 		
<p>Formulation and implementation of a Coastal Management Plan</p> <p>What are the critical things to maintain:</p> <ul style="list-style-type: none"> • Maintain pathways for natural dune migrations, including seasonal cycles of sediment deposition (summer) and erosion (winter), by: <ul style="list-style-type: none"> - avoiding the construction of any infrastructure that may impede or obstruct the natural mobility of dune systems. - maintaining unimpeded sand mobility corridors (including headland-bypass dunes). - restoring sand migration pathways that are infested with invasive species such as rooikrans. 	<p>George Municipality Consultant DEA&DP</p>	

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
	<ul style="list-style-type: none"> - Maintain indigenous vegetation structure and successional dynamics (including that of the primary and foredunes, and in dune slacks). • Retain a functional corridor of intact indigenous vegetation along the coast to link inland-trending river systems. This is crucial for facilitating the migration and dispersal of plants and fauna. • Maintain decomposition processes at the high-water mark and on the backshore by prohibiting the removal of drift kelp and other organic material, except at popular bathing beaches. • Minimise disturbance at the breeding, feeding and roosting sites of shore birds by people and dogs. <p>Prevent encroachment by property owners who illegally extend their properties into sensitive coastal dune habitat.</p> <p>What indicators should be used to assess and monitor ecosystem health:</p> <ul style="list-style-type: none"> • The type of monitoring and number of indicators required will depend upon the nature of the proposed land use and the characteristics of the particular beach. Either baseline conditions will need to be determined as part of the assessment, or a reference beach should be used to indicate desirable benchmarks for each appropriate indicator, as determined by a coastal expert. The types of indicators should include, though may not be limited to: <ul style="list-style-type: none"> - Shoreline profiles (long-shore and cross-shore profiles) and beach width. - Sediment grain size (the extent to which this resembles the natural grain size at any particular location along the coast, when compared to relevant benchmarks). - Species composition and abundance of intertidal beach macrofauna (to be assessed by a specialist, with any loss of species or reduction in abundance taken as an indicator of declining ecosystem health). - Species composition and abundance of shore birds, as assessed by a specialist. - Breeding success (measured as number of hatchlings fledged per annum) of shore birds. - Density and extent of indigenous and alien dune vegetation cover, with a low density of invasive alien vegetation indicative of healthy ecosystems. 		
Soil Erosion/Desertification			
Physical Planning	<p>Improve land-use practices</p> <p>Promote and facilitate the change from conventional agriculture to conservation agriculture, in order to restore soil microbial activities, retain moisture and prevent erosion.</p> <p>Prevent vehicle-off-roading.</p> <p>Monitor overgrazing.</p> <p>Monitor urban sprawl and commercial development.</p> <p>Provide a planning and design service to farmers to prevent the pollution of soil and water resources.</p> <p>Provide a planning and design service to land owners to prevent river bank erosion or restore river banks already eroded during floods.</p> <p>With regards to biodiversity and agriculture, the following factors apply:</p> <ul style="list-style-type: none"> - Lower impact practices; - Lower than standard stocking rates; - Rotational grazing; - Wetland & river bank protection to avoid overgrazing, trampling and destabilization; - Avoid areas containing red data species; - Limit “value adding” to nature-based tourism; 	<p>George Municipality</p> <p>DoA</p> <p>Farming Associations</p>	<p>High-risk areas identified and sustainable land-use practises initiated</p> <p>Proper gravel roads are developed in high-risk areas. Riparian zones are rehabilitated with indigenous riparian plants</p> <p>Overgrazing is monitored</p>
Social	<p>Improve grazing and cropping systems</p> <p>Surface cover is a major factor to control erosion because it reduces the impact of raindrops falling on bare soils and wind removing soil practices. It also reduces the speed of water flowing over land.</p>	<p>DoA</p> <p>Farming Associations</p>	<p>Soil cover on farm is improved</p>

DRR PLAN DESCRIPTION		RESPONSIBLE AGENCIES	PERFORMANCE INDICATORS
Engineering	Delineate riparian zones according to DWS Policy A buffer zone of at least 30m should be created between agricultural lands and rivers. Priorities for conservation of biodiversity within should be identified, reference could be made to SDF.	George Municipality	Buffer zone of at least 30m created between agricultural lands and rivers

4.3.20.9 Risk Mitigation Project Teams

Project teams will be convened to address specific risk-mitigation issues during the risk reduction and preparedness phase or post-disaster recovery and rehabilitation phase. The team will determine its terms of reference and deliverables in consultation with the Disaster Management Committee (DMC), and will be responsible to plan, manage and complete multi-disciplinary projects.

In the recovery and rehabilitation phase, these project teams will take over responsibility once the JOC is demobilized and/or in cases where recovery and rehabilitation takes place over extended periods.

A project team under a line function of the Municipality, can be convened to take responsibility for activities that address the causal factors of a disaster/incident. Such teams will receive a brief from and report back to the Disaster Manager, and work in close co-operation with the Disaster Management Committee.

Disaster response is the total actions taken by residents and institutions in the time of a disaster. These actions commence with the warning of an oncoming threatening event, or the event itself, if it occurs without warning.

Disaster response includes the implementation of disaster preparedness/contingency plans and procedures, thus overlapping with disaster preparedness.

All resources available, contact details and the various role-players will be listed in the contingency plans for each risk identified. In case of an incident/ emergency or disaster, the following the steps will apply.

Table 44: Response Procedure

4.3.21 Economic Development Strategy

The economic development strategy of the George municipality intends to establish an integrated municipal approach to the identification of economic, social, and ecological risks to, and opportunities for, growth and development in George. It is a resilient, long term integrated and supportive roadmap(vision) that guides sustainable economic growth and development. George needs an economic strategy to rise to the challenges facing the municipality and its communities over the next 20 years and beyond.

According to Growth Potential Study (GPS) of the Western Cape Provincial Government George has been classified as one of six municipalities with a very high development potential in the Western Cape. It is Important to note that the GPS is serving as a support tool to inform strategic objectives, policy making and spatially targeted investment. It furthermore strengthens allocative decisions for integrated management, service delivery and spatial alignment within the Provincial and Municipal spheres of government in the Western Cape. George's main economic drivers and job creators are in the Tertiary sector, namely the Finance, Insurance, Real Estate and Business Services, followed by Wholesale, Retail, Catering and Accommodation and then Manufacturing in the Secondary Sector.

George has an advanced services sector infrastructure with banks, conference facilities, business, major shopping chains, transport and sporting facilities, yet retaining its small town and country atmosphere of peace and tranquillity.

4.3.21.1 George Composite Growth Potential

George overall composite growth potential Score 100 regressed from 88 to 86. The Municipality slightly regressed in the overall development potential with gains made particularly in the Economic and Physical themes. Regression is evident in the Human Capital and Infrastructure theme. (insert figure 21 of the GPS) The overall economic them Score 100 for George increased by 11 from 89 (GPS13) to 100 (GPS18). The Z-Score increased from 1.52 to 2.01 standard deviations above the mean, i.e. above average performance. In terms of the Economic theme Score 100 George is ranked best performer of 24 Municipalities.

The economic environment is very important in the context of development and the management of scarce resources. Sustainable economic growth is a key focus of the municipality, which is enshrined in the integrated development plan. In preparing the economic development strategy the municipality has worked with business and communities to devise a plan that it thinks will best address the needs of the town.

The key issues that the municipality faces in terms of planning are as follows:

- There is limited developable land available for residential development within the city;
- The need to provide affordable housing to middle income families;
- The increase in migration from the Eastern Cape, Gauteng and the Free State will result in an increase in the need for infrastructure;
- Increase in the population will result in an increase in the need for jobs

The economic analysis shows that the priority factors are Agriculture with an emphasis on agri-processing, wholesale and retail, the digital economy, financial and business services sector, tourism and manufacturing. The economic development strategy pinpoints specific steps for the city, its partners and stakeholders to take and implement. The following economic strategy initiatives are planned:

- Repositioning of the Department of Human Settlements, Planning and Development;
- A Cost -of doing business analysis;
- A review and improvement of all by-laws;
- Identify land with development and redevelopment potential;
- Develop and implement an institutional data repository
- Permit and Approval Review;
- Review the current Tourism Model; and
- Develop and implement an affective business attraction, retention and expansion strategy

4.3.21.2 Agriculture

Chapter 6 of the National Development Plan (NDP) envisions an integrated and inclusive economy that involves the expansion of agricultural activity, the need for effective land reform and the promotion of sustainable rural development. This industry sector contributed around 3.1% to the George GDP in 2019, and although the effects of the COVID-19 pandemic seem minimal at this stage, the longer-term drought and water shortages that was experienced, already placed this industry under stress last year and earlier this year. The Russian/Ukraine conflict is expected to have negative effects on the supply and prices of oil and other farming inputs such as fertilizer. Sector growth remains threatened by other factors such as loadshedding and the political environment. There is however room for improvement and growth, particularly in the South Cape region and George with the existing production of avocado and the fruit and vegetable market as well as macadamia nuts that can steady production.

Food production and processing remains essential products and services, and international agents are already looking into possibilities for export opportunities to other parts of the world affected by Covid-19. Exports and transport of cargo (produce) have not been limited,.

George is one of the first municipalities in the country to establish an Agriculture section in the Local Economic Development Department. This initiative is in line with the strategic focus areas of the Western Cape Department of Agriculture.

The municipality play a very important role in assisting the Sector in five areas namely:

- **Structured Education and training:** This entails the facilitation and engagement with agricultural related training needs within communities
- **Farmer Support:** This entails the management of commonages and associated natural resources in support of sustainable food security interventions for communities and settlements within municipalities

- **Market Access:** This focus area focuses on infrastructure development that supports agriculture development value chain and market access
- **Rural Safety:** The development of District and Local Rural Safety Plans for structured engagements around rural safety and pertinent matters.
- **Climate Change:** The provision of water security and the prioritisation of water harvesting technologies to enable water access for food production purposes.

The George Municipality has identified Agriculture as a strategic sector within the broader George Economy. The reason for this focus is that Agriculture provides economic equity and helps people to prosper. More than 8000 people are working in the Agriculture Sector in the George Municipal area and thus the sector is a major source of employment in the region.

Agriculture impacts global trade because it's tied to other sectors of the economy, supporting job creation and encouraging economic development. Cities with strong agricultural sectors experience employment growth in other sectors, according to the Western Cape Department of Agriculture. Cities with agricultural productivity growth and robust agriculture infrastructure also have higher per capita incomes, since producers in these cities innovate through technology and farm management practices to boost agricultural productivity and profitability. The berry industry in George is a typical example of an industry that is growing, and its export capacity has also grown tremendously. George Municipality is playing a key role in ensuring the long-term success of the sector through various programmes and interventions. To this end, the municipality is working with the Western Cape Department of Agriculture and other institutions such as Partners in Agri Land Solutions (PALS) to create an enabling environment to implement projects and inclusive agricultural growth.

4.3.21.3 Tourism

The Tourism sector is showing some signs of recovery after the COVID-19 close down. A larger number of smaller members were already in survival mode before COVID-19 and some are still struggling as a result of the pandemic. However, the average occupancy for the November 2022 to February 2023 period were around 80% in the region which is a good sign of pre-covid figures.

Indications however are that the typical tourist may only be willing to travel again (overseas especially) from January 2023 and that occupancy will improve towards June 2023. Smaller operators and some airlines also did not make it through the down slump, leading to higher flight and transport costs with fewer competitors in the mix. The Russian- Ukrainian conflict is also putting pressure on higher fuel prices, and the floods in KwaZulu-Natal lead to shortages of fuel at OR Tambo, with several flights cancelled or delayed. This could be partially offset against the exchange rates again.

The industry critical success factors include inclusive business participation, skills and capacity building, involvement of the civic community and investment in meaningful partnerships. Indications from local hotels and restaurants are that the internationals are certainly back, and this was evident during the festive season. The first quarter of 2023 is certainly looking promising and it is envisage that June/July 2023 period will be very busy given the Craven Week High Schools tournament and the centenary festivities of the Outeniqua High School.

4.3.22 ICT Strategy

The strategic enabler of organisational change and service delivery in the public sector is information and communication technology (ICT) Systems and Services. At the corporate governance level, there is also a growing recognition that IT services and systems are a crucial component of the value chain for municipal service delivery.

Major challenges are placed on the Department's ICT and its resources by the ongoing alignment of ICT services and systems with the strategic aims and objectives of the municipality as well as by declarations of direction from the National Government and the Western Cape Provincial Government.

In order to guarantee alignment with the Municipality's strategy, this document strives to articulate and describe changes in the Municipality's IT Strategy. In order to address the ICT-related needs of the municipality and management, special attention is paid to recognising the new requirements and opportunities for information and communication technology.

Many crucial enabling resources, including as money, people, and information technology, must be handled skilfully to support the IDP if the municipality is to successfully implement its IDP and accomplish its strategic goals.

Many information technology services, without which the municipality's core and supporting operations could not function, are indirectly necessary for the attainment of the strategic objectives of the IDP for the municipality. Among the essential ICT-related services are:

- Provisioning of the Municipal Financial Management and Payroll Management software applications;
- Disaster Recovery Management;
- Municipal Web-site hosting;
- E-mail and internet services;
- Data storage;
- End-user support for the ICT environment
- Data recovery;
- ICT planning;
- Provisioning of network, wireless networks and telephony services;
- ICT Risk Management;
- ICT Contract Management;
- Public Wi-Fi; and
- Business Continuity

4.3.23 Community Development

Community Development includes the development and implementation of effective community-based projects and programmes that address social needs within the broader George and its surrounding areas, including the Uniondale and Haarlem area. Developing and implementing effective community-based projects and programs, focussing on children and vulnerable adults, that address social needs. The municipality utilised stakeholders within the municipal bonds to assist with the implementation of its objectives such as:

- Project Hope (People living on the street);
- ECD's;
- Disaster assistance;
- Nutritional centre's;
- Aftercare Skills development;
- Pauper burials investigations; and
- LDAC

The Municipality in conjunction with the Project Hope (People living on the streets), the programme a Programme aimed at addressing the community challenges that people living on the street face daily. This programme entails:

- Acquisition of identity documents
- Reunification services
- Provision of necessities such as toiletries and clothing
- Typing of CV's and distributing it to local businesses.
- Women's Day function for women living on the street
- Regular information sessions with regards to community challenges.

Thus far 37 persons received identity documents, 22 persons were successfully reunified with their families, 15 persons gained accommodation, 31 persons received employment opportunities and 10 persons received accredited computer training.

However, in stark contrast to the success achieved with community development there has also been challenges which the municipality implemented actions to mitigate these challenges. There has been a shortage of staff however the municipality utilised its EPWP appointment process to assist with addressing the staff shortages as well as having a shortage of transport which was mitigated through hiring of vehicles.

The municipality continued its drive-in relation to service delivery to the community through the following initiatives:

Table 48: Community Development Initiative

Service	Initiative
Soup kitchens established or supported	116 established soup kitchens the number decreased due to increase of food prices and the passing on of cooks
Initiatives to increase awareness on child abuse	When schools give permission to enter the schools, aftercare programmes taking place at 2 schools. Awareness sessions continue at pre-schools and primary school.
Youngsters educated and empowered	The information for Opportunities for the Youth continues through Community media and Info at Area Offices Outreach expo's been held throughout the year to inform the youngster, about opportunities to further studies etc.
Initiatives to increase awareness on disability and Gender/ Women empowerment	Support groups been formed to raise awareness on Gender and Disability empowerment. Information and Awareness regarding GBV, Gender and Disabilities been communicating through Community media, and the G & D forums
Initiatives to increase awareness on HIV/AIDS	In conjunction with different stakeholders the following programmes continue in the community: Education and Awareness Support groups (HCH, CRC) OVC programmes (Orphanage Vulnerable children) SHE programmes (Community Health Empowerment)
Initiatives to increase awareness on substance abuse and high drug and alcohol related crimes	Trainings take place in conjunction with SAHARA Awareness sessions, and referrals, in the communities are ongoing. Anti-drug abuse door to door campaigns took place in Lawaakamp, Maraikamp and Parkdene Life skills Camp also took place with thirty learners from Lancewood Primary. This also aims to make youngsters aware of other alternatives to negative behavior They are capacitated with information that will enable them to make more informed choices with regards to challenges they might face
Special events hosted (World's Aids Day, World Disability Day, Youth Day, 16 Days of activism against women abuse), Khomanani day	Human Rights Day take place in a form of a PRIDE parade. International candlelight day was commemorated in conjunction with, Dept of health, and different stakeholders at Hospital International Nurses Day been held at the Blanco community World Aids Day take place in Touwsrante. Disability day been host in conjunction with Emmaus, sport day Khomanani day – women support group was Launched.
Vegetable gardens established	Seven (7) community food gardens with the aim to provide fresh produce to creches and soup kitchens. These gardens are in the following areas: <ul style="list-style-type: none"> Touwsrante - 2 Borchards -2 New Dawn Park – 1 Andersonville – 1 Kleinkrantz – 1 Currently two new community gardens are, established in Rosedale

Community development has been sub-divided into five (5) areas namely:

1. Gender / Disability Development;
2. Youth Development;
3. HIV –Aids;

4. Community Projects (ECD, Hope, Pauper burials, Disasters, Soup kitchens); and
5. Community Food Gardens and Special programs (LGBTQI+ helpdesk)

4.3.23.1 Gender and Disability

To mainstream Gender and Disabilities and include Persons with Disabilities into developmental programmes. The Developmental Plan integrates disability components into budget, programmes, policies and strategies

- Awareness (Events)
- Skills development

4.3.23.2 Youth Development

To facilitate and co-ordinate the strengthening of Youth Issues within George in order to have empowered young people who are able to realise their full potential in order to make a meaningful contribution to the development of South Africa.

- Awareness (Events);
- Job readiness;
- Career expo's;
- Online applications;
- Gardens; and
- Jobseekers

4.3.23.3 Thusong Centres

Thusong Service Centres are one-stop, integrated community development centers, with community participation and services relevant to people's needs. Based on the Batho Pele Principles, these centres aim to empower the poor and disadvantaged through access to information, services and resources from government, non – governmental organizations, parastatals, business, etc.

The objectives of the Thusong Service Centre are:

- To bring government information and services closer to the people
- To promote access to opportunities as a basis for improved livelihoods
- To promote cost -effective, integrated, efficient and sustainable service provision to better serve the needs of citizens
- To build sustainable partnerships with government, business, and civil society
- To create a platform for greater dialogue between citizens and the three spheres of government.

The Thusong Centre model revolves around a Six-Block service model i.e. Government, Social and Administrative Services, Office Services, Education and Skills Development Services, Local Economic Development (LED) Services, Business Services and Communication opportunities and Information and Communication activities.

The Department of Local Government officially held a site-visit at the Rosemore and Pacaltsdorp areas to look for a suitable site to

establish a Satellite Thusong Centre. Pacaltsdorp was identified as the most suitable area, because of the existing building which was being used by the Post Office. The community inputs at the IDP meetings in Pacaltsdorp expressed the need for a Thusong Centre in their area, to bring services closer to the people instead of them having to travel to town.

At the Provincial Thusong Provincial Forum meeting in Saldanha Bay on the 28 February -1 March 2023, funding was approved for a satellite Thusong Centre in George and the establishment of a Pacaltsdorp Satellite Thusong Centre would be funded by R150 000.00 as a Provincial Grant.

4.3.23.4 Libraries

The municipality has 11 libraries, located in Avontuur, Blanco , Conville, George , Haarlem, Noll, Pacaltsdorp, Thembaletu, Tousranten (new library being constructed), Uniondale, Waboomskraal. Uniondale is one of the oldest library.

The Department of Environmental Affairs has indicated to Provincial Library Service of a programme that they will be rolling out in the Western Cape. The aim of this programme is to make the public aware and to educate them with regards to environmental governance.

Thembaletu Library is the only library in George that was selected / indicated for this programme. This library received a huge white shelf that stands at a very prominent space, at the entrance, of the library. It is clear and visible for any member of the public as they enter the library. The shelf contains numerous pamphlets, brochures and information and educational material for the public (to make use of). The National Environmental Management Act states the need to promote active participation of communities in environmental governance, and to develop skills and capacity necessary for achieving equitable and effective participation with regards to environmental issues.

This Programme emphasises the need for environmental education and awareness, as well as the sharing of knowledge and experiences, and the recognition of indigenous knowledge from communities and their leaders.

Active participation by all South African citizens in environmental management can be achieved only if the citizens are equipped with relevant information to acquire knowledge and make informed decisions.

The National Development Plan promotes active citizenry whereby citizens need to be involved in their own development and strengthening by means of inter alia Youth Service Programmes through community-based development programmes.

This programme is in line with imperatives of the National Youth Policy namely, social cohesion and nation building, economic participation and social transformation. The DEA's approach for this programme is alignment and integration into the provincial government youth development programmes to avoid duplication of programmes and deviation from provincial government priorities.

The degradation of our natural resources impacts negatively in our economy and exacerbates poverty etc.

Thus, the urgent need for robust implementation of public education and awareness programmes promoting protection, conservation and sustainable use of natural resources.

The latest initiative is the **YearBeyond, or YeBo**, is a Youth Service partnership between the Western Cape Government, The Community Chest of the Western Cape, the Michael and Susan Dell Foundation and numerous NGOs. It aims to provide 18 to 25 year-olds with a meaningful first work experience and a pathway to further studies or work while at the same time encouraging a culture of active citizenship and volunteerism.

The aim of this programme is to:

- invest in the personal and professional development of the youth;
- offer them support to transition into the world of work.

George Libraries formed part of this initiative last year (2022) and we already applied for Yeboneers for George Libraries for 2023. Last year 57 youngsters were allocated to us as George Libraries.

4.3.24 Workplace Skills Plan

In terms of the Skills Development Act, a SETA is obliged to among other activities:

- Research and develop a Sector Skills Plan
- Receive and evaluate Workplace Skills Plans and Annual Training reports/ Implementation Reports from employers
- Identify and develop strategic projects arising from skills needs within the sector, funded by discretionary grants
- To register, train and support Skills Development Facilitators within the sector

To enable the development of the Sector Skills Plan, the municipality is required to formulate Workplace Skills Plan. Workplace skills plans (WSP) documents the skills needs in an organisation and describes the range of skills development interventions that an organisation will use to address these needs. A WSP is developed annually – for the period 01 April to 31 March - by a registered skills development facilitator (SDF) and is submitted to the SETA with which the organisation is registered, in this case the LGWSETA. The WSP facilitates access to the SETAs mandatory grant for skills training. Organisations are required to report against their WSPs in an Annual Training Report (ATR) that shows how they have addressed the priority skills defined in the WSP. An equally important purpose of the WSP is that it also provides important sector information to the SETA on employee profiles, skills needs and skills development interventions. This information in turn informs the development of the SETAs sector skills plan (SSP). The SSPs then further make a contribution to the national skills development agenda defined in the National Skills Development Strategy, now in its 3rd generation. Though developed at an organisation level to address in house skills development needs, the WSP has an important purpose in informing skills needs at a sector level and at a national level.

In terms of the Skills Development Levies Act employers, including municipalities, are obliged to register with the SA Revenue Services and pay 1 % of the monthly pay roll as skills levy. Upon the submission and approval of the Workplace Skills Plan and the Annual Training/Implementation Report by the municipality to the LGSETA, the municipality becomes eligible for both the mandatory training grant, and the discretionary training grant from the LGSETA.

CHAPTER 5: Spatial Development Framework

5.1 The Purpose of the Spatial Development Framework

The purpose of the Municipal Spatial Development Framework (MSDF) is to interpret and represent the spatial development vision of the municipality.

The Spatial Development Framework (SDF) forms part of the spatial planning system of the Republic of South Africa and gives strategic guidance, development principles, norms and standards to guide spatial planning, land use management and land development.

In terms of Sect 12 (5) of the Spatial Planning and Land Use Management Act, 2013 (Act 16 of 2013) (SPLUMA) the MSDF must assist in integrating, coordinating, aligning and expressing policies and plans emanating from various sectors of the spheres of government as they apply in the municipal area. The MSDF abides by the development principles of SPLUMA and aims to address spatial imbalances and promote sustainability and resilience. Long-term risks related to spatial patterns of growth and development are identified and mitigated through policies and strategies.

The MSDF is a written and spatial presentation of a five-year spatial development plan for the spatial form of George and includes a longer-term spatial vision statement for the municipal area indicating the desired growth and development pattern for the next 10 to 20 years. The MSDF provides the spatial vision and seeks to guide the spatial development context of the municipality to enable growth absorption, address spatial imbalances, facilitate economic growth, promote social cohesion and protect the natural environment. The MSDF seeks to guide planning and development decisions across all sectors of government and specifically the municipality in its spatial planning and land use management decisions. Spatial strategies and policies are formulated to advise the evaluation of land use proposals and to promote specific outcomes. Information in the MSDF is provided to the public and private sector in a clear and accessible manner to provide direction for investment purposes: Promoting a rational and predictable land development environment to create trust and stimulate investment.

The MSDF provides direction for strategic developments and infrastructure investment that promotes efficient, sustainable and planned investments by all sectors and indicates priority areas where investment should be focused as a catalyst for development which supports the achievement of spatial objectives. The MSDF assists with the integration, coordination, alignment and expression of development policies and plans emanating from the various sectors of the spheres of government.

The MSDF is the foundation of the Capital Expenditure Framework (CEF) and creates the spatial basis through which specific arrangements are outlined to prioritise, mobilise, sequence and implement public- and private infrastructural and land development investment in the priority spatial structuring areas identified. (SPLUMA, 2013). Spatial considerations translate into projects executed through the IDP and SDBIP and implemented by various functional Departments.

5.2 The focus of the MSDFs

The MSDF is informed by three main strategic spatial development approaches to directing and managing development in the Greater George Area and the George City Area:

- I. **Consolidate: Making what we have work better for our people**

- II. **Strengthen: Build on George's foundations for growth and resilience**
- III. **Smart Growth: Invest in catalysts for social and economic prosperity.**

This planning approach informs the spatial strategies and policies (Table 14, Draft MSDF2023) and related Policy Guidelines ((Table 14, Draft MSDF2023) contained in the MSDF (Par 4.5). Current and future significant structuring and re-structuring elements of the spatial form of George, including development corridors, activity spines, economic nodes and other elements (See Par. 4.4) are harnessed to facilitate considered growth and to provide guidance to investment priorities and potential interventions.

MSDF also directs the land use management system to ensure that the desired impact and structure of the land use management scheme is aligned with the strategic objective of the IDP and is applied throughout the municipal area.

5.3 The relationship between the MSDF and IDP

The MSDF is a high-level, core component of the Integrated Development Plan (IDP) and contributes to the realization of the Vision, Goals and Objectives of the IDP by guiding the spatial distribution of current and future land uses within the municipal area of George. The MSDF must facilitate (provide space for) the implementation of the priorities identified in the five-year Integrated Development Plan (IDP) and must also guide the general land use configuration over a longer planning horizon (10 to 20 years), whilst guarding against land speculation.

The IDP drives budget prioritisation and allocation decisions in terms of a rolling five-year development plan, and the Capital Expenditure Framework (CEF).

The MSDF is the spatial expression of the IDP and expressed community needs, while at the same time, the MSDF couches the IDP within a long-term spatial vision for the municipal area that seeks to implement the spatial vision, principles and policy directives set out in national and provincial legislation, strategies, policies and plan.

5.4 The Legislative Framework of Municipal SDFs

The Status Quo Report, which informed the compilation of the MSDF, lists 23 national and provincial policy directives, including:

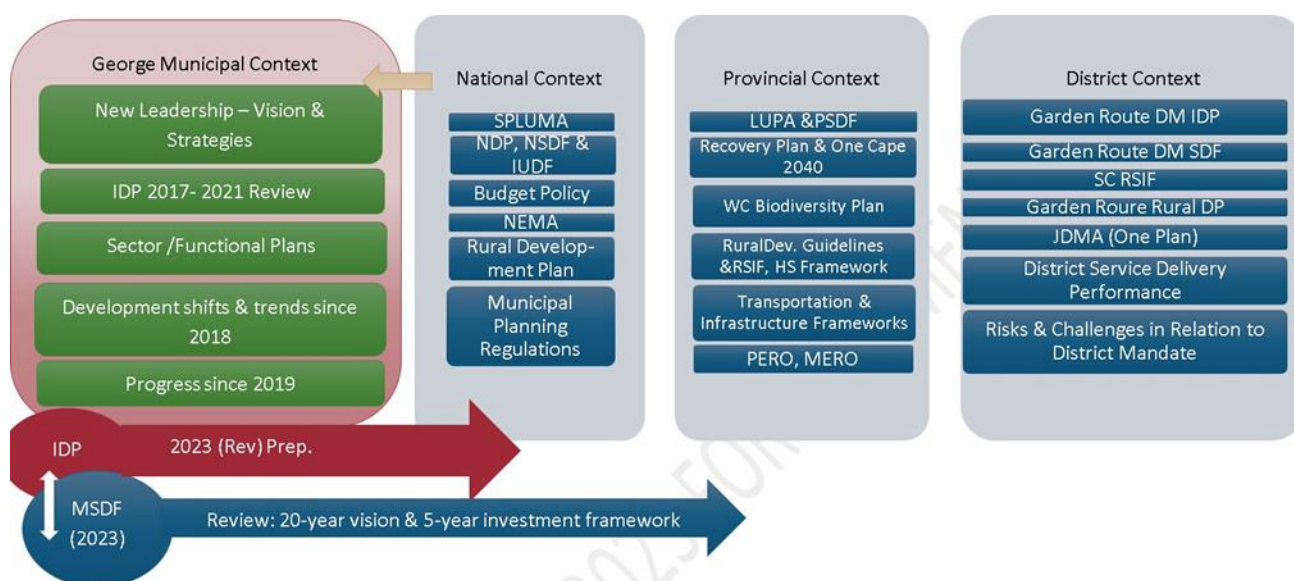

- The Constitution of the Republic of South Africa, 1996: The developmental duty of the local authority includes structuring and managing its administration, and budgeting and planning processes to give priority to the basic needs of the community, and to promote the social and economic development of the community; and to participate in national and provincial development programmes. The key message is to serve the people and that planning must be joint, integrated and aligned; and express all spheres of government development plans and programmes within the municipal space.
- Municipal Systems Act (2000) (MSA): Section 26 of the MSD determines that an IDP is comprised of several core components which includes an MSDF that provides the basic guidelines for a land use management system for the municipality.
- Spatial Planning and Land Use Management Act (SPLUMA) 2013 (Act 16 of 2013): Chapter 4 determines that all spheres of government must prepare Spatial Development Frameworks and Section 20 (Subsection 2) stipulates that
- The MSDF must be prepared as part of the Municipality's IDP. The MSDF must satisfy criteria that addresses compliance with the development standards and norms as set out in SPLUMA (Section 21). The status of the SDF is elevated to a decision-making tool to ensure that land development decisions abide by the spatial structuring objectives of the IDP and MSDF (Section 22).

- Western Cape Land Use Planning Act, 2014 Act 3 of 2014 (LUPA). Chapter 10 of the LUPA expands on the criteria and requirements of a credible SDF and ensures that the process followed is well aligned with sound administrative justice.

In addition to the policy framework at the national and provincial levels, that links to the requirement for the compilation of the MSDF, the related clause of the George Land Use Planning By-Law (LUPB), 2015 applies. The LUPB is a regulatory tool that guides municipal planning and planning processes. Chapter 2 of the George LUPB prescribes the process and participation and decision-making bodies that need to be established over the course of drafting and approving an MSDF.

The MSDF seeks to integrate policy- and legislative directives from National, Provincial, District and Municipal authorities as far as it impacts the spatial development structure of George. Including the following main informants

Figure 51: Legislative Framework of the Municipal MSDF

5.5 George Municipality's work on its MSDF

Table 51: George Municipality's work on its MSDF

Steps Undertaken	Underpinning Legislation	When
1. The Council must decide whether to establish an Intergovernmental Steering Committee (ISC)	LUPA – Section 11 (a) and (b) Municipal Planning Bylaw, Chapter 2, Section 5	On 29 July 2021, the Council resolved to commence with the review and amendment of its 2019 MSDF. In this resolution, the Municipality also decided to establish an intergovernmental steering committee (ISC)
2. Notice of the proposal to compile an SDF must be published in two of the official languages of the province, the most spoken in the area in two newspapers circulating in the area. The notices must indicate: <ul style="list-style-type: none"> The Municipal intention to compile an SDF The process to be followed for the compilation of the SDF 	Relevant Bylaw on Municipal Planning Chapter 2 Section 3 (2)(a)(i)(ii) SPLUMA –Section 20 (3) (a) MSA Regulations, 2001 – Chapter 2 Section 4(a)	Public Notice Number 010/2021 was placed between 30 August 2021 and 30 September 2021 on municipal notices. It is noted that this public notice was also published in thegremlin.co.za
3. The municipality must inform the Provincial Minister in writing of the intention to compile the SDF, indicate whether the ISC process will be undertaken and the process to be followed in the compilation.	Relevant Bylaw on Municipal Planning Chapter 2 Section	Letter received and dated 30 July 2021, addressed to the Provincial Minister.

Steps Undertaken	Underpinning Legislation	When
	3(2)(b) (i-iii)	
4. Letter received and dated 30 July 2021, addressed to the Provincial Minister.	Letter received and dated 30 July 2021, addressed to the Provincial Minister.	Letter received and dated 30 July 2021, addressed to the Provincial Minister.
5. The municipality must: <ul style="list-style-type: none"> In writing, invite written nominations for representatives to serve on the ISC from the following persons or organs of state: the head of the provincial department responsible for land use planning the head of the provincial department responsible for environmental affairs; and other relevant organs of state. 	Relevant Bylaw on Municipal Planning Chapter 2 Section 5	This was done in a letter dated 6 August 2021, signed by the Director for Planning and Development.
6. The project committee must compile a draft status quo report setting out an assessment of the existing levels of development and development challenges in the municipal area and must submit these to the ISC for comment.	Relevant By-Law on Municipal Planning Chapter 2, Section 6(1)	This was done. Draft Status Quo report and MSDF Review report was presented to the ISC on 18 March 2022.
7. It is noted that this public notice was also published in thegremlin.co.za	Relevant By-Law on Municipal Planning Chapter 2, Section 6(2)	The MSDF Status Quo Report and the MSDF Review Report were tabled and approved by the Council on 29 May 2022
8. After finalizing the status quo report the project committee must compile a first draft of the amendment of the municipal spatial development framework and submit it to the ISC for comment.	Relevant By-Law on Municipal Planning Chapter 2, section 6(3)	A draft version of the MSDF was presented to the ISC on 23 September 2022.
9. After consideration of the comments of the ISC the project committee must finalize the first draft of the amendment of the MSDF and submit it to the Council to approve the publication thereof for public comment in accordance with the process adopted in terms of Section 28 and 29 of the MSA.	Relevant By-Law on Municipal Planning Chapter 2, Section 6(4)	At an ordinary Council meeting on 27 October 2022, the Council supported the publication of the MSDF amendment for comment.
10. The public, the Provincial Minister and the District Municipality must be made aware that any MSDF amendment is also an IDP amendment. Therefore, the request for comment on the proposed MSDF amendment must also include a reference to an IDP amendment. In terms of the MSA Regulations, Chapter 2 Section 3(4)(b), the public should be given a period of at least 21 days to submit their comments on the proposed MSDF amendments. (NB LUPA and SPLUMA require a 60-day comment period as is evident below).	MSA Regulations, Chapter 2 Section 3(4)(b)	This was done – see Notice 051/2022 In Provincial gazette number 8681 of 11 November 2022.
11. Invite the public / local community to submit written comments on this proposed amendment within 60 days of the publication thereof in the Gazette and the Media. (The media means the local newspaper or newspaper(s) of the area determined by the Council as “a newspaper of record”, or by means of radio broadcasts covering the area of the municipality. Such notification must be in the official languages of the area, as determined by the Council). The District Municipality must be consulted regarding the proposed amendment.	SPLUMA – Section 20(3)(b) MSA Chapter 4, Section 21(1) and (2) MSA Regs Chapter 2 Section 3(6)	The 60-day public participation process is being undertaken between 11 November 2022 and 13 January 2023.

Steps Undertaken	Underpinning Legislation	When
12. After consideration of the comments and representations received on the proposed amendment, the project committee must compile a final draft of the amendment of the municipal spatial development framework and submit it to the ISC for comment.	Relevant By-Law on Municipal Planning Chapter 2 section 6(5)	01 April 2023
13. After consideration of the comments of ISC, the project committee must finalize the final draft of the amendment of the municipal spatial development framework and submit it to the Council for adoption.	Relevant By-Law on Municipal Planning Chapter 2 Section 6(6)	01 May 2023
14. Any proposed amendment submitted to Council must be accompanied by a memorandum setting out the reasons for the proposal and must indicate how the amendment is in line with the District Municipality's Framework for Integrated Planning.	MSA Regulations Chapter 2 Section 3(2)	Schedule of amendments with reasons accompanies the MSDF
15. The Council or the project committee may at any time in the process of drafting an amendment to the spatial development framework request comments from the ISC.	Relevant By-Law on Municipal Planning Chapter 2, Section 6(8)	Comments were requested from the ISC during the MSDF amendment stages
16. The Municipal Council must consider all representations received in respect of the proposed MSDF amendment.	SPLUMA, Section 20 (3)(c) MSA Regs Section 3 (4)(b) and 3(6)	31 May 2023
17. If the final draft of the SDF is materially different from what was published, the municipality must follow a further consultation and public participation process before the SDF is adopted by Council.	Relevant Bylaw on Municipal Planning Chapter 2, Sections 6(7), and 7(2)	Advertised concurrently with IDP in April 2023
18. Once adopted by the Council, a notice of this adoption must appear in the media and the Provincial Gazette, within 14 days of the date of adoption.	SPLUMA Section 20(1) Relevant Bylaw on Municipal Planning Chapter 2, Sections 6(9), and 7(3)	Notice published in the Provincial Gazette on 09 June 2023 (notice 8767) and in the George Herald on 08 June 2023. Notices were posted on notice boards and placed on the Municipal webpage and via social media platforms
19. Once adopted, the Municipal Manager must submit a copy of the SDF as a core component of the IDP as adopted by the Council to the MEC for Local Government, within 10 days of the adoption. This submission must include: <ul style="list-style-type: none"> a summary of the public participation process a statement that the process set out in Section 29(1) of the MSA has been complied with a copy of the relevant Districts Framework for Integrated Development Planning (See Section 27 of the MSA) 	MSA Section 32 (1)	Submitted to MEC for Local Government on 02 June 2023
20. The Municipal Manager must also within 10 days of the adoption of the SDF, submit to the Provincial Minister: <ul style="list-style-type: none"> a written notice of the decision to adopt or amend a municipal spatial development framework, the adopted or amended SDF a report setting out the response of the municipality to the comments of the ISC or the Provincial Minister 	LUPA Section 14 (a) – (c)	Submitted to the MEC for Local Government on 02 June 2023

5.6 The Spatial Challenges and Opportunities Identified in the Review of the 2019 MSDF

Table 52: Spatial Challenges and Opportunities

Theme	Spatial Opportunities
Spatial Configuration: Settlement and Population Dispersion	<p>Challenges</p> <ul style="list-style-type: none"> i) Approximately 82% of the population of George resides in the George City area – which is where the greatest growth is projected. ii) Most of the residents of George reside in the central and southern suburbs of the city in a very dense urban environment with a significant component of informal dwellings. Demand for services in the core area is a challenge. iii) The N2 and industrial area form a major barrier between the largest component of the less privileged neighborhoods in the south and better-resourced neighborhoods in the north, northeast and northwest. iv) Economic activity in lower-income areas is not developed to its full potential. <p>Opportunity</p> <ul style="list-style-type: none"> i) There has been a significant uptake of opportunities in estate/security type development, catering for urban-based, affluent residents in developments – an indication of demand for high-income accommodation. ii) A significant uptake in industrial land has been detected points to demand. iii) Social housing opportunities have been identified in the Restructuring Zone. iv) Nodes and intensification zones in all, and specifically, disadvantaged areas have been delineated. v) Catalytic Projects project areas have been identified to facilitate integration- Catalytic projects enabled economic and settlement restructuring. vi) The first phases of the Go-George service have been implemented and road infrastructure is in place (but to be extended) to support the future rollout of the service to areas not serviced yet.
Population Growth, Housing Demand and Growth Absorption	<p>Challenges</p> <ul style="list-style-type: none"> i) Ability to absorb the urban population growth within the urban areas and demarcated urban edges is a challenge. ii) A high housing demand (backlog, including informal structures and projected population growth) is estimated for the period 2021 to 2031. iii) Ability to render the services to be provided to satisfy the needs of the growing population relates not only to housing provision (rental/GSP) but also to creating dignified living conditions, public realm, public transport connectivity (implemented) and access to socio-economic facilities, opportunities and services. iv) The under-provision of housing opportunities in the gap- and middle-income market. <p>Opportunities</p> <ul style="list-style-type: none"> i) Infill development of vacant and underutilized land. ii) Uptake of latent rights on developed land. iii) Ability to absorb demand relating to residential growth (backlog and growth) in the next 10 years is estimated at 82-90%. iv) The compact urban form is conducive to densification and intensification enabling a more sustainable and integrated spatial pattern. v) A high quality, affordable public transport system is key to overcoming spatial barriers through enhanced, inclusive accessibility.
Economic Growth and Performance	<p>Challenges</p> <ul style="list-style-type: none"> i) Climate change and associated increasing natural risk factors such as drought, fire and water security significantly affect the primary economic sector. ii) Gap between skilled and unskilled labour force is increasing and accommodation of the informal sector is to be addressed iii) Limited suitable space in the lower income areas allocated for economic activity in lower-income areas iv) Land for industrial expansion is limited. v) Economic development in priority nodes is not adequately incentivized.

Theme	Spatial Opportunities
	<p>Opportunities</p> <ul style="list-style-type: none"> i) The promotion of intensive agriculture practices, agri-processing and small farmer development ii) Enhance resilience in the land use management system to provide an enabling environment for agricultural and economic development. iii) Significant uptake of industrial lands is an indication of demand and points to the possible increase in job opportunities. iv) The agglomeration of tertiary uses in well-located positions not only facilitates economic sustainability and coordinated infrastructure planning but also benefits most of the users. A system of nodes, precincts, corridors and specialized activity areas guide the coordinated allocation of area for economic activity. v) The role of George as an administrative centre (government offices, regional business locality) must be supported. vi) The emerging airport support zone renders economic- and job creation opportunities. vii) George is identified as a Regional Development Anchor in the Provincial Development Framework is an opportunity to attract investment (public and private) viii) The underutilized rail infrastructure creates transportation and economic development opportunities.
Transformation and Integration	<p>Challenges</p> <ul style="list-style-type: none"> i) Poor provision of mixed-use development, low diversification of housing typologies and lack of inclusionary housing results in exclusion and counteracts efforts to attain spatial integration. ii) Subsidized housing development in new residential development along the periphery, within the urban development boundary, is still occurring. iii) The continued challenge to undo the spatial legacy of segregation and the inequitable allocation of resources left on the towns, villages and farms in the Greater George Area, and provide humane and enabling living environments for all. iv) Lack of significant economic development in lower income areas and connectivity to areas of existing opportunities. v) Identified social housing opportunities in the central location have not been realised. Slow roll-out of identified housing opportunities in central locations. vi) Limited affordable housing opportunities exist, enabling upward mobility. vii) Lack of road network linkages to integrate communities and enable mobility and access (social and economic). <p>Opportunities</p> <ul style="list-style-type: none"> i) Smaller vacant and underutilized sites may enable the provision of smaller affordable housing projects, which will make the assimilation of the beneficiary communities easier. ii) The intervention and roll-out of social housing opportunities and identified affordable housing opportunity areas will be catalytic in satisfying affordable housing demand iii) Latent rights in core areas are the basis of an enabling environment for the swifter uptake of housing opportunities, subject to incentives. iv) The re-purposing of buildings in good locations should be factored into Human Settlement Planning. George is designed to facilitate connectivity through public transport planned along all main corridors connecting the residential neighborhoods with the current areas of economic- and employment opportunity
Environmental Resilience	<p>Challenges</p> <ul style="list-style-type: none"> i) Successfully implement climate change mitigation strategies and adaptation methods throughout the Municipal area. ii) Resilience to natural disasters including droughts, floods and fires must be improved. iii) Urban expansion and encroachment threaten the of sustainability biodiversity assets and ecological infrastructure functioning of the natural areas and systems. iv) Water resources are threatened. v) Waste Management and illegal dumping to be addressed. vi) The threats of continued agriculture and urban development on coastal areas, estuaries and coastal access. vii) Incremental development of properties in naturally sensitive areas. viii)Uncontrolled agriculture

Theme	Spatial Opportunities
	development threatens natural systems in certain areas.
	<p>Opportunities</p> <ul style="list-style-type: none"> i) The uniqueness of the Garden Route and George, as a national treasure, has been underscored in various provincial and national policies. Supports a quality living environment ii) Environmental data sets and guidelines (policies/concepts/intent) enable informed decision making to avoid erosion of natural areas and potential threats to natural resources and the integrity of the natural system (ecological infrastructure) iii) The ability of George to protect its natural resources supports economic development and tourism opportunities. iv) According to projections in the NSDF, water security in George supports relative resilience in the agricultural and developmental sectors.

5.7 The Spatial Proposals of the SDF

5.7.1 Spatial development 20 -year vision statement

George Municipality's integrated development vision of 'A City for a Sustainable Future', is supported by a Spatial Planning Vision to guide the George MSDF.

The Spatial Planning Vision is to: Develop George as a resilient regional development anchor of excellence for prosperity, inclusive- and smart growth.

5.7.2 Strategic Focus and Spatial Alignment between the IDP and MSDF

The MSDF subscribes to the vision, values and motto of the IDP.

The strategic goals of the IDP were applied as informants in developing the strategy focus of the MSDF. The George Municipality ascribes to a Smart city concept to create a George that is safe, secure and environmentally green and efficient. The MSDF is a tool to create a smart, integrated and inclusive city and enables spatial application of the Key Performance Areas where spatial implication applies.

Spatial alignment of various functional sectors- and master plans to the vision, strategies, policies and proposals in the MSDF is regarded as critical for the successful implementation of the MSDF.

With due regard to the three main pillars of a smart city, being governance and management services, infrastructure, and human – and social services, the spatial concept expressed in the MSDF is informed by the natural- and rural environment, the built environment and the socio-economic environment, focusing on the following key aspects:

- Spatial configuration.
- Settlement and population dispersion.
- Population growth, Housing Demand and Growth Absorption.
- Economic Growth and Performance.
- Transformation and Integration.
- Environmental Resilience.

As a result, the spatial concept of the MSDF is based on four spatial drivers which are applied at both municipal- and city scales. These drivers include:

- the natural and rural environment;

- settlements;
- system of nodes, corridors and precincts; and
- the accessibility networks.

The performance of the spatial divers is supported by the three spatial strategies described in 4.5 of the MSDF2023 and includes policies for guiding and promoting development in George.

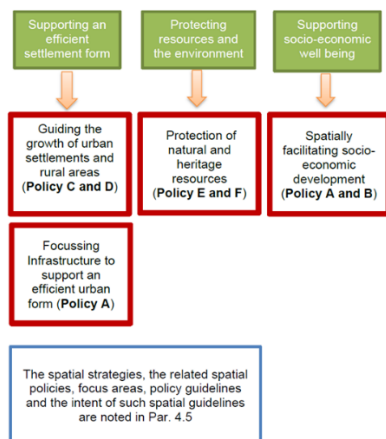

The infrastructure and built environmental programs, articulated in the five-year IDP should find their origins in the MSDF, which is a 20-year plan for the management of the physical growth and development of the Municipality. The alignment between budget allocation and municipal plans is articulated in the various infrastructure investment programs required to implement the MSDF.

The link between the budget decision making process and the plans and strategies of the Municipality is enabled through the implementation of the Capital Expenditure Framework (CEF). In creating the link between finance, spatial planning and the infrastructure- or technical departments of the municipality the CEF creates a golden thread that runs from the Municipality's long-term strategic development vision, and sector planning, through the budget allocation process, to implementation. In this way, infrastructure spending should progressively realize the strategic vision of the Municipality.

5.7.3 Spatial Proposals and Structuring Elements of the SDF

The three main strategic spatial development approaches to the development in George (Consolidate, Strengthen and Smart Growth) are applied in the Strategies, Policies Guiding Principles and Implementation Actions contained in the MSDF, to ensure that the intent of the spatial strategies is realized. Three main spatial strategies apply:

Figure 52: Spatial Development Approaches

The Policies emanating from the guiding spatial strategies are indicative of “What” the MSDF wishes to achieve and include:

- Prioritize infrastructure which yields the best cost-benefit ratio, from a social and economic perspective and facilitates the spatial concept (10-year horizon).
- Facilitate enabling and inclusive Economic Growth.
- Manage the Growth of Urban Settlements, and accommodation of rural living, to ensure the optimum and efficient use of resources.
- Balanced, integrated housing options to be provided.

- e) Manage the use of land in the Municipal area in a manner which protects natural resources, ecological functioning and -services, as well as the rural character.
- f) Celebrate Heritage assets in a manner that contributes to the renewal of urban or rural quality and opportunity.

Details on the spatial principles applicable to these strategies and policies are contained in Table 14 in the MSDF2023) along with the policy guidelines that relate to “how” the spatial strategies and policies will be applied and are read with spatial elements which represent various spatial structuring concepts (Table 13 in the MSDF2023, including:

Table 53: Spatial Structuring Concepts

No	Name	Explanation
1	Node/ Precinct	<ul style="list-style-type: none"> Nodes are areas where a higher intensity of land uses, and activities are supported and promoted. Typically, any given municipal area would accommodate a hierarchy of nodes that indicate the relative intensity of development anticipated for the various nodes, their varying sizes and their dominant nature. A hierarchy of nodes is proposed for the municipal area. Nodes are strategically located areas on high-usage routes where a high concentration of activities and mix of land uses (commercial and public/community facilities) should be encouraged, appropriate to the character of the area and its role in the spatial structure. In addition, private sector investment should be supported through interventions in the public realm, which would typically require an urban design plan that addresses hard and soft landscaping, street furniture, street cross sections, parking and accommodation of public transport. A further critical component for the establishment of community nodes is the clustered provision of new public facilities such as schools, clinics and community halls. In addition, private sector investment should include interventions in the public realm, which would typically require an urban design plan that addresses hard and soft landscaping, street furniture, street cross sections, parking and accommodation of public transport and shared community spaces. Some small-scale (micro/boutique) industries and limited-impact manufacturing land (such as cottage industries/small bakeries) use can be considered when it is linked with a Business/Commercial component. <p>However, the Business/Commercial component must still be the dominant land use for the development as a whole or individually for each Business/Commercial Company</p>
1a	Central Business District (CBD) Category A Node	<ul style="list-style-type: none"> The Central Business district is the primary economic core of the city area, consisting of main businesses, commercial activities, corporate head offices, regional community services, transportation hubs and open spaces. Focussing on mixed land uses including high-density residential. Development of flats advised to include a retail component on the ground floor. The CBD is subject to the restructuring zone together with the residential densification fringe, this fringe relates density in accordance with distance from public transport routes. Measured as walking distance from public transport routes (80u/ha (or more to be motivated) for 150m, 60u/ha in 151-350m and 45u/ha for 351-500m. The CBD, as a whole is considered a residential densification area. Mixed use which includes large office blocks and retail uses is contained in the CBD core. The proclaimed Restructuring Zone is included in the CBD
1b	Commercial Precinct Category B Node	<ul style="list-style-type: none"> Commercial precincts act as areas of mixed use commercial and retail nodes. These sites include business opportunities, shopping centres and residential densification. These zones are located along mobility routes with public transport transfer locations to promote access to facilities and services. Transport Orientated Development (TOD) envisioned for commercial precincts. Residential densification promoted in areas surrounding commercial precincts. Offices not to be included in these areas, should only be located in the CBD. Commercial precincts may include tourism related activities or facilities to increase viability. Residential Densification– measured as walking distance from public transport route, directly adjacent to the node boundary (80u/ha (or more to be motivated) for 150m, 60u/ha in 151-350m and 45u/ha for 351-500m. Residential in node only above ground floor.

No	Name	Explanation
1c	Neighbourhood Centre Category C Node	<ul style="list-style-type: none"> Neighbourhood centres are characterised by a cluster of shops including large and small retail facilities. These zones aim to provide for surrounding neighbourhoods. Excludes the development of offices. <p>These areas are limited to a maximum floor area of 12000m².</p>
1d	Local Convenience Centre Category D	<ul style="list-style-type: none"> Small shops (maximum 250m² leasable) to a maximum of (Building regulations) 1000m² leasable area in total per node. Focus on providing day-to-day products for surrounding residents. Can accommodate residential opportunities above ground, for example, flats, limited to two stories. <p>This zone excludes offices.</p>
1e	Tourism Precinct	<ul style="list-style-type: none"> Areas identified to contain a combination of tourist related facilities and accommodation. Not a retail node but may include tourism related small shops (convenience), restaurants, sport and recreation- and services- conditions to be included in land use application. Mitigation of environmental issues and impacts of climate change to be addressed during the development process. Visual impact to be mitigated in areas of scenic value and along landscapes. Public access to be protected in all instances. <p>Applicable heritage and cultural resources to be protected and incorporated.</p>
1f	Agri-Tourism	<ul style="list-style-type: none"> Areas located along the R102 and R404 have been identified as areas to promote agriculture activities in combination with recreational and tourist related facilities. These zones seek to increase the viability of the airport support node. Agricultural industry aimed at improving tourist related activities and facilities to be encouraged. Consent uses allowed on Agricultural Zone I properties to be used as a guide for development. The subdivision of agricultural land will not be supported in principle, unless in an intensive agriculture area. Urban residential land uses not supported; areas used for non-urban activities. <p>Visual Impact (scenic vista) and context character are to be considered.</p>
A`	Airport Precinct	<ul style="list-style-type: none"> The airport precinct refers to the airport together with proposed land uses surrounding the area that will be ancillary to the airport. Airport area includes airport infrastructure (including terminal building), tourism related uses and accommodation, renewable energy structures, warehousing/ light industrial (logistics, cargo and cold storage bulk freight) to support a freight facility extension and aviation-related use, transport-orientated development and facilities. Non-residential node – no residential density zone applicable Industrial support area, link to agri-processing zone <p>Surrounding land used to be restricted in order to protect the flight airspace.</p>
1h	Mixed use investment sites	<ul style="list-style-type: none"> Applicable to all relatively large-scale developments (more than 20 housing opportunities, with a mix of or either social and economic uses) The nature of proposed development on these sites varies based on the site context. These project areas aim to provide a graded income- and density mix, combined with significant public realm interventions and transport-oriented infrastructure/facilities. Integrated development to include appropriate socio-economic opportunities and fine grain integration of uses <p>Attention is to be given to the integration of these uses with adjacent development (urban or rural) fabric and transportation/infrastructure/natural/ environmental/NMT networks.</p>
1i	Public realm	<p>These areas are designated for investigation of upgrading of public realm to create community areas, markets, trading spaces etc.</p>

No	Name	Explanation
1j	Utility precinct	In addition to municipal infrastructure networks, various utility precincts are noted to accommodate combined utility infrastructure uses, including solar installations, water-sewer- and refuse infrastructure
2	Gateway	<ul style="list-style-type: none"> Gateways indicate entrance points to urban settlements which require road design and land use management interventions (visual impact, signage and landscaping) to enhance the sense of place. Interventions along access routes are focused on physical upgrades, roadside development management and land use management interventions. <p>Areas outside these gateways are to be treated as rural landscapes. (Additional gateways added to rural settlement areas, including Hoekwil, Uniondale, Herolds Bay; and any area with an urban edge to indicate transition from rural to urban.)</p>
3	Green Gateway	Green gateways are strategic access points that must provide public access to the green system/network, including coastal access points, and access to tourist precincts and protected areas.
4	Commercial Corridor/ Activity Spine/Street	<ul style="list-style-type: none"> Commercial Corridors refer to routes that form activity spines along which a mix of high-density urban uses should be encouraged, and public transport should be promoted. AMP to reflect roadside development environment. Fine grain access supported, or secondary access system provided. Activity (mixed use) corridor, along public transport route, with secondary access possibilities. Includes TOD opportunity, business/retail, industrial transition, tourism, and higher density residential. Only existing offices (not extension of office use). Road design to support pedestrian orientated development and vehicle access should not be a priority for business use. Specifically aimed at supporting vibrant, existing street front activity. Development of roads as “Complete Streets”, inclusive of high-quality pedestrian, non-motorized transport, public transport and private car travel, within a high-quality green landscape that celebrates the ‘sense of place’ of George. <p>Stormwater planning to show active use of the road verge for recreation purposes, as part of SUDS planning.</p>
5	Mobility Route/ Principal Arterial Routes	<ul style="list-style-type: none"> Mobility routes refer to roads that function as primary mobility routes linking settlements as well as neighbourhoods. Access management plans (including access spacing) to reflect urban- and rural areas in order to support nodal precincts. All areas within the urban edge are to be considered urban. Mobility specifications are not to be applied in areas indicated as community spines. The main public transport routes follow the main arterials and link the main nodes and precincts. <p>Zones of residential densification are encouraged along the main routes.</p>
6	Scenic Route	<ul style="list-style-type: none"> Scenic routes refer to routes that provide vistas over scenic landscapes and the experience of a sense of place. All main roads (highways and main arterials are considered scenic routes to a degree, but the main scenic routes are noted in Par Error! Reference source not found.). <p>Land use management for scenic routes should be aimed at retaining the sense of place and important vistas from these routes. The focus is thus largely on managing development adjacent to these routes.</p>
7	Retained Rural Areas	<ul style="list-style-type: none"> Retained rural areas include undeveloped (wilderness), rural and agricultural areas that must be retained, protected and/or improved (e.g., alien clearing). The protection of these areas is critical to ensure that the ecosystems which support life in the George area function optimally and that agriculture as a key driver of the local economy retains its viability. Retained rural areas do not promote or encourage the land to be used for land uses normally associated with urban areas. Although, agri-processing initiatives and developments can be allowed. Development guidelines should be agreed upon upfront for these areas of significant rural character and landscape value, particularly where these fall within areas of high botanical, heritage, cultural and scenic value within the urban edge. General development guidelines include:

No	Name	Explanation
		<ul style="list-style-type: none"> a) Appropriate treatment of interfaces, heights, form of development and intensity - reinforce rural landscape and activity character and reflect compact unobtrusive nodes, conforming to local vernacular in terms of scale, form and design. b) Development to comprise natural/scenic/culturally compatible land uses informed by transformation thresholds, including: <ul style="list-style-type: none"> (i) Resort and holiday accommodation. (ii) Recreation facilities; and (iii) Social and Community Facilities (e.g., ECDs). c) Limit development footprints of low-density housing and facilities: WC: Rural Development Guidelines. d) Maintaining the dominance of the natural and agricultural landscapes. e) Create a dominant ecological conservation and preservation area as a major component of undisturbed landscape to form part of the Critical Biodiversity Areas (CBAs). f) Create strategic ecological corridors through the site to strengthen the linkages between CBAs. g) Introduce a gradient of landscape uses that filter from conservation areas (biodiversity and/or heritage) through to the community gardens that act as a functional buffer between the conservation area and development, protecting conservation worthy places and heritage areas (e.g., farmsteads). h) The settings of special cultural features are to be protected by providing them with 'breathing space' and leaving public views uncluttered. i) Traditional patterns of plantings are to be protected by ensuring that existing tree alignments are not destroyed but are reinforced or replaced by enhancing traditional patterns with suitable species. j) Avoid infrastructure projects which create visual and physical barriers, and ensure sensitive siting of infrastructure, especially renewable energy installations (e.g., solar). k) Maintaining dominant landscape features and their continuity (e.g., ridges, valleys). l) Avoid wall and land-locked effects by maintaining visual permeability to surrounding rural landscapes. m) Provide view corridors and pedestrian/open space linkages. n) Low impact/green technologies implemented wherever possible, and o) Integrate settlement patterns with the existing water system through the use of green infrastructure and sustainable urban drainage systems. This may require an Environmental Impact Assessment, Visual Impact Assessment and/or Heritage Impact Assessment.
8	Critical Biodiversity Area (CBA)	<ul style="list-style-type: none"> ■ Critical Biodiversity Areas are areas required to meet biodiversity targets for ecosystems, species and ecological processes, as identified in a systematic biodiversity plan. ■ The primary purpose of including the CBA (and ESA) layer on the data layers (municipal GIS) is to guide decision-making about where best to locate development. It should inform land use planning, environmental assessments and authorisations, and natural resource management by a range of sectors whose policies and decisions impact biodiversity. It is the biodiversity sector's input into multi-sectoral planning and decision-making processes. <p>Note: An area being designated as a CBA is a scientific determination and not a zonation. Areas indicated as CBAs indicate sensitivity and not development rights. Sensitivity is determined by many factors in addition to the vegetation type and condition. Any dispute over whether a site qualifies as a CBA needs to be undertaken through a verification protocol. It is not up to the EAP/specialist/applicant to decide whether a site qualifies as a CBA or not.</p> <p>Note: Data presented by ESA and CBA may show fragmented areas but must be read with other environmental indicators such as Priority Natural areas, hydrological buffers, scenic routes and related requirements.</p>
9	Ecological Support Areas	<ul style="list-style-type: none"> ■ Ecological Support Areas (ESAs) are not essential for meeting biodiversity targets but play an important role in supporting the ecological functioning of CBAs and/or in delivering ecosystem services. ■ CBAs and ESAs may be terrestrial or aquatic. ■ The primary purpose of including the ESA layer on the Focus Area Framework Plans is to guide decision-making about where best to locate development. It should inform land-use planning, environmental assessments and authorisations, and natural resource management, by a range of sectors whose policies and decisions impact biodiversity. It is the biodiversity sector's input into multi-sectoral planning and decision-making processes.

No	Name	Explanation
		CBA and ESA must be applied as components of a continuous whole in the evaluation of environmental impact.
10	Priority Natural Area Layer	<ul style="list-style-type: none"> The layer refers to a combination of the proclaimed protected areas, Critical Biodiversity Area, Environmental Support Area, Coastal Management Line and Garden route national park buffer area (SANParks) to be read with the hydrological buffer area and slope analysis. Area indicated as a continuous environmental area. The layer includes the environmental conservation agreements, Marine buffer area along the coast as well as environmental stewardship areas. The intent of this area is not to negate development but to seek to reduce the negative impact on areas that may influence the environmental integrity of the whole area. The intent of this layer is to maintain high biodiversity areas and not just to mitigate negative impacts Mitigation to be considered on site specific circumstances. (Include conservation agreement areas and marine buffer areas and coastal protection zones on the environmental layer). Input from relevant environmental authorities required on proposed developments. <p>Climate change adaptation is to be considered in all decision making regarding new development and/or development upgrades</p>
11	Green Core	<ul style="list-style-type: none"> The Green Core comprises of the following: green spaces including vacant plots, public and private open spaces (which include formal recreational facilities and ancillary uses), and green corridors in urban areas that connect retained rural areas. Green Cores are thus envisioned to form supporting ecological corridors (to CBAs and ESAs) and at the same time provide recreation areas and potential opportunities for urban agriculture. These areas should be protected from inappropriate urban development. Only low-key interventions aimed at providing appropriate public/community facilities (possibly through a long-term lease to private sector operators) and security measures should be allowed. Planning for such interventions must include urban design and landscaping plans and, in some instances, the inputs of environmental specialists may be required to deal with issues such as floodplain management and impacts on heritage resources. In addition, the interface with surrounding private land holdings may need to be addressed as fencing and physical access may pose a challenge. <p>The purpose of the Green Core is to establish a functional open space system.</p>
12	Intensive Agriculture. Peri-Urban Farming	<ul style="list-style-type: none"> These are agricultural areas situated on the urban fringe, which could be suitable for intensive farming, and/or land reform projects depending on the specific circumstances. Principle use remains agriculture (Agriculture Zone I) and division to a minimum area of 40ha is supported, subject to comment from the relevant authorities. <p>Land use management issues that will have to be addressed include plot sizes; the nature of agriculture practices including tunnel farming (i.e., visual impact) and livestock farming (it would for instance not be desirable to accommodate certain types of livestock farming adjacent to residential areas); the scale and placement of structures that may be allowed, managing the visual impact of smaller land parcels; and the potential for secondary uses such as farmstalls.</p>
13	Approved Housing Projects	Approved housing projects indicate sites where public housing development projects are in the implementation phase.
14	Proposed Future Housing Projects	<ul style="list-style-type: none"> Proposed future housing projects indicate sites that have been identified as potential sites for public housing development projects and where feasibilities have been completed to the satisfaction of WC: DoHS, which support development in principle, including identified priority social housing sites identified <p>The Human Settlements Plan shows areas under investigation and should aligned with the principles of the MSDF.</p>
15	Gap Housing possibilities	<ul style="list-style-type: none"> Areas identified for investigation for gap housing (ownership)
16	Industrial	<ul style="list-style-type: none"> Industrial refers to existing and proposed industrial areas. Industrial development, and in particular, agri-processing is regarded as a key driver of the local economy.

No	Name	Explanation
		<ul style="list-style-type: none"> It is thus suggested that the new trends in manufacturing can be accommodated in the land use management system, in particular the need for smaller premises. <p>Some overlap with Business/ Commercial land uses can be accommodated, should it be linked to industrial uses.</p>
17	Residential Densification	<ul style="list-style-type: none"> Densification zones are areas within existing settlements where residential densification should be accommodated and promoted through appropriate mechanisms such as redevelopment, infill, subdivision, second dwellings, sectional title, greenfield or brownfield development. <p>Densification is promoted in all urban areas with a specific focus on areas surrounding primary transport corridors and identified nodes. Density – measured as walking distance from public transport route (80u/ha (or more to be motivated) for 150m, 60u/ha in 151-350m and 45u/ha for 351-500m.</p>
18	Public/ Community Facility/ School/ Education	This designation includes a variety of public and community facilities, libraries and various educational facilities such as crèches, schools and tertiary educational facilities as well as, ancillary uses such as sports fields, boarding facilities and student accommodation.
19	Urban Infill	A key strategy of this SDF is the infill development of strategic sites in urban areas. Urban infill is largely focused on achieving higher densities in urban settlements and providing a greater variety of housing options to speed up the delivery process and create more sustainable settlements.
21	Urban Nodes	Urban Nodes form the highest order in the hierarchy of settlements in the municipal area. These nodes represent the areas for high intensity urban development for integrated human settlements where the largest spectrum of specialised land uses should be accommodated in the municipal area. Urban Nodes can be divided into the Primary Regional Service Centre and the Secondary. Refer to Error! Reference source not found..
22	Rural Nodes	<ul style="list-style-type: none"> Rural Nodes or settlements are nodes in the rural hinterland within the Retained Rural areas, including the Agricultural Zone. They are located along key movement routes and serve as service centres for the rural areas and agricultural areas. <p>They should provide services and goods to the immediate rural areas, but not on the same level as the Urban Nodes, which should serve as centres where specialised goods and services are provided. - The Hierarchy of settlement and nodes apply. Refer to Error! Reference source not found..</p>
24	Small Holding areas	<ul style="list-style-type: none"> Areas recognized as small holding areas and land uses allowed as per the GIZSB and the Rural Development Guidelines. <p>Smallholding areas are restricted as per the relevant LSDF. Refer to Error! Reference source not found..</p>
25	Heritage Sites older than 60 years	<ul style="list-style-type: none"> These are sites that contain buildings/structures older than 60 years. <p>The Heritage Inventory 2016 identifies sites (GIS Layer). Heritage precincts are to be delineated. The Heritage Strategy will aim to add substance to the heritage identification and protection intent.</p>
26	Informal Settlements	An unplanned settlement on land which has not been surveyed or proclaimed as a township, consisting mainly of informal dwellings (shacks).
27	Backyard formalization zones	<ul style="list-style-type: none"> These are areas where significant back yarding occurs and where policy relating to formalization/upgrading of backyard dwelling, either through ownership options or other interventions may apply. <p>To be delineated with due process.</p>
28	Biodiversity Stewardship Sites	<ul style="list-style-type: none"> Biodiversity stewardship is an approach to entering into agreements with private and communal landowners to protect and manage land in biodiversity priority areas, led by conservation authorities in South Africa. It recognises landowners as the custodians of biodiversity on their land. Biodiversity stewardship is based on voluntary commitments from landowners, with a range of different types of Biodiversity Stewardship Agreements available to support conservation and sustainable resource use. Some types of Biodiversity Stewardship Agreements are formally declared as Protected Areas in terms of the Protected Areas Act, providing long-term security for the sites involved.

No	Name	Explanation
		Conditions regarding biodiversity stewardship agreements may be set in properties in the priority natural areas.
29	Urban Edge	<ul style="list-style-type: none"> ■ The Urban Edge is defined as a delineated line that serves to manage, direct and control the outer limits of urban development. ■ This urban edge should be implemented as a planning tool in order to promote the principles of densification, infill development, and compact city, and to establish limits beyond which urban development should not be permitted.
30	Cemetery	An investigation to identify additional cemetery space is underway. The extension of existing cemetery facilities, where appropriate, is noted (to be confirmed)
Disclaimers: Spatial Elements		<ul style="list-style-type: none"> ■ Spatial Element Designations Disclaimer 1 - The designations of spatial elements, except for the Urban Edge, on the maps relate to described elements, which may be updated as information becomes available and do not have to strictly follow cadastral boundary lines. In the event of uncertainty in the application of the designated spatial element, the Municipality has the authority to confirm or make the determination if the land is located within or outside the designated spatial element. The Municipality has the authority to correct minor amendments on an ad-hoc basis in the event of oversights or minor administrative errors, or where it is deemed necessary, without amending the actual physical text or maps of the SDF document itself. <p>Designations Disclaimer 2 - Due to the scale of the designations on maps, these map elements can cover large tracts of land. Cadastral specific determinations if required in terms of more detailed design and planning of the actual area to be developed as part of the land survey and registration activities, architectural design, and any other legislated approval processes, would also be determined on an ad-hoc and need-to-know basis. This would also not require the actual physical amendment of the text or maps of the SDF within the actual document itself.</p>

5.8 Implementation Framework

The SPLUMA guidelines require, as part of the MSDF, a high-level Implementation Framework setting out the required measures that will support the adoption of the SDF proposals while aligning the capital investment and budgeting process moving forward.

5.8.1 SPLUMA REQUIREMENTS

SPLUMA requires that MSDF's include an Implementation Framework that contains the following:

- i. Necessary amendments to the Municipal Zoning Scheme By-Law
- ii. Specification of institutional arrangements necessary for implementation
- iii. Specification of implementation targets, including dates and monitoring indicators; and
- iv. Specification where necessary, of any arrangements for partnerships in the implementation process.

5.8.1.1 Sector Requirements

Part 5.1.2 of the MSDF2023 refers:

The MSDF is a long term, transversal planning and coordination tool and a spatial expression of the George Municipality's IDP. While the MSDF is informed by the Sector Plans, strategically and spatially, the Sector Plans should be led by the MSDF. To this end, with the adoption of this revised MSDF for the George Municipality, when the Municipality's Sector Plans are reviewed, the MSDF must be a key consideration or framework for such a review in order to ensure alignment and for the sector plans to realise their full potential as implementation tools of the MSDF.

5.8.1.2 Municipal Zoning Scheme By-law Alignment

Alignment between MSDF2023 and the George Integrated Zoning Scheme Bylaw (GIZSB), was sought over the course of the amendment process of MSDF. The process of amendment of the MSDF and GIZSB was integrated. The amended Zoning Scheme Bylaw was promulgated in 2023 and contains policies from the MSDF, incorporated in the zoning scheme as new parameters. A schedule of amendments to both documents was kept. Alignment will be reviewed every five years from the promulgation of the Bylaw.

5.8.1.3 Institutional Arrangements

Implementation actions are to be budgeted and scheduled by the various responsible Departments, as prioritized in the CEF. Environmental Management capacity is required to develop the Climate Change Action Plan, based on the Climate Change Mitigation and Adaptation Policies applicable to the District.

The MSDF PC and ISC will be consulted in future MSDF monitoring and review processes.

5.8.1.4 Specification of Implementation Targets

The MSDF Implementation Framework was adopted concurrently with the adoption of the MSDF and IDP in May 2023. The prioritization of implementation projects identified in the MSDF and respective sector plans have been consolidated in the CEF and ranked in accordance with the criteria set in the prioritization tools.

5.8.1.5 Partnership in the Implementation Process

The development of the Implementation Framework may identify additional opportunities for partnership, over and above the inter-governmental partnerships in respect of standard service provision. The process to date has identified the following

specific partnerships in the Implementation process:

- i. Biodiversity Stewardship Agreements with conservation authorities
- ii. Participation in the Neighborhood Development Participation Program
- iii. Participative structures for the CBD regeneration project
- iv. Conditional Land Availability and Project Agreements relating to implementation projects

5.8.2 Settlement hierarchy, priority development areas and themes

5.8.2.1 Settlement Hierarchy

The settlement Hierarchy of George is categorized as follows:

Table 54: Settlement Hierarchy

Settlement Type	Function / Role	Settlement Type
Regional Development Anchor (Services Centre)	Main urban centre in terms of location of new housing, jobs, services and facilities with a focus on development and densification. The centre hosts main health, education, and cultural facilities as well as government services. As an economic hub, it contains industry, services sector and Innovative business environments. Significant regional commercial, service and administrative centre, industrial node, and transport and logistics hub: an emerging “regional” city with well-integrated residential and higher order activity centres.	George City Area
Secondary Service Centre (District town)	Urban centres with a special function (often tourism related) as well as a role in terms of servicing the surrounding areas and containing a mix of economic activities and services.	Uniondale (Rural Settlement and Service Centre) Wilderness (Coastal residential, tourism, and local business node, recreation area.)
Small (rural) town	Urban area with a dominant rural character, a limited and mostly singular economic base (e.g., tourism, agricultural services) and functions as a service centre to its broader environs.	Haarlem
Rural / Tourism Settlement	A rural or recreational nodal point is characterised by community functions as well as a state of permanence (settled population). Such settlements function as agri-service centres, tourism centres, and educational centres, individually or providing a combination thereof.	Herolds Bay and surrounding (existing) estates Victoria Bay Touwsrante Hoekwil Kleinkrantz Le Grand
In addition to the abovementioned settlement areas, there are low residential density areas, including:		
Small Holdings	Low density rural living, with an agriculture component. (Small Holdings areas noted in relevant LSDF)	Victoria Bay SH Uniondale SH Haarlem SH Victoria Heights/Bay SH Wilderness Heights SH Rondevlei SH Onder- and Bo- Langvlei SH Pacaltsdorp south SH Blanco SH Hoekwil SH
Farms (registered as farm portions)	Agricultural and natural use with very low-density residential settlement	
Within the rural areas identified hamlets/rural places are localities where rural support services are located.		
Rural Place (Hamlet)	Minor local service points or places of gathering e.g., schools, churches, rural shops, and transport nodes (bus stops, railway stations), usually have no, or relatively	Avontuur Noll Herold (incl Campher) De Vlucht

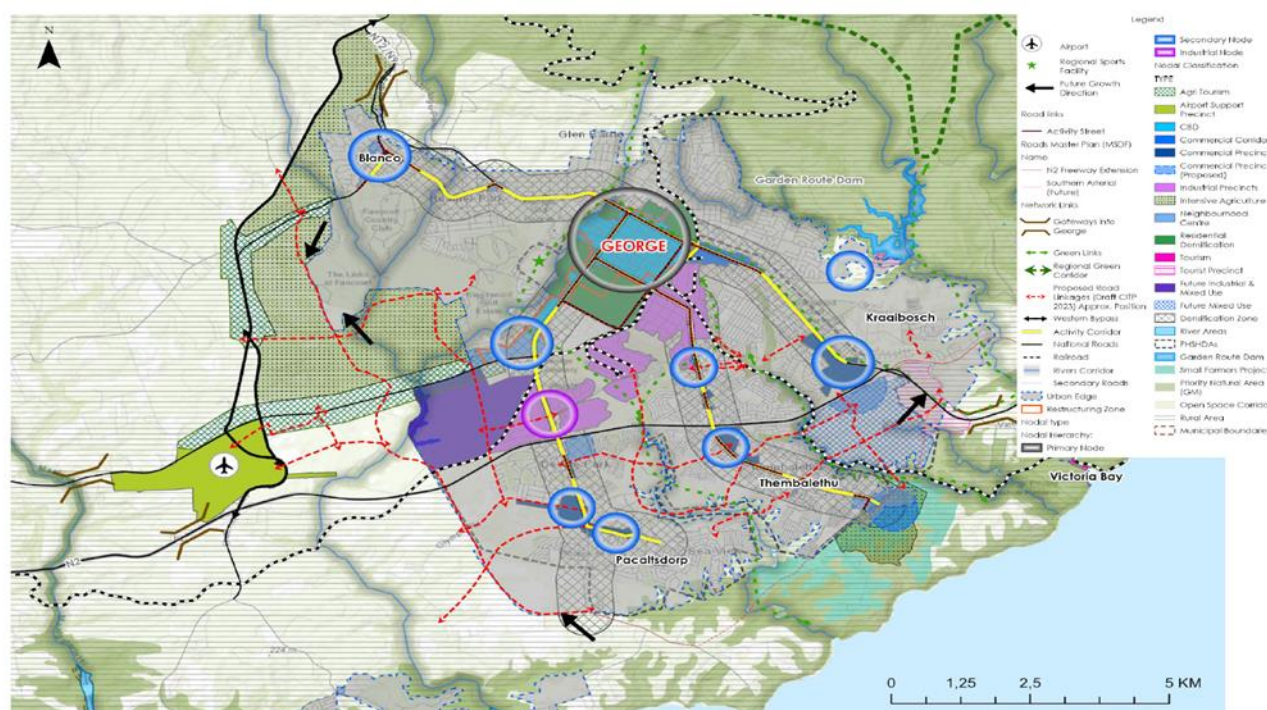

Settlement Type	Function / Role	Settlement Type
	limited resident population/ settlement.	
Minor Rural Places in the Greater George Area (mostly locality reference points only)		
Minor Rural Place	Agri-area	Rooilooop Snyberg Barandas Toorwater Nietgenaamd
	Agri-area	Roorivier
	Agri-area	Eseljacht
	Agri-area	Ongelegen
	Agri-area	Molenrivier
	Agri-area	Eensaamheid
	Agri-area	Geelhoutboom
	Agri-area	Hoogekraal
	Agri-area	Sinksabrug
	Agri-area	Waboomskraal

5.8.2.2 Priority Investment Area

The priority investment areas are the principal mixed-use nodes and precincts, including the George CBD and secondary nodes, economic zones, and specific overlay zones.

Map 30 included in the MSDF shows the various components of the spatial categorisation in the city area.

Figure 53: MSDF Spatial Categorisation

In addition to the nodes/precincts identified in secondary towns, the priority investment areas in the city area include:

- Priority Investment Area: George CBD Priority Investment Area: York - Beach Road Corridor, Pacaltsdorp and the Pacaltsdorp Precinct and densification area.
- Priority Investment Area: Nelson Mandela Boulevard / Sandkraal Road Corridor, Thembalethu

- c) Priority Investment Area: Blanco Node
- d) Priority Investment Area: George Southeast and the Nelson Mandela Boulevard / Rosemoor / Conville Corridor
- e) Priority Investment Area: Knysna Road Densification and Mixed-Use Interface
- f) Priority Investment Area: Priority Investment Area: Gwayang – Groeneweide Mixed Use Precincts/Nodes and development area

5.8.2.3 CAPITAL EXPENDITURE FRAMEWORK

5.8.2.4 Process

The development of the Capital Expenditure Framework included:

- a) Phase 1: Information Gathering and consolidating of capital investments into a consolidated database.
- b) Phase 2a: Profiling the functional areas and determining the land demand forecasts based on new growth and backlog.
- c) Phase 2b: Translating growth into capital investment needs.
- d) Phase 3: Defining the affordability envelope as per the LTFP.
- e) Phase 4: Developing prioritisation criteria that articulate municipal strategy.
- f) Phase 5: Prioritization of capital investments needed, sequence and fit within affordability envelop

During Phase 1 the Municipal Capital Expenditure projects were mapped, where possible.

Such projects, in addition to projects identified as IDP priorities (separate category), implementation action from the various sector plans and MSDF, were rated, using a prioritisation tool. Currently, the Municipality is in Phase 4 of the CES process. The location of the project within the priority investment areas is one of the rating criteria (see table below - Figure 20 in the MSDF).

Table 55: Prioritisation Tool for Infrastructure Management

Prioritisation Tool for Infrastructure Investment	
Spatial Strategy Prioritisation Criteria	Criteria 1: Project Falls within a Municipal Scale: Priority Investment Area as per the MSDF? (Y = 1, N = 0)
	Criteria 2: Project Falls within a Settlement Scale Priority Investment Area as per the MSDF? (Y = 1, N = 0)
	Criteria 3: Project Falls within a settlement scale Priority Investment Area, Upgrade Area, Densification Encouragement Area, or Informal Settlement Upgrading Area as per the MSDF? (Y = 1, N = 0)
	Criteria 4: Project directly related to enabling the implementation of an MSDF Spatial Policy or Strategy , such as Spatial Transformation? (Y = 1, N = 0)
	Criteria 5: Will the capital investment benefit the well-being and socio-economic status of poor or low-income areas? (Y = 1, N = 0)
Engineering Prioritisation Criteria	Criteria 6: Is this project addressing a backlog ? (Y = 1, N = 0)
	Criteria 7: Is this project giving effect to services required in terms of a statutory or legal requirement ? (Y = 1, N = 0)
	Criteria 8: Will this project unlock new investments, attract new economic activities, or generate new rates of income for the municipality? (Y = 1, N = 0)
	Criteria 9: Is the project implementation ready ? (Y = 1, N = 0)
	Criteria 10: Is this infrastructure a net Asset (YES) or net Liability (NO) for the municipality? (Y = 1, N = 0)
Financial Prioritisation Criteria	Criteria 11: Will this infrastructure be revenue generating ? (Y = 1, N = 0)
	Criteria 12: Will this infrastructure be affordable to the municipality from a capital investment perspective ? (Y = 1, N = 0)

Criteria 13: – Is the project an asset maintenance / renewal / replacement project? (Y = 1, N = 0)
Criteria 14: Will this infrastructure be affordable to the municipality from an operational / maintenance perspective? (Y = 1, N = 0)

5.8.3 Result: Evaluation: Capital Expenditure in Priority Areas

Approximately 57% of the 579 capital projects included in the CEF evaluation are physically located within the priority zones. Note, however, that the investment benefit of listed projects is mostly related to enabling priority investment areas and includes capital expenditure related to bulk infrastructure and engineering service provision (82,4% of the rated project value). 94.5% of the value of the listed capital investment projects apply to functional areas which include the priority investment areas. The remaining 5.5% can be attributed to service provision and projects in consolidation areas.

5.8.4 Policy Framework

5.1.1.1 Local Spatial Development Frameworks (LSDF's)

Currently, there are ten (10) approved LSDF's and one (1) draft. The LSDF's presents a tool to refine the link between the MSDF intent and the implementation management thereof. The boundaries of the LSDF's must be reviewed to improve alignment with the functional areas identified in the MSDF and applied in the CEF. Although most of the LSDF's were adopted in 2016, some of the implementation actions were conceptualized to align with the 2013 MSDF. As the MSDF is a 20 year plan, the strategic alignment with SPLUMA, which resulted in the amended MSDF did not affect the desirability of the projects envisaged in the LSDF. Therefore some of these projects are in their planning stages. A gap analysis was done for each of the LSDF's, which will inform the amendment of the LSDF's to improve alignment with the 2023MSDF.

5.8.4.1 Land Use Management System

The George Land Use Planning Bylaw gives clear expression to procedures, requirements and processes related to land use management and abides by the principle of good administration.

The George Land Use Management System includes an established land use management scheme, contained in the George Integrated Zoning Scheme Bylaw (GIZSB), which has been aligned with the policies of the MSDF. The review process was done in tangent with the MSDF Amendment Process.

The GIZSB applies to the entire municipal area and seeks to promote resilience in all land use activities, incorporating environmental management instruments and a range of categories of land use management to ensure that the needs of the urban and rural environment are addressed, from a land use management perspective.

The land use scheme gives effect to the MSDF and IDP.

5.8.4.2 Municipal Policy Framework

Several policies have been developed and drafted, in addition to the Bylaws, through which implementation of the policies of the MSDF is addressed.

The overarching Governmental Policy Framework includes various guiding documents, which have been listed and reviewed in the Status Quo stage of the MSDF Amendment process. Additional policies were received and reviewed in the MSDF participative process (via the ISC).

5.9 Catalytic Initiatives

The following Catalytic Projects have been identified:

- a) The Gwayang Mixed Use Development comprised of industrial, commercial and residential development, including the municipal utility zone;
- b) Metro Grounds Industrial Development – site for light industry, training and SMME;
- c) The Thembaletu Neighborhood Development Programme – proposed nodal development and settlement regeneration;
- d) The Garden Route Dam Education precinct – proposed tertiary education / research facility with mixed residential development;
- e) Affordable Housing and Social Housing implementation priorities;
- f) The York Street South Precinct – restructuring zone;
- g) Affordable housing projects in Protea Park and Delville Park.

5.10 Internal- and Inter-municipal planning

A Project Committee (PC) was established to include the participation of Internal Departments, compliant with the requirements of the LUPB Bylaw. In addition to the actions listed in Par 5.5, interaction with Departments included workshops, assimilating documents supplied by the Departments and providing data/documents at various stages (Status Quo, Review, Amendment) to the sectoral departments to ease alignment of their planning. The PC was established by the Municipal Manager to allow such departments to express their needs and requirements of the relevant sectors as input to the MSDF.

An Inter Governmental Steering Committee was established, which included neighbouring Municipalities and the District Municipality.

5.11 Private Sector Joint Planning

The private sector and public formed part of the various process stages of the Review and Amendment of the MSDF. The comments received in response to the latter participation opportunity are still being collated and comments and responses will be contained in a schedule which will be presented with the final MSDF.

Development (governmental and private) proposals are presented at weekly Pre-Application meetings, where alignment with spatial – and land use planning policies and procedures are discussed. Input for Infrastructure Departments and the Environmental Planning Division is provided in such meetings to assist the private sector in moving forward in the planning and implementation of developments that require land use management input.

5.12 Further Planning Work

Further Planning work, identified thus far in the MSDF Amendment process includes:

- a) Heritage Strategy and Precinct Identification (Pacaltsdorp and the CBD);
- b) Municipal Open Space Study and classification;
- c) Environmental Management Plans for Municipal Nature Reserves;
- d) Environmental Management Plans for open spaces, riparian areas and biodiversity corridors;

- e) Strategy for biodiversity and tree offsets;
- f) Climate change action plan;
- g) Haarlem and Uniondale Overlay Zones to enable subdivision and land release and economic development respectively;
- h) Overlay zone for Thembaletu to improve urban design, place making, enable economic opportunity and appropriate informality;
- i) Pacaltsdorp: Nodal development Investigations to unlock economic development opportunities;
- j) Technical studies to facilitate the release of serviced residential land for affordable housing;
- k) Design Guidelines for Social Housing developments;
- l) The CBD regeneration initiative.

5.13 Checklist in Support of Decision Making

Standard Checklists are included in Planning Reports on all land use management applications, and presented to the authorized official and planning tribunal. Such checklists include general considerations applicable to all applications, relate to procedural compliance and alignment with planning policy, gauge the impact on infrastructure and the natural environment and consider the impact on the public interest. The checklists are used to promote good governance and fair administration and are included in all applications to serve before the Planning Tribunal

CHAPTER 6: Ward Priorities and Planning

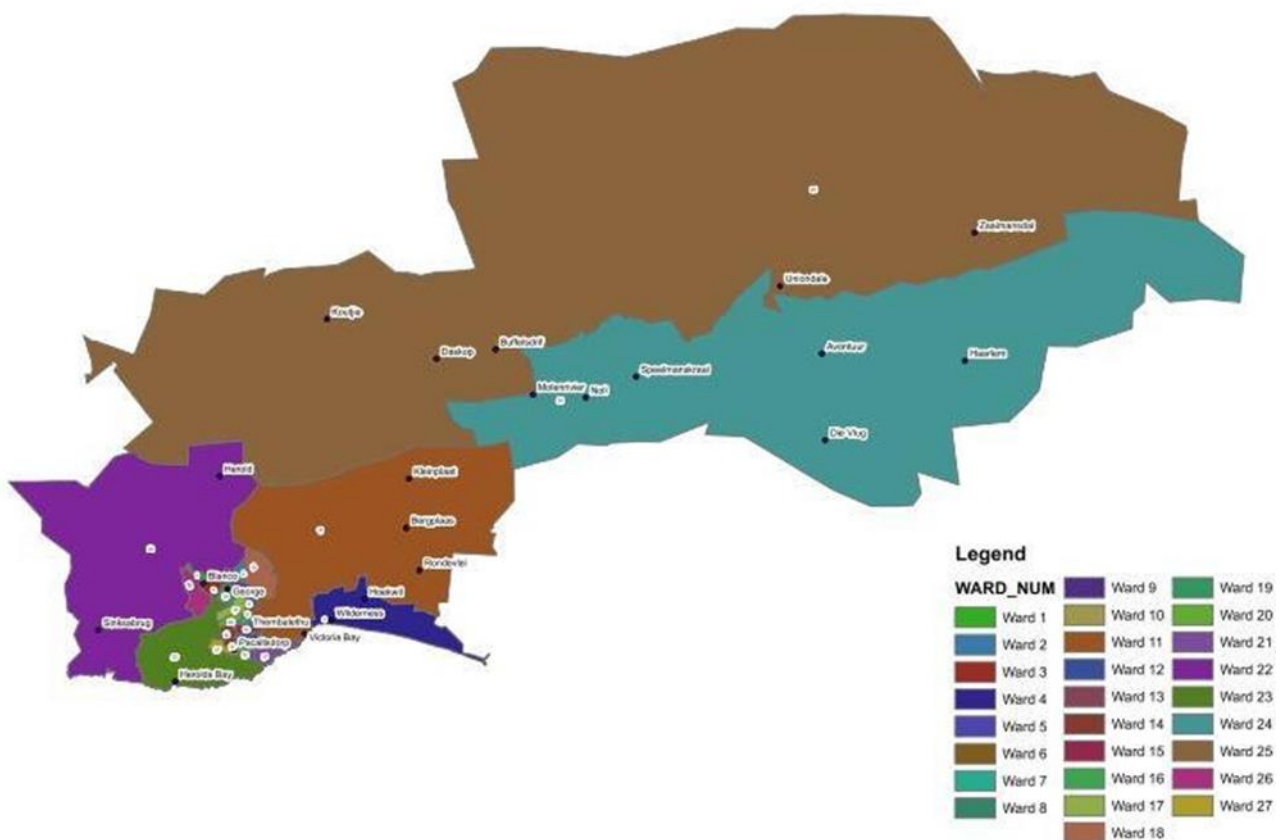

6.1 Introduction

The IDP process is all about determining stakeholder and community needs and priorities as informants to future state intervention. These needs and priorities are then documented and considered as part of operational output, i.e. service delivery, to improve the quality of life of residents within the municipal area.

This chapter focuses on the input received from the stakeholders during these engagements. The input, i.e. issues raised, were refined and prioritised as informants of the budget and development priorities of the Municipality.

The following map shows the geographical area of George Municipality.

Figure 54: Geographic Location of Wards 1-28

6.2 Community Participation

Chapter 4 of the Local Government: Municipal Systems Act, 2000 (Act No. 32 of 2000) (MSA) requires municipalities to create a culture of community participation. According to section 16(1)(a)(i) of the MSA, “A municipality must develop a culture of municipal governance that complements formal representative government with a system of participatory governance, and must for this purpose encourage, and create conditions for, the local community to participate in the affairs of the municipality, including in the preparation, implementation and review of its integrated development plan in terms of Chapter 5”. It is therefore essential to have effective public participation structures in place.

Engagement with the Spatial Development Framework (SDF), Integrated Development Plan (IDP), Budget, and Sector Plans, as well as major municipal policies, by-laws, and decisions, is essential to ensure that these initiatives are designed and

implemented collaboratively with the community. This approach enhances the credibility of the needs identified in the IDP, the budget allocations addressing these needs, and the Strategic Development and Implementation Programme (SDBIP) designed to execute programs and projects aligned with community needs.

Encouragingly, there is a notable trend of mature and constructive public discussions, indicating an increased understanding of the municipality's operations among community members. Direct participation and involvement of ward councillors, communities, and stakeholders in identifying ward-based priorities have significantly enhanced the quality of discussions between the public and the municipality. Ward councillors play a crucial role as intermediaries between the municipality and the public, leveraging their position in Council to ensure that community needs are effectively understood and addressed. However, councillors must uphold the code of ethics for Councillors, maintaining integrity and accountability towards constituents and the municipality to foster responsible local governance.

Public participation occurs through diverse means and platforms, tailored to suit specific audiences or communities.

Communities from varying socio-economic backgrounds often utilize different communication channels. It is essential to cater to these differences and utilize all available platforms optimally, recognizing that certain communities may exhibit apathy towards engagement initiatives.

6.3 Drafting of the 5th Generation IDP 2022 – 2027 Public Participation

Community participation in the drafting of the Integrated Development Plan (IDP) is paramount. The fundamental aim of such engagement is to empower communities to determine their own needs and thus facilitate sustainable development. Local residents possess invaluable insights into the improvements necessary for their areas. By prioritizing these needs, they articulate their vision for development.

To enhance community involvement in the formulation of the 5th Generation IDP 2022-2027, the George Municipality has adopted a revised approach to public participation during the analysis phase. This initiative aims to identify the community's requirements comprehensively. During a Council meeting on 25 August 2023, the George Municipal Council endorsed the IDP and Budget Time Schedule, integral components of the comprehensive IDP and Budget Process Plan as mandated by Section 28 of the Local Government: Municipal Systems Act 32 of 2000.

On October 2, 2023, the IDP unit facilitated a public participation process to provide feedback on ward priorities from all 28 wards. In a departure from previous methods, the George Municipality opted to engage exclusively with Ward Committees and Ward Councillors this time. This approach was chosen to streamline the feedback process and ensure direct input from community representatives. As a result, the amended 5th generation IDP 2022-2027 will proceed to council approval, showcasing the collaborative endeavours of the municipality and its residents.

6.4 Public Participation Statistics (Prior Year)

The public participation process was a bit less challenging October/November 2024. All meetings took place as planned and Haarlem and Uniondale got their own meeting. The municipality managed to acquire participation from all 28 wards, through the ward committee platforms. The attendance ranged between very good in some ward's and others less. Ward Committee members represented their wards in most meetings.

Additionally, here are some statistics that you may find useful to provide a more complete picture of the public participation process:

- Total number of meetings held: 8

- Platform: Clustered Ward Committee & Public Meeting
- Dates: 08 April 2025 to 8 May 2025

The public participation process conducted during April and May 2025 was generally well received across most ward's. The only notable challenge occurred in the Thembaletu wards, where an additional visit was required to try and arrange a community meeting, without any success. Sessions held with ward committees proceeded smoothly and were deemed successful.

A comprehensive report detailing the full process is attached as Annexure A to this document.

6.5 Public Participation Process 2025

George Municipality conducted a public participation process for the Integrated Development Plan (IDP) and Budget from 8 April to 8 May 2025. The purpose of the engagements were to give feedback to ward committees and the public on the progress with the identified IDP Projects and to solicit inputs from the public on the draft Budget for 2025/26. To ensure inclusivity and broad community engagement, sessions were scheduled in two time slots: Morning Sessions (10:00 – 13:00): Dedicated to Ward Committees to allow focused discussions with local representatives. Afternoon Sessions (16:00 – 19:00): Open to the general public, ensuring wider community involvement. This structured approach was designed to accommodate all wards and maximize participation across different stakeholder groups.

6.6 Sector Department Engagements

The IDP unit has implemented various initiatives to foster collaboration between sector departments and the George municipality, ensuring that ward priorities beyond the municipal budget's scope are effectively addressed. Multiple efforts were made to engage with sector departments through both the District Municipality and our Provincial counterparts.

- On 8 August 2023, a preparation meeting was held with the Garden Route District to solicit assistance with engaging the sector departments.
- On 19 September 2023, engagement sessions were conducted with Sector Departments to gather feedback on George municipal ward priorities.

In September 2023, a sector engagement session was successfully conducted with local counterparts, yielding valuable feedback on sectoral requests. However, participation from all sector departments was not achieved, hindering comprehensive feedback on issues arising from respective wards. Subsequently, communication has been initiated with Provincial counterparts, seeking assistance in obtaining feedback from outstanding sector departments to ensure comprehensive coverage of community needs within the IDP. The culmination of these efforts was the successful Public Participation Feedback open day held on 2 October 2023.

6.7 Participatory Improvements

The community public participation realm remains dynamic and continued improvements are made, and the municipality continuously fosters engagement aimed at improving communication between municipality and the community.

The municipality has gained the following:

- Consider scheduling meetings towards the centre of the week rather than on a Monday for better attendance and participation.
- Improve time slot management to ensure meetings run efficiently and stay on schedule.
- Discourage questions during the presenter's presentations to maintain the meeting's flow, instead, allocate time for questions afterwards.
- Ensure venue setup is completed the day before the meeting, involving all departments, to prevent last-minute chaos.
- Focus feedback presentations exclusively on the topic of discussion, avoiding the introduction of unrelated information.
- Emphasize the importance of ward councillors and ward committee members taking public participation seriously and attending meetings more consistently.
- Organising Ward Committees into groups based on numerical ranges (1-10, 11-20, 21-28) proved effective in promoting orderliness throughout the event.
- The presence of departmental service desks added significant value, and it was well-received by the wards.
- Facilitating inter-departmental engagement provided valuable networking opportunities and collaborative discussions.
- The interaction between ward councillors and various departments was enjoyable and productive for both parties.
- The overall event was successfully executed, indicating its positive outcome and effectiveness.

6.8 Summary of Needs and Priorities

The graph below presents a summary of the key priorities and needs raised by communities during the public participation. It also depicts the priorities identified by community members and range as follows:

The table below indicates which priority areas were raised in the different wards:

Table 56: Priority areas per ward (2022, 2023 and 2024)

Community Need/ Priority	Wards	2022	2023	2024
		Total Wards	Total Wards	Total Wards
Access to Housing	1,5,8,9,10,11,16,17,20,21,22,24,25,27	5	9	14
Area beautification	1,2,4,5,7,11,16,24,27,28	10	10	10
Area Cleaning	1,2,4,5,6,7,10,11,14,17,18,19,20, 21,23, 24,27	21	11	17
Cemetery	1,25,27	2	3	3
Community Hall	6,8,11,16, 20,21	5	5	6
Electricity	11,16,17,18,19,20,21,22,24,26,27,28	24	24	12

Youth	1,7,8,12,16,24,26	7	12	7

Development				
Multi-purpose centre	1,5,16	2	2	3
Food gardens	6,9,20	4	4	3
Go George	1,4,7,14,19,17,20,22,23,24, 26	8	8	11

6.9 Sector Department Priorities

The table below indicates ward priorities submitted by the 28 wards that require either National or Provincial intervention. The municipality has also submitted the priorities to the Garden Route District Municipality as per the Municipal ONE Plan to facilitate Intergovernmental relations engagements.

Table 57: Sector priorities

No Feedback received from Sector Departments			Feedback from Sector Departments
Ward	Priority No	Priority	Sector Feedback
1	1	Housing (Provision of mixed development housing)	Parcels for mixed use residential have been identified in the Human Settlements Plan. Precinct planning will be undertaken, which will include feasibility and assembly of development rights. Funding sources needs to be sought as the area falls outside the PSHDA. Cost for the planning is estimated at R750'000
	2	Public safety (Satellite Police Station (Crime rates high)	Will be escalated to Provincial Government Department of Community Safety
	8	Multi-Purpose Centre (Multi-Purpose Centre for Blanco)	Due to national fiscal situation, no capital funding is available for new projects.
	9	Land and housing (land needed for small farmers)	Will be escalated to the relevant Provincial Department
	10	Paving of street to Kretzenhoop	This is not a public road, but an access street which forms part of Erf 1424, which belongs to Westen Cape: Department of Education (this matter was raised numerous times in previous IDPs as well)
	9	Parking at Blanco Clinic	The upgrade of clinics is a provincial function. They are in the process of planning the upgrades to the facility.
4	3	Improve free Wi-Fi	The public library in Touwsranten has free Wi-Fi for the public, but the library is being upgraded and is closed to the public at the moment. It may possibly be opened to the public from December 2023.
5	5	Multi-Purpose/ Thusong Centre	Due to national fiscal situation, no capital funding is available for new projects
	6	Library	Due to national fiscal situation, no capital funding is available for new projects.
	10	Housing	Will be escalated to the relevant Provincial

No Feedback received from Sector Departments 			Feedback from Sector Departments 
Ward	Priority No	Priority	Sector Feedback
		(housing development protea park)	department
6	6	Asbestos roofs	Programme under consideration by National
	7	Sport and Recreation (Roof Canopy in the Clinic (Community would also like a Day Hospital))	The Allied Health building burnt down at Rosemoor. Rehab services were de-escalated to Conville CDC. In the process of introducing an appointment system to prevent overcrowding. The plan in future is to have a consolidated CDC on the grounds of Harry Comay Hospital but this requires further discussion and investigation.
	8	Mobile clinic	Comprehensive plans for future health services are rendered within this geographical area. There are about 4 clinics within a 3 km radius. Need to determine where a mobile clinic is needed.
7	2	Satellite Police station	Will be escalated to Provincial Government Department of Community Safety
	3	Upgrade of clinic fence	Will be escalated to the Provincial Department
	5	Satellite Fire station	Will be escalated to the District/Provincial Department
	6	library	Due to national fiscal situation, no capital funding is available for new projects.
	10	Satellite Police station	Will be escalated to Provincial Government Department of Community Safety
8	1	Satellite Police Station	Will be escalated to Provincial Government Department of Community Safety
	2	Library with Wi-Fi	Due to national fiscal situation, no capital funding is available for new projects.
9	1	Housing (Rectification of houses for Mbafala Street, Zone 4)	Rectification Programme has been discontinued
10	10	New Crèche	Education does not have a mandate to build / refurbish / maintain creches. Only responsible for the registration of existing and operational ECD centres.
11	1	Housing (RDP houses renovation)	No Programme exists for the renovation of RDP houses
	5	Housing (Upgrade toilet and accommodate disabled)	Provincial funding required
	6	Housing (Asbestos roof to be repaired)	Programme under consideration by National - to replace asbestos roofs
12	1	Clinic	There are already 2 health facilities within Thembaletu (CDC and Clinic in Kuyasa). Need to specify where a clinic is needed. For new clinics to be considered, population development and growth need to be factored in. As well as staffing, facilities and contract management.

No Feedback received from Sector Departments 			Feedback from Sector Departments 
Ward	Priority No	Priority	Sector Feedback
			We encourage the community to either use Thembaletu CDC, Kuyasa Clinic or Lawaai kamp.
	2	Old Age Home and place for handicapped people	Will be escalated to the Provincial Department
	3	Build high school	Nothing on the radar of Education for this area.
13	3	Land for old age home	Will be escalated to the relevant Provincial Department
	4	Redevelop the RDP house and toilets in Zone 3	Rectification Programme has been discontinued
	8	Creche to be built at the Old Post Office	Education does not have a mandate to build / refurbish / maintain creches. Only responsible for the registration of existing and operational ECD centres.
14	5	Satellite fire station	The Pacaltsdorp residential area still falls within the 8-minute response attendance time required by the Fire Service according to the SANS code 10090. The Fire Department is planning an extensive public education programme, focusing on school children and the prevention of Fire Incidents in and around the house. (Programme is awaiting printed material from Provincial government before rolling out during winter months.)
15	6	Change of ownership in houses	A list of outstanding title deeds should be submitted to the Section: Property Management to investigate
16	10	Upgrade Clinic to hospital	Pacaltsdorp clinic through the NHI revitalization grant will receive upgrades and additions to improve service delivery. Contractors are already onsite, and the estimated completion date is September 2024. George Regional Hospital already serves the population of George and performs the function of a level 2 hospital.
17	5	Multipurpose centre	Due to national fiscal situation, no capital funding is available for new projects
	6	Upgrading and Expansion of schools	Conville PS – In progress "Look and Feel Project " Infrastructure - Stage 8. (Awaiting Approval) Not to rebuild of school, but: Replacing the Roof, replace 8 mobile classrooms / upgrade of ablution facilities, etc.
	7	Upgrading and Expansion of Conville Clinic	The plan is to consolidate all the clinics into one CDC on the grounds of Harry Comay Hospital. Further discussions are needed to ensure that the health department can provide comprehensive healthcare services to all its clients within the George geographical area.
	8	Skips	Application submitted to DFFE for MIG Funding to procure skips and yellow plant
	4	Home based care opportunities	Will be escalated to the Provincial Department of

No Feedback received from Sector Departments 			Feedback from Sector Departments 
Ward	Priority No	Priority	Sector Feedback
			Health
20	3	Housing opportunities	Metro Development in progress funding allocated by DoHS
	4	School fence (Heidedal Primary	Planned for 2023/24
21	3	Library	Due to national fiscal situation, no capital funding is available for new projects.
	8	Build rehab centre	Will be escalated to the relevant Provincial Department
	9	Housing toilets in informal settlements	Part of Interim Basic Services planning - funding dependent on PDoHS
	10	Old age home	Will be escalated to the relevant Provincial Department
22	1	Herold Clinic - More operating days/help for Nurse Katrina Maritz Waiting areas: Containers or canopies as waiting areas	Need to factor in the population headcount. This will determine whether the increase operation hours will be increased. The department will investigate the matter and see best how the community can receive the service as well as the containers/canopies. Herold Clinic: Mobile population 2074, town population 1755, therefore 2 days clinic and 3 days mobile are equitable access.
	7	Geelhoutboom – Emergency services	Will be escalated to the Provincial Department of Health
24	4	EPWP (Build multipurpose centre)	Due to national fiscal situation, no capital funding is available for new projects
	9	Sassa Office/ Home Affairs Office/ SARS	Will be escalated to the relevant government departments
	5	Electro-technical services (Electrical boxes for informal settlement)	This will be escalated to Eskom
25	3	Houses Purchase of lands Dr Smook or expropriate with compensation Plot and Plan, BNG housing, Middle class housing Transfer of municipal property in GRDM to GM Rent to own formula	Subject to the approval of the Human Settlements Plan and pipeline
	6	Multipurpose centre Office space for Sassa, Home Affairs, Dept. Labour, DSD (3 days per week). Space for training centre – Purchase of Old FNB Building, R5 MILLION over 3 years)	Due to national fiscal situation, no capital funding is available for new projects.
	9	New cemetery and wall of remembrance (Purchase of new cemetery. Ground. Development of a crematorium and Hall of remembrance - R5 million)	Viable land is still being investigated, the existing Cemetery has space occupied by pig farmers, the space can be used for burials and the farmers can move to the commons.

	5	EMS bus	Will be directed to the relevant Provincial Department
26	10	Old age home	Provincial mandate and will be escalated to the relevant provincial department
27	1	Building of a Centre for our senior citizens in the Europe area as approvals already took place years back	Provincial Mandate and will be escalated to the relevant department
	10	Upgrading of the clinic in Pacaltsdorp	Provincial Mandate and will be escalated to the relevant department

6.10 Ward Priorities

Emanating from the community needs and inputs, the following **10 key priorities per ward** were identified by the ward councillor for the period 2022 – 2027. During the annual IDP review, these key priorities may be reviewed and re-prioritised. Chapter 6 outlines George Municipality's approach to public engagement, shedding light on both capital and operations projects. The initial phase of public participation occurred in October/November 2022, during which each ward had the opportunity to pinpoint 10 capital projects and 10 operations projects. Subsequently, in October 2023, the IDP unit conducted a comprehensive review of these projects, through a public participation open day. The graphs below illustrate the extent of responsiveness to the identified ward projects.

As we embark on this insightful journey through the landscape of Ward Projects and Progress, let us acknowledge the significance of these localized endeavours in shaping the broader tapestry of our city/region. The stories encapsulated herein not only reflect the municipality's commitment to responsive governance but also serve as a compass guiding the municipality's endeavours towards an inclusive, prosperous, and harmonious future for all residents.

Graph 12: Ward Priorities-Implementation of Capital Projects

Graph 13: Ward Priorities-Implementation of Operational Projects

Ward Priorities

Emanating from the community needs and inputs, the following **10 key priorities per ward** was identified by the ward councillor for the period 2022 – 2027. During the annual IDP review, these key priorities may be reviewed and re -prioritized.

													to engage the Ward committee regarding the required land
4	Basic infrastructure services	SO3	Traffic circles need paving	Civil Engineering	Streets and stormwater	Local	😊	Upgrading of roads takes place in consultation with the approved IDP, roads master plan, roads hierarchy (road classification), pavement management system, how many vehicles using the road, available budget, etc. The list of prioritized roads for the 2022/23 financial year are already finalized and implemented. Consideration for the request for resealing and paving of roads will be done during the prioritization of roads for the 2023/2024 financial year.					Site inspection was done, feedback required from Civil Engineering
5	Housing	SO3	Upgrade toilet and accommodate disabled	Planning & Development	Human Settlements	Provincial	😐	Toilets will only be provided if it is not linked to the house or if there is already a toilet in the house. Councillor must provide a list of properties that requires a disabled toilet. The list will be provided to the WCG for funding consideration.					
6	Housing	AO3	Asbestos roof to be repaired	Planning & Development	Human Settlements	Provincial / National	😐	The housing rectification program has been discontinued and thus there is no funding available for the replacement of roofs. Owners are required to maintain their properties and cannot expect that the municipality or the state is going to do this for them. Nonetheless, the Department will investigate all matters submitted by the councillors and submit a funding application to the National Department of Human Settlements for consideration. The Department will also request WCG to undertake Housing Consumer Education drives to remind owners of their responsibilities.					
7	Basic infrastructure	SO3	Sewage and drain needs attention	Civil Engineering	Streets and stormwater	Local	😊		R200 000				Still ongoing problem

6.11 Provincially linked priorities

Provincial and local governments play critical and complementary roles in eliminating poverty and reducing inequality. Provincial health, education and housing functions support the development of healthy communities and lay the foundations for faster economic growth. Municipalities deliver basic services such as water, electricity, sanitation and solid waste removal. Both provinces and municipalities manage extensive public road networks, and support or provide public transport services. They also directly manage aspects of planning and regulatory systems that control land use, influence infrastructure rollout and facilitate economic activity.

Table 58: Provincially linked priorities

Sector	Priority/Issue	Description	Ward/Area
Education	More Schools	Schools in these areas are overcrowded	Ward 6: Rosemoor Ward 19: George
	School Bus	Provision of a school bus service for Kleinkrantz	Ward 4: Kleinkrantz
	Primary School	Building of Primary School	Ward 12: Themba lethu Ward 14: Rosedale Ward 15: Themba lethu
	High School	Building of High School	Ward 21: Themba lethu
Social Development	Old Age Home	<ul style="list-style-type: none"> Support for the aged and possible building of old age homes in these areas Facilities for the Old Age 	Ward 8: Parkdene Ward 21: Silvertown Ward 24: Haarlem Ward 27: Pacaltsdorp Ward 17: Conville

	Assistance to Small Businesses	Training and financial support	Ward 4: Wilderness Heights Ward 12: Thembaletu
Economic Development	Proper business accommodation	Provision of formalised business accommodation	Ward 7: Lawaai kamp

6.12 Sector Investment

Over the past few years, the Western Cape Province has explored ways of fostering intergovernmental planning and implementation. This process has evolved and is now set to enable the implementation of the NDP, on the one hand, and to enhance the development and implementation of the Provincial Strategic Plan, on the other. Planning in the Western Cape Province has matured to a phase where joint planning and implementation is a fundamental element in ensuring sustainable and integrated service delivery.

6.13 Department of Health

The Department of Health has prioritised the following Four(4) Areas:

- Expand the principle of 'Community Orientated Primary Care' (COPC) throughout the district;
- Strengthening of multi-sectoral partnerships: WOSA (Planet Youth);
- Focus on improving the patient experience of care; and
- (Implementation of Compliments and Complaints pp)

The following are also priorities for hospitals:

- Improvement in 'Ideal Hospital' outcomes (Office of Health Standards Compliance);
- Consolidation of outreach support of specialists from George Hospital to sub-districts;
- Ensure Emergency Centres are fully capacitated and functional;
- Support EMS and HealthNet transport initiatives; and
- Implementation of 'Principles for Safe Obstetric Services' to reduce maternal mortality.

The health Programmes interventions for the 2023/24 include:

1. First 1000 days of life

- (Family Planning, Ante-natal services, Obstetric services, Immunization & Nutrition)
- Comprehensive package of care for Mother, Baby & Family from Conception to 2 years
- Community Health Workers walking the health journey with the family
- Paediatric Surge season surveillance- Whole of Society Approach needed.

2. Clinical Governance

- Development of Clinical Governance strengthening framework for the George ecosystem
- Connect Collaborate Co-create

3. Chronic Disease Management

- Priority focus on Diabetes
- Clinical governance led by Family Physicians in collaboration with the multi-disciplinary team
- Using data information systems, identify healthcare users with raised HBA1c for targeted intervention
- Screening according to Western Cape Department of Health and Wellness guidelines

4. HIV/ TB Program

- Increase access to HIV testing and self-testing
- ART long-term retention of care
- Improving data input to inform quality improvement plan
- Focus on clinical mentorship and governance
- New funding cycle NPO partners. Includes revised training module and service package

- Improving data input to inform quality improvement plan
- Strengthening of linkage to care to address defaulting of care

5. Mental Health Program

- Planet Youth Programme rollout

Table 62: Infrastructure Projects

NHI Projects

The National Department of Health (NDoH) worked with the Provincial Department (PD) of Health to identify facilities which required refurbishments and upgrades.

Table 63: NHI Projects

Project Name	Estimated Budget	Estimated Practical completion date
Blanco Clinic and *Rosemoor Clinic	R11 337 570	January 2025
Parkdene Clinic and Pacaltsdorp Clinic	R20 702 262.58	January 2025

Capital Projects

George Road Satellite Clinic will be done by the Department of Health in partnership with the Department of Transport and Public Works. Awaiting further communication regarding the budget and scope of work to be done.

Phase 1 of the inverter project saw 12 clinics being assisted and completed. These clinics are Slangrivier Clinic, Eyethu Clinic, George Centrum Clinic, Amalienstein Clinic, Asla Clinic, Bongoletu Clinic, Great Brak River Clinic, Knysna Town Clinic, Kuyasa Clinic, New Horizons Clinic, Zoar Clinic and Oudtshoorn Clinic.

6.14 Department of Education (Physical Resource Planning and Property Management)

Emerging issues can be summarised as follows:

- Inadequate preparedness/capacity of school management structures to identify/cater for management of physical resources allocated to schools;
- Inadequacies relating to basic competencies and understanding of concepts which negatively impact on condition of infrastructure;
- Inadequate skills required to observe, report and/or act appropriately and effectively upon maintenance matters;

Ineffective communication between stakeholders. Focus ahead:

- Ensure effective school janitor development and support;
- Protect/preserve learning and teaching spaces;
- Enhance accountability at all levels: principals as managers/custodians of infrastructural assets, etc.
- Ensure that infrastructure receives priority;

Discuss, design and implement a tool to monitor institutional maintenance. Projects:

- Mobile allocation;
- New Schools;
- Replacement Schools;
- Scheduled Maintenance;
- Upgrading/Additions;
- Expansion Classrooms;
- Grade R Classrooms.

6.17 Plans of the Departments of Social Development

The core functions of the Department of Social Services are as follows:

- A social welfare service to the poor and vulnerable in partnership with government stakeholders;
- A community development service that provides sustainable development programmes, which facilitate the empowerment of communities, and these are delivered through eight (8) programmes.

Table 66: Department of Social Services Programme Budget

Garden Route	Programme Budget R '000	George Municipality Programme Budget R' 000

6.20 Department of Community Safety

The Department of Community Safety assists the Municipality with varied initiatives such as the Chrysalis Development Programme. It entails the enhancement of the programme by linking graduates to the EPWP work placement with a focus on safety. The programme, through this learning, aims to contribute to youth development through the promotion of social consciousness, values and attitudes -in young people between the ages of 17-22. The focus of this programme is to enable them to grow on a personal level and acquire knowledge and skills through training aimed at empowering them economically, morally and spiritually. Youth who have gone through the programme are placed to gain valuable work exposure in the Municipality.

6.22 Department of Cultural Affairs and Sport

The planned contributions regarding Library and Archive Services for the Touwsrante Modular Library and Records Management and Records Management Audit.

Further Contributions are:

- Sports Development - Cares/ Shared Complex (1 site)
- School Sport (7 Sites)
- MOD Centres (3 Sites)
- Afterschool Programme- 1000 Stories Library Reading (17 Sites)
- Academic support (10 Sites)
- ICT Yeboneers (6 Sites)
- Sports Promotion -Recreation: Early Childhood Development, Indigenous Games Senior Citizen

Table 74: Department of Cultural Affairs and Sport Additional Support

Name of Training Intervention	Purpose	Relevant Officials
Western Cape Library Service Seminar	Library Service conducts a seminar on an annual basis to discuss issues about the National Community Library Services Conditional Grant and the Provincial Municipal Replacement Funding for most vulnerable municipalities. The purpose of the seminar is to enhance the intergovernmental relations between National, Provincial and Local Governments and to discuss and workshop the approach for the 2022/2023 financial year. Representatives from the 25 municipalities will be attending and will be capacitated on various aspects of these funding sources, including planning, implementation, and reporting	Municipal Managers, Municipal Library Managers, Municipal Library Staff
Literacy webinar	The Literacy webinars present motivation, ideas and best practices to encourage libraries to present programmes that encourage and support reading ability and a reading culture in libraries and communities	Municipal Library Managers Librarians Library Assistants
Creating a Reading Culture training	Training on how to create or stimulate a reading culture where there is none	Municipal library staff
Library Manager meeting	The Library Service hosts a virtual meeting for Library Managers from all the municipalities in the Western Cape with e.g. presentations from academics, NGO's, library-specific businesses or Departments on trends, new technology, opportunities, and vision or trend-setting information.	Municipal Library Managers
Story Hours	Training on how to plan and do story hours with children	Municipal Library staff
List Management	Training on how to use Excel and the Library Information Management System on how to administrate assets by creating lists.	Municipal Library staff
Library Forums	These forums are attended by representatives from libraries and contain presentations, training and discussions on library-specific functions	All Library Staff based at the municipal library
Workshop on the Customary Initiation Act (Act 2 of 2021)	Engagement with municipalities regarding the Customary Initiation Act and their responsibilities regarding Cultural Initiation.	Directors Social Development and Property
Registry Clerks Course	To equip registry staff to provide a registry and record management service for their institutions	Registry Clerks; All staff working on the creation of records
Records	To equip records managers for their records management responsibilities in terms of the	Records

Name of Training Intervention	Purpose	Relevant Officials
Management Course	Provincial Archives and Records Service of the Western Cape Act, 2005	Managers, and senior staff members who create records/information
Electronic Records Management Course	To introduce the basics of electronic records and electronic records management systems to all governmental bodies and to promote electronic records management practices in line with legislation.	Registry Clerks, Records Managers, and all staff working in the creation of records electronically

Table 75: Additional programmes run by DCAS:

DCAS Workstream	DCAS Activity in the Municipality
Preserving, protecting and promoting heritage and culture	<p>Art and Culture: Workshop on the Customary Initiation Act (Act 2 of 2021). 6.27 Department of Agriculture

The Western Cape Department of Agriculture (WCDOA) derives its Constitutional mandate largely from Section 104 (1) (b) of the South African Constitution (Act 108 of 1996) which conveys the power to provinces to pass legislation on any functionality listed in schedules 4A (concurrent) and 5A (exclusive provincial).

Concurrent functions include:

- Agriculture,
- Animal and disease control,
- Disaster management,
- Environment,
- Regional planning,
- Soil conservation,
- Trade,
- Tourism as well as
- Urban and rural development.

Exclusive provincial mandates include provincial planning, abattoirs and veterinary services.

The support available to Municipalities:

- Sustainable Resource Use Management (SRUM)-Agricultural Engineering Services, LandCare, Land Use Management, Disaster Risk Reduction
- Agricultural Producer Support and Development (APSD)-Producer support services, Extension & Advisory Services, Food Security
- Veterinary Services-Animal Health, Veterinary Public Health (Food Safety), Veterinary Laboratory and Export Control
- Research and Technology Development Services (RTDS)-Agricultural Research, Technology Transfer Services
- Agricultural Economic Services (AES)-Production economics and Marketing support, Agro-processing support, Macroeconomics support.
- Agricultural Education and Training-Higher Education and Training, Agricultural Skills Development
- Rural Development-Rural Development Coordination, Social Facilitation, Farmworker Development

Table 83: Other support

Municipal Area	Information/aspect or issue to be shared, even an area in which a department needs support from a municipality/district
All municipalities in the Western Cape	Reminded about the Cape Farm Mapper and the Weather application which the Department provides to all municipalities and citizens of the Western Cape. Free of charge to access information whenever needed.
8 state Veterinarian offices spread throughout the Province. (Garden Route Veterinarian offices situated in George and Oudtshoorn)	Rendering animal health support and disease management / control to livestock owners. They facilitate rendering clinical services to some areas challenged with access to veterinary services. They periodically participate in spay campaigns aimed towards sterilization of dogs/cats.
Veterinary Public Health Officers [aka Meat Inspectors] spread throughout the Province.	They render interventions promoting Food Safety. Tasks may involve approval, registration and inspection of abattoirs.

CHAPTER 7: Financial Plan

Chapter 5 Section 26 of the Local Government Municipal Systems Act 32 of 2000 prescribes the core components of the Integrated Development Plan. Section 26(h) of the abovementioned Act requires the inclusion of a financial plan, which should include a budget projection for at least the next three years. This financial plan aims to determine the financial affordability and sustainability levels of George Municipality over the medium term.

A municipality's financial plan integrates the financial relationships of various revenue and expenditure streams to give effect to the Integrated Development Plan (IDP). It provides guidance for the development of current budgets and assesses financial impacts on outer years' budgets by incorporating capital expenditure outcomes, operating expenditure trends, optimal asset management plans and the consequential impact on rates, tariffs, and other service charges.

Chapter 5 Section 26 of the Local Government Municipal Systems Act 32 of 2000 prescribes the core components.

7.1 Introduction

According to the Municipal Budget and Reporting Regulations (MBRR) of the National Treasury, budgets are only required to cover the planning period of the next fiscal year and the two succeeding outer fiscal years, also known as the Medium-Term Revenue and Expenditure Framework or MTREF period. However, the Long-Term Financial Plan also covers important budget areas over the next 10 financial years.

The discussion of Pre-Determined Objectives (PDOs), which include a financial framework, financial strategies, financial policies, budget assumptions, operating revenue, operating expenditure, capital expenditure, capital expenditure funding, the Prioritization Model for Capital Asset Investment, long-term financial sustainability ratios, and a concluding statement, will now take place.

A significant risk to the South African economy remains the ongoing problems with Eskom's operations that continue to disrupt the supply of electricity to households and businesses also known as rolling blackouts or load shedding. In addition to the major issue are the following external Influences:

- Unforeseen political and economic changes
- Interest rate fluctuations;
- Localised economic growth;
- Residential developments and new business initiatives;
- The Consumer Price Index;
- Changes in levels of grant funding;
- Changes to tariffs and levies and their conditions (e.g. Eskom bulk tariff increases);
- Availability of essential resources such as fuel, electricity and water;
- Changes in community needs and expectations;
- Legislative changes; and
- Economic changes due to health disasters. International instability, e.g. wars and pandemics;

Climatic changes contributing to flooding; wildfires and droughts.

There are also internal Influences – items that the Municipality can control, such as:

- Agreed service level review outcomes;
- Infrastructure asset management;
- Rates and other tariff increases (other than electricity prices);
- Performance management;
- Efficiencies in service delivery and administrative support; and
- Salaries and wages (vacancy rate).

Updated Perspectives (Demographic, Economic, Household Infrastructure)

7.2 Demography

George Municipality is the economic hub of the Garden Route District. As such, it is no surprise that George is the most populous municipality in the district, with a total population of 238 533 people representing approximately 34.10% of the Garden Route District population. Population growth in 2023 came in at 1.50. The 5-year average population growth rate came in at a reasonably high 1.54% p.a. Any increase in the population places added pressure on the municipality and its infrastructure to deliver services to it's communities.

Total Population

Averaged household income increased by 3.8% during 2023, to a total of R382 734 p.a. This is broadly in line with the Western Cape Province figure of R383 172 p.a. and above the Garden Route District figure of R376 935 p.a. According to the latest S&P Global Market Intelligence update, 15.7% of households in George earn less than R54 000 p.a., placing them below the equitable share bracket. This is marginally below the district average of 16.4%. The number of households that fall below the equitable share bracket is indicative of the number of indigent households in the municipal area and reflect those who qualify for and/or are largely reliant on

government grants as a source of income. The provision of RDP level of basic services to these households is theoretically covered by the equitable share and should compensate the municipality for providing free basic services. 91.3% of households in the municipality receive a level of service above the RDP level, an improvement on the Garden Route District figure of 90.2%.

Household Income Distribution

While positive signs of a recovering economy were observed post-Covid, 2023 saw a return to a contracting local economy in George. This is likely a product of a high inflationary environment and consequently sustained high interest rates which have created a challenging economic environment for all. Households are under severe pressure to make ends meet as well as to service their municipal bill as wage increases battle to keep pace with the rising cost of living. Thus, the extent to which households can be levied in future must be closely monitored. A decline in household income coupled with rising costs of municipal services may erode the municipality's revenue base and create a significant revenue risk in the future.

Economically active people as % of the total population

7.3 Operating Budget Estimates

A municipality is a non-profit organisation, thus after paying for regular operating expenditures, contributing to the various funds and reserves, it should break even. Both the user-pay concept and the full cost recovery principle are used in the structure of rates and tariffs. It should be emphasised that the accumulated accounting surplus is not a cash-backed fund, because it is determined using the accrual method of accounting as prescribed the Generally Recognised Accounting Practice (GRAP).

7.4 Total Income vs Total Expenditure

	2017	2018	2019	2020	2021	2022	2023	2024
Total Income	1 683.3	1 962.7	2 010.1	2 084.7	2 297.0	2 622.1	3 570.4	4 825.5
Total Operating Expenditure	1 618.4	1 787.9	1 915.7	2 020.4	2 230.0	2 390.7	2 948.8	3 726.7
Operating Income (excl Cond Grants)	1 328.8	1 479.9	1 638.1	1 705.2	1 785.7	2 007.5	2 989.7	3 709.5

Total income increased by 29% from R3 570.4 million in FY2023 to R4 825.5 million in FY2024. Total operating expenditure increased by 26% from R2 948.8 million to R3 726.7 million over the same period. This resulted in an accounting surplus of R1 098.7 million for FY2024 up from R621.6 million realised in FY2023. George LM continued to generate cash from operations of R1 357 million. This is due to the maintenance of a high collection rate over the review period and has contributed to the maintenance of a healthy liquidity position throughout the period. Additionally, this has enabled the municipality to consistently service a capital replacement reserve, from which the municipality has been able to employ a significant amount of cash reserves to fund capital expenditure.

Income per source

The improvement in financial performance was underpinned by strong revenue growth and successful cost containment. This is evidenced by growth in operating income (excluding conditional grants) of 12.9% exceeding growth in operating income of 10.9%. The growth in operating income was underpinned by above CPI growth in electricity services (19%), property rates (15%) and interest received (63%). The growth in electricity services revenue is positive to note as this follows a decline in the previous year due to the energy crisis. Electricity revenue remained the predominant contributor to revenue, accounting for 31% of revenue in FY2023/24. Other notable contributions include property rates (15%) and conditional operating grants (16%).

Total grants (operating and capital) comprised 35% of total revenue during FY2023/24. This is indicative of a reasonably high reliance on grant funding, relative to other comparable municipalities. This is, however, largely driven by an increase in capital grant funding earmarked for certain projects such as water and transport infrastructure, in recent years. Analysis of the Capital Budget indicates that a return closer to historic levels of grant funding is expected in FY2025/26. This should bring the total grants to total revenue ratio down closer to historic levels.

While the end of the extended and sustained period of load shedding has certainly been a welcome development, there remains the possibility of the energy crisis rearing its head once again. With this in mind, there remains a risk to the municipality's revenue prospects should this occur, due to the municipality's reasonably high reliance on electricity services revenue. In order to mitigate this risk, the municipality must work towards maximising revenue from alternative sources and more importantly, maintain stringent management of operating expenditure, over which the municipality has an element of control. Cost-savings must be realised wherever possible. Furthermore, the need for tariff increases to reflect the true cost of supply remains critical. It is recommended that the municipality undergoes a detailed tariff assessment, underpinned by a sophisticated

tariff model to assist in determining the true cost of supply of municipal services and that tariff increases are informed accordingly.

7.5 Operating Budget

Figure 48: Operating Expenditure allocation per department

The 10.9% increase in total operating expenditure was underpinned by increases in electricity bulk purchases (20%), depreciation (21%), contracted services (10%) and staff costs (6%). The improved collection rate resulted in debt impairment costs declining during the year. Electricity bulk purchases and contracted services, both with contributions of 18% to operating expenditure, overtook staff costs (17%) as the predominant expenditure items.

While the contribution of staff costs remains well below the maximum norm of 40% as prescribed by NT, this is influenced by the extent of outsourcing of services by the municipality. The outsourcing of transport services related to the GIPTN Bus Service accounted for R289.1 million of the total outlay on contracted services of R731.4 million in FY2023/24. Contracted services are often seen as an alternative to staff costs. With this in mind, it is worth analysing the combined contribution of staff costs and contracted services to assess the affordability of the municipality's employee related expenditure profile. The combined contribution of contracted services and staff costs totals 35% of total operating expenditure. This remains affordable. It may be worth exploring whether certain outsourced services could perhaps be brought back within the municipality, should this result in cost-savings.

Expenditure to repair and maintain the municipality's asset base declined during the year to R223.7 million, down from R234.2 million in the prior year. This resulted in repairs and maintenance expenditure as a percentage of PPE & IP declining to 4.7% from 5.8% in the prior year. Ideally, we would like to see this ratio increase closer to the NT norm of 8%, the accelerated capital investment programme in recent years has resulted in an increase of 37.3% in the carrying value of PPE & IP since FYE2021/22. For additional context the prior 3 years saw growth of 9.8%. Furthermore, it is worth noting that a considerable portion of the Capital Budget is allocated towards the upgrading of existing assets. With this in mind, the municipality's infrastructure and asset base is likely to remain in a healthy state for the foreseeable future.

Electricity distribution losses remained stable at 8.60%, a negligible increase from 8.52% in the prior year. This remains within the NT norm range of 7%-10%. Water distribution losses declined to 20.78%, down from 27.22% in the prior year. This was undoubtedly influenced by the recent upgrades to the municipality's water infrastructure. It is positive to note that tangible returns on the municipality's investments are already being realised.

7.7 Financial Policies

For the effective and efficient financial management of the municipality, all role-players, inclusive of the municipal councillors, must provide an environment conducive to good management. Local government legislation and National Treasury circulars articulate and provide regulatory structure. Council and officials define this environment by developing and accepting policy guidelines to govern financial decision-making and fiscal discipline.

The management arrangements of the Municipality are reflected in the policy documents listed in the table below.

Document	Purpose	Rating
Customer Care, Credit Control and Debt Collection Policy	<p>To provide a framework within which the Municipality can exercise its executive and legislative authority with regards to credit control and debt collection;</p> <p>To ensure that all monies and deposits due and payable to the Municipality are collected and used to deliver services in the best interest of the community; residents and customers; and, in a financially sustainable manner;</p> <p>To provide a framework for customer care;</p> <p>To describe credit control measures and sequence of events;</p> <p>To outline debt collection procedures and mechanisms;</p> <p>To set realistic targets for debt collecting.</p>	2

Document	Purpose	Rating
Indigent Policy	<p>The purpose of the Indigent Policy is to:</p> <p>Provide funding/subsidy for basic service charges to the needy, or qualifying indigent households in a sustainable manner, within the financial and administrative capacity of the Municipality;</p> <p>Provide procedures and guidelines for the subsidisation of basic service charges to indigent households, using the equitable share allocation, received from National Government and other budgetary provisions; and</p> <p>Ensure affordability by subsidising tariffs calculated in terms of the municipality's Tariff Policy and by setting appropriate service levels in accordance with the municipality's service delivery plan.</p> <p>Ensure that the Municipality recognises that many residents cannot afford the cost of full provision of services and for this reason, the Municipality will endeavour to ensure affordability through:</p> <p>Setting tariffs in terms of the Municipality's Tariff Policy, which will balance the economic viability of continued service delivery; and</p> <p>Determining appropriate service levels.</p>	2
Tariff Policy	<p>This policy aims to ensure that:</p> <p>The provisions of section 74 of the Act on Municipal Systems (Act 32 of 2000) are complied with;</p> <p>The tariffs are realistic and affordable;</p> <p>To prescribe procedures for calculating tariffs where the municipality wishes to appoint service providers in terms of section 76(b) of the Systems Act (Act 32 of 2000).</p>	2
Property Rates Policy	<p>The Property Rates Policy and property rates imposed by the Municipal Council are and shall be based on the guiding principles of equity, affordability, poverty alleviation, social and economic development, financial sustainability and cost efficiency.</p>	2
Cost Containment Policy	<p>The purpose of this policy is to direct the Municipality on cost containment measures that must be implemented to ensure that the resources of the Municipality are used effectively, efficiently and economically.</p>	2
Supply Chain Management Policy	<p>To have and implement a Supply Chain Management Policy that gives effect to and complies with:</p> <p>Section 217 of the Constitution; and</p> <p>Part 1 of Chapter 11 and other applicable provisions of the Act.</p> <p>Is fair, equitable, transparent, competitive and cost-effective.</p>	2

Document	Purpose	Rating
Budget Implementation and Monitoring Policy	<p>The objective of the budget policy is to set out:</p> <p>The principles which the municipality will follow in preparing each medium-term revenue and expenditure framework budget (MTREF);</p> <p>The responsibilities of the mayor, the accounting officer, the chief financial officer and other senior managers in compiling the budget;</p> <p>To control and inform the basis, format and information included in the Budget documentation;</p>	2
Funding, Borrowing and Reserves Policy	<p>This policy aims to:</p> <p>Ensure that the Municipality has sufficient and cost-effective funding sources in order to achieve its objectives through the implementation of its operating and capital budget.</p> <p>Set standards and guidelines towards ensuring financial viability over both the short- and long.</p>	2
Cash Management and Investment Policy	<p>This policy aims to ensure that the investment of surplus funds forms part of the financial management procedures of the George Municipality and to ensure that prudent cash management and investment procedures are applied consistently.</p>	2
Travel and Subsistence Policy	<p>The purpose of this policy is to lay down general rules for the payment of subsistence and travelling allowances or costs for the attendance of approved events outside the Municipal area of George.</p>	2
Accounting Policy	<p>The purpose of the accounting policy is to state that the annual financial statements have been prepared in accordance with the Municipal Finance Management Act (MFMA) and effective Standards of Generally Recognised Accounting Practice (GRAP) including any interpretations, guidelines and directives issued by the Accounting Standards Board in accordance with Section</p>	2
Asset Management Policy	<p>This policy is aimed at assisting management and employees of the municipality to implement and maintain consistent, effective and efficient asset management principles.</p> <p>The objective of this policy is:</p> <p>To safeguard the fixed assets of the municipality and to ensure the effective use of existing resources</p>	2
Liquidity Policy	<p>This policy provides guidance on the determination of the minimum liquidity requirement and the calculation of the liquidity available in George Municipality from time to time.</p>	2

<p>Virement Policy</p>	<p>This policy aims to provide guidelines to senior management in the use of virements as a mechanism in their day-to-day management of their budgets. In addition, it specifically aims to empower senior managers with an efficient financial – and budgetary system to ensure optimum service delivery within the current legislative framework of the MFMA and the Municipality’s system of delegations.</p>	<p>2</p>
-------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------

7.8 Financial Strategies

George’s financial performance improved during FY2023/24, with an operating surplus (excluding capital grants) of R32.1 million posted (FY2022/23: R0.6 million). The strong ability to generate cash from operations continued in FY2023/24, with R792.7 million in cash generated by operations (excluding capital grants). This was underpinned by an improved collection rate (93.6% vs 92.0% in the prior year) as well as the improved financial performance.

Electricity services revenue remained the predominant income contributor in FY2023/24, accounting for 31% of revenue in the current year. Electricity services revenue rebounded from the load shedding induced decline observed in FY2022/23. Other notable revenue streams include property rates and conditional operating grants.

Looking at expenditure, electricity bulk purchases (18%), contracted services (18%) and staff costs (17%) were the main expenditure items during FY2023/24. The combined contribution of staff costs and contracted services totalled 35%, remaining below the maximum NT norm of 40%. This is indicative of an affordable employee related expenditure profile. Repairs and maintenance expenditure was reduced from the prior year, down to 4.7% of PPE & IP from 5.9% in the prior year.

Capital expenditure has increased rapidly since FY2021/22, owing to the water and transport projects that are underway or nearing completion. This continued in FY2023/24 with the capital outlay of R948.5 million a high for the review period. This was partly funded by an additional loan to the value of R215.9 million. This added notable leverage to the debt profile, with the gearing and debt service to total expense ratios of 16.8% and 4.7% respectively marked increases from the prior year. The debt profile remains affordable at current levels. However, the extent of borrowing included in the capital budget is forecast to prove unaffordable.

George has maintained healthy liquidity levels throughout the review period, although a declining trend has been observed in recent years. This has coincided with large balances of unspent grants at year end. These funds have by and large been rolled over, but this has resulted in the liquidity ratios appearing worse than they actually are. For instance, upon the removal of the unspent grants balance from current assets and current

liabilities, the FYE2023/24 liquidity ratio of 1.34:1 improves to 1.78:1, a far truer reflection. The strength of the liquidity position is further emphasised by the posting of cash surpluses above the minimum liquidity requirements throughout the review period.

Strengths

- Strong financial performance.
- Affordable debt profile.
- Ability to generate substantial cash from operations.
- Consistent cash surpluses above minimum liquidity requirements.

Weaknesses

Sizable increase in creditors during FY2023/24.

Highlights from the 2023/24 FY:

- George's liquidity position is reasonably healthy with a ratio of 1.34:1 as at FYE2023/24; although a decline from 1.46:1 as at FYE2022/23. This is somewhat misleading as it is heavily impacted by the unspent conditional grants balance of R757.3 million. Upon the removal of unspent conditional grants from current assets and current liabilities, the ratio improves to 1.78:1. This adjusted ratio more accurately reflects the true nature of the municipality's liquidity position.
- An operating surplus (excluding capital grants) of R32.1 million was posted in FY2023/24; following a surplus of R0.6 million in the prior year. Improved revenue from electricity services owing to reduced load shedding assisted in this regard.
- Cash generated from operations (excluding capital grants) increased to R792.7 million during FY2023/24. This was underpinned by the improved collection rate of 93.6%, up from 92.0% in the prior year.
- Electricity distribution losses remained stable at 8.60%, up from 8.52% in the prior year. Water distribution losses reduced markedly to 20.78% from 27.22% in the prior year, likely due to water infrastructure upgrades.
- The municipality's unencumbered cash and cash equivalents of R1.35 billion exceeded the NT and statutory minimum liquidity requirements of R1.10 billion - resulting in a cash surplus of R251.5 million. George has posted cash surpluses throughout the review period.
- Gearing and debt-service to total operating expenditure ratios were 16.8% and 4.7%, respectively, providing scope for additional borrowing to fund capital expenditure. This must be closely monitored though.
- Repairs and maintenance expenditure as a percentage of PPE & IP reduced to 4.7% during FY2023/24, down from 5.8% in the prior year.
- Creditors increased to R363.0 million, up from R258.1 million in the prior year. R217.6 million of this includes trade payables, which increased by R71.0 million during FY2023/24 and contributed to the reduced liquidity ratio.

Based on the results of the LTFM it is recommended that George:

- Maintain an optimised funding mix that strikes a balance between the utilisation of external borrowings and

own cash as a supplement to capital grant funding. It is recommended that the Adjustment Capital Budget borrowing programme is revised downwards as the model outcomes suggest the level of debt will be unsustainable. It is recommended that the borrowing programme is reduced and that a more staggered approach to borrowing is undertaken in order to maintain the debt indicators at affordable levels as well as to take advantage of the interest rate cutting cycle.

- Maintain a balanced approach for the long-term capital investment programme which prioritises investments that contribute to economic growth and revenue generation and prioritise timeous investment in bulk infrastructure. Returns are already being realised on the water infrastructure projects in the form of reduced distribution losses. It is recommended that the capital prioritisation programme is informed by the affordable envelope presented in this report. The outcome of this programme should then be run through the LTFM as a scenario.
- Review the extent of the acceleration of capital expenditure included in the Adjustment Capital Budget, particularly in FY2024/25. Long-term sustainability must be prioritised. The model outcomes suggest the Adjustment Capital Budget will result in a notable deterioration of liquidity. It is thus recommended that in the absence of increased grant funding, the capital investment programme is revised downwards, in accordance with the Base Case assumptions.
- Working capital management, particularly payment of creditors, must be strengthened. The increase in creditors observed during FY2023/24 cannot become a trend. The municipality must maintain timeous payment of creditors. Additionally, the improving trend in financial performance must be continued. Revenue must be maximised and cost-containment strategies implemented with cost-savings realised wherever possible. Maintaining low distribution losses is critical for ensuring service charges revenue is maximised.
- Prevent a deterioration of the collection rate through the implementation of measures such as strict credit control, debt collection procedures etc. A collection rate in excess of 96% must be maintained at a minimum, with further improvements targeted.
- Institutionalise the utilisation of a sophisticated tariff model to ensure that tariffs reflect the true cost of delivering the service, on an organisation-wide approach (also taking into account property rates and organisational overheads).
- Update the long-term financial plan annually with the most recent information to remain a relevant and valuable strategic tool that serves as input to the annual budgeting process. Continue the ongoing utilisation of the long-term financial model to support strategic financial decision-making in the municipality.

7.9 Medium–Term Capital Expenditure per Strategic Focus Area

The proposed capital expenditure per strategic focus area over the medium term is illustrated in the table below:

Capital Expenditure per Strategic Focus Area

Strategic Goal	Year 1 2025/26 Final Budget	Year 2 2026/27 Final Budget	Year 3 2027/28 Final Budget

7.12 National and Provincial Investment

George Municipality still finds itself in a vulnerable financial position, constantly having to manage itself past deficiencies and inappropriate financial management decisions towards a position of financial viability and sustainability.

The municipality's business and service-delivery priorities were reviewed as part of the year's planning and budgeting process. Where appropriate, funds were transferred to address crucial service-delivery needs and to ensure compliance with legislative requirements and to meet service-delivery obligations. The current year adjustment budget is reflective of this principle and supports the municipality's quest for financial sustainability. The main challenges experienced during the compilation of the 2025/26 MTREF can be summarized as follows:

- National Treasury projects a real economic growth of 1.1 per cent in 2024. Real GDP growth is expected to moderate to 1.8 per cent over the next three years. (MFMA Circular No.129).
- Although George Municipality received the budget facility for infrastructure grant (BFI) allocation of R1.1 billion rand in the previous MTREF for the upgrading of the bulk water services, the need for the upgrading and rehabilitation of the other core services infrastructure remains high. This demand is clearly visible in the draft capital budget.
- Headline inflation is expected to remain between 4.4 to 4.5 per cent target range over the 2025/26 MTREF. (MFMA Circular No. 129).
- The addressing of service delivery shortcomings as identified in the adjustments budget in February 2025 and its effect on the available funding.
- The continued funding constraints with regards to the low available funding for the Capital Budget through the Capital Replacement Reserve (CRR) and the ability to take up loans to meet the demand for upgrading and replacing of infrastructure.
- The development of the Capital Expenditure Framework (CEF) will assist in guiding the municipality in prioritizing the capital budget in line with the Spatial Development Framework (SDF), Long Term Financial Plan (LTFP) etc.

The following tables depict the National and Provincial allocations to the municipality over the 2025/26 MTREF period. It should be noted that the information is subject to change depending on fiscal constraints and the availability of resources.

CHAPTER 8:

Organisational Scorecard (5 – years)

8.1 Introduction

The Integrated Development Plan enables the achievement of the planning stage of performance management. Performance management then fulfils the implementation, management, monitoring and evaluation of the Integrated Development Plan. The performance of an organisation is integrally linked to that of its staff. It is therefore vitally important for any organisation to periodically review its own performance as well as that of its employees. A performance-orientated organisation is one in which vital indications of performance are generated automatically, as part of the management systems that are used by all managers in their day-to-day management activities.

8.2 Performance Framework

Regulation 7(1) of the Local Government: Municipal Planning and Performance Management Regulations, 2001 states that “A Municipality’s Performance Management System (PMS) entails a framework that describes and represents how the municipality’s cycle and processes of performance planning, monitoring, measurement, review, reporting and improvement will be conducted, organized and managed, including determining the roles of the different role players.” This framework, inter alia, reflects the linkage between the Integrated Development Plan (IDP), Budget, SDBIP and individual and service provider performance. The Municipal Council adopted a Performance Management Framework on 26 October 2011 and was subsequently reviewed on 12 February 2022.

8.3 Performance Management System

The Performance Management System implemented at the municipality is intended to provide a comprehensive, step by step planning system that helps the municipality to manage the process of performance planning and measurement effectively. The PM System serves as primary mechanism to monitor, review and improve the implementation of the municipality IDP and eventually the budget. The performance management policy framework was approved by Council which provided for performance implementation, monitoring and evaluation at organisational and individual levels

8.4 Organisational Performance

The organisational performance of the municipality is evaluated by means of a municipal scorecard (Top Layer SDBIP) at organisational level and through the service delivery budget implementation plan (SDBIP) at directorate and departmental levels. The Top Layer SDBIP set out consolidated service delivery targets and provides an overall picture of performance for the municipality reflecting performance on its strategic priorities.

The departmental SDBIP captures the performance of each defined department which reflects on the strategic priorities of the municipality. The SDBIP provides the detail of each outcome for which the senior management is responsible for, in other words a comprehensive picture of the performance of each directorate/sub-directorate.

8.5 Individual Performance (s56/57 employees)

The municipality has implemented a performance management system for all its senior managers. This has led to a specific focus on service delivery and means that:

- Each manager must develop a scorecard which is based on the balanced scorecard model.
- At the beginning of each financial year all the senior managers (Section 57 employees) sign Performance Agreements.

8.6 Individual Performance

Section 38 (a) of the Local Government: Municipal Systems Act, No. 32 of 2000 requires Municipalities to set appropriate key performance indicators as a yardstick for measuring performance, including outcomes and impact, with regards to the community development priorities and objectives set out in its Integrated Development Plan. Section 9 (1) of the Regulations to this Act maintains in this regard, that a Municipality must set key performance indicators, including input indicators, output indicators and outcome indicators in respect of each of the development priorities and objectives.

Every year, as required by Section 12 (1) of the Regulations to the Systems Act, the Municipality also set performance targets for each of the key performance indicators. The IDP process and the performance management process are therefore seamlessly integrated.

The Municipality has embarked upon a process to cascade performance management to all levels in the organisation. A phase in approach is followed starting from Senior Managers to Managers. It is envisaged that the process of cascading will be finalised by 2023. The Human Resource Development Department is responsible for the implementation and monitoring of the cascading process

8.7 Municipal Staffing Regulations

The municipality approved a Performance Management Policy in line with Chapter 4 of the Staff Regulations. The cascading of performance management to all staff is currently in process, where the following activities has been implemented:

- An implementation plan has been developed.
- Awareness Sessions was held with staff. However, this will be ongoing.
- The Ignite system has been updated with the competencies in the Staff Regulations.
- KPA's and KPI's has been created for all staff. It is currently being reviewed in order to ensure it complies with the requirements of the Staff Regulations.
- In terms of the plan the review process needs to be finalise by end of April 2023. After this all KPA's and KPI's will be uploaded on Ignite and training will be provided in the month of May 2023 to compile the agreement on the system. Agreements needs to be concluded by end of June 2023.

8.8 Service Delivery Budget Implementations Plan (SDBIP)

Parallel with the completion IDP revision, work has commenced to prepare the SDBIPs for the financial year for the various functional areas and directorates of the Municipality. The SDBIP will unpack the IDP areas and predetermined objectives into more detailed programmes, projects, budgets, and performance targets and measurement criteria. Section 1 of the Municipal

Finance Management Act 2003 (Act 56 of 2003) (MFMA) defines the SDBIP as:

“a detailed plan approved by the mayor of a municipality in terms of section 53(1)(c)(ii) for implementing the municipality’s delivery of services and the execution of its annual budget and which must include (as part of the top- layer) the following:

- (a) projections for each month of-*
 - (i) revenue to be collected, by source; and*
 - (ii) operational and capital expenditure, by vote;*
- (b) service delivery targets and performance indicators for each quarter”.*

The approved Integrated Development Plan (IDP) and Medium-Term Revenue and Expenditure Framework are implemented through the Service Delivery and Budget Implementation Plan (SDBIP). As a result, only initiatives with a budget are carried out. The SDBIP is used to address the development goals as they are deduced from the IDP that has been authorised.

National Treasury's MFMA Circular Number 13 establishes the SDBIP's format. The SDBIP must enable monitoring and evaluation and offer a picture of service delivery areas and budget allocations in accordance with the aforementioned Circular Number 13. It expressly mandates that the SDBIP contain, among other things, the following:

- Monthly projections of revenue to be collected for each source;
- Monthly projections of expenditure (operating and capital) and revenue for each vote;
- Quarterly projections of service delivery targets and performance indicators for each vote;
- Ward information for expenditure and service delivery; and
- Detailed capital works plan broken down by ward over three years.

8.9 MFMA Circular No. 13

The Circular stipulates that the SDBIP serves as a “contract” between the administration, council and community expressing the goals and objectives set by council as quantifiable outcomes that can be implemented by the administration over the next twelve months. The SDBIP provides the vital link between the mayor, council (executive) and the administration and facilitates the process for holding management accountable for its performance. The SDBIP is a management, implementation and monitoring tool that will assist the mayor, councillors, municipal manager, senior managers and community.

According to Section 53 of the MFMA, the mayor of a municipality is required to take all practical measures to make sure that the plan for the delivery of services and the execution of the budget is authorised by the mayor within 28 days after the budget's adoption. It also demonstrates that the annual performance agreements for the municipal manager and all senior managers, as required by Section 57(1)(b) of the MSA, are connected to the quantifiable performance targets authorised with the budget as well as to the service delivery and budget implementation plan.

8.10 Top Layer SDBIP Targets and Indicators

Quarterly projections of service delivery targets and performance indicators for each vote, is one of the five components of the Top Layer (TL) SDBIP that must be made public as detailed in MFMA Circular 13. The TL SDBIP includes measurable performance objectives in the form of service delivery targets and performance indicators that are provided to the community, that is, what impacts it seeks to achieve. These are drawn from the IDP programmes, services and activities that are relevant to each specific directorate as well as the statutory plans that the department is responsible for. The SDBIPs therefore are the key mechanisms

for monitoring the different responsibilities and targets that each Directorate must fulfil in meeting service delivery needs provided to the community.

8.11 REPORTING ON THE SDBIP

Various reporting requirements are outlined in the MFMA, both the mayor and the accounting officer have clear roles to play in preparing and presenting these reports. The SDBIP provides an excellent basis for generating the reports required by the MFMA. The report then allows the Council to monitor the implementation of service delivery programs and initiatives across the municipality's boundaries.

8.12 Monthly Reporting

Section 71 of the MFMA stipulates that reporting on actual revenue targets and spending against the budget should occur on a monthly basis. This reporting must be conducted by the accounting officer of a municipality no later than 10 working days, after the end of each month.

This report includes:

- Actual revenue per source;
- Actual borrowing;
- Actual expenditure per votes;
- Actual capital expenditure per vote; and
- Any allocations received

8.13 Quarterly Reporting

Performance monitoring is an ongoing process by which a manager accountable for a specific indicator and target as set out in the SDBIP continuously monitors current performance against the strategic objectives. The aim of the monitoring process is to take apt and immediate action where the indication is that a target is not going to be met by the time that the formal process of performance measurement, analysis, reporting and review is due. Section 52(d) of the MFMA compels the mayor to submit a report to the council on the implementation of the budget and the financial state of affairs of the municipality within 30 days of the end of each quarter. The quarterly performance projections captured in the SDBIP form the basis for the mayor's quarterly report.

8.14 Performance Reviews

The performance of the employee in relation to his/her performance agreement is reviewed in accordance with the following schedule. Quarterly performance evaluations are conducted for all contracted employees no later than one month following the quarter for which the evaluation is being done.

8.15 Mid-Year Reporting

Section 72 of the Local Government: Municipal Finance Management Act, Act No. 5 of 2003, determines that by 25 January of each year the accounting officer must assess the performance of the municipality and report to the Council on inter alia its service delivery performance during the first half of the financial year and the service delivery targets and performance

indicators set in the service delivery and budget implementation plan.

8.15.1 The section 72 report must include the following:

- The monthly statements submitted in terms of section 71 for the first half of the financial year
- The municipality's service delivery performance, and the service delivery targets, and performance indicators set in the service delivery and budget implementation plan
- The past year's annual report, and progress on resolving problems identified in the annual report (s72)
- Performance of service providers
- Make recommendations as to whether an adjustments budget is necessary (s72)
- Recommend revised projections for revenue and expenditure to the extent that this may be necessary (s72)

8.15.2 Monitoring and Adjustments Budget Process

The section 71 and 72 budget monitoring reports are required under the MFMA and should provide a consolidated analysis of the Municipality's financial position including year-end projections. The Executive Mayor must consider these reports under s54 of the MFMA and then decide as to whether the SDBIP should be amended. The Adjustments Budget concept is governed by various provisions in the MFMA and is aimed at instilling and establishing an increased level of discipline, responsibility and accountability in the municipality's finances. Meaning, funds can be transferred within a vote but any movements between votes can only be agreed by an adjustments budget.

In accordance with the Municipality's approved Performance Management Policy, key performance indicators (KPIs) can only be adjusted after the mid-year assessment and/or after the adjustments budget has been approved. KPIs should be adjusted to be aligned with the adjustment estimate and the reason for the change in KPIs should be documented in a report to the Executive Mayor for approval.

8.16 Internal Auditing of Performance Reports

The MFMA requires that the Municipality must establish an Internal Audit section, which service could be outsourced, depending on its resources and specific requirements. Section 45 of the MSA stipulates that the results of the Municipality's performance measures/indicators must be audited by the said Internal Audit section as part of the Internal Auditing process and annually by the Auditor-General.

The Municipal Planning and Performance Management Regulations stipulate that the Internal Audit section must on a continuous basis audit all performance and the auditing must include an assessment of the following:

- The functionality of the municipality's PMS;
- Whether the municipality's PMS complies with the Act; and
- The extent to which the municipality's performance measurements are reliable in measuring the performance of municipalities by making use of indicators.

The Municipality's internal audit function will need to be continuously involved in auditing the performance reports based on the organisational and directorate/departmental scorecards. As required by Regulation, they will be required to produce an audit report on a quarterly basis, to be submitted to the Municipal Manager and Performance Audit Committee. The MFMA and the

Municipal Planning and Performance Management Regulations require that the municipal council establish an audit committee consisting of a minimum of three members, where the majority of members are not employees of the municipality. No Councillor may be a member of an audit committee. Council shall also appoint a chairperson who is not an employee.

8.17 MFMA CIRCULAR NO. 88 OF 2017

The MFMA Circular No. 88 of 2017, its accompanying annexures and subsequent addendums provides guidance to municipalities on the adoption and internalisation of a common set of performance indicators. The implementation of the original circular has shown that the on-going planning, budgeting and reporting reforms process is complex and requires sufficient time and change management for incremental roll-out, growth and institutionalisation.

For immediate implementation purposes, the municipality have identified the indicators in Appendix A to Addendum 2 that are listed as Tier 1 or Tier 2 for our category municipality and started establishing baselines for those measurements (if they are not already being tracked) along with getting to grips with understanding the standard definitions explained in the technical indicator descriptions (TID).

Importantly, please note that intermediate cities, districts and local municipalities are still not yet required to incorporate these indicators in their IDPs and SDBIPs. Instead, the relevant indicators are included as an annexure to the IDP and SDBIP. Although the indicators do not formally have to be included in the IDP/SDBIP, the Municipality will be required to report on performance against said indicators on a quarterly and annual basis. Please do note that the roll-out process currently remains a pilot project. Reporting against these indicators will as such not be audited.

Due to the pilot process, intermediate cities, district and local municipalities will not be required to incorporate the indicators in their existing performance indicator tables in the IDP and SDBIP. Instead, these indicators will find expression in a dedicated Annexure to the IDP and SDBIP which clearly indicates the MFMA Circular No. 88 with indicators applicable to the municipality at Tier 1 and 2 levels of readiness.

Practically, piloting for all categories of municipalities (except metros) means the following as it relates to municipal planning:

- Tier 1 and Tier 2 outcome, output and compliance indicators applicable to the municipality to be included in a dedicated Annexure to the IDP and SDBIP which clearly indicates the indicator;
- Baselines should be established for Tier 1 and Tier 2 outcome, output and compliance indicators and reflected in the IDP;
- Targets for outcome indicators should be set with a five-year horizon for local government (2025/26);
- Targets for output indicators should be set on an annual basis; and
- No targets should be set for compliance indicators as these are tracked for monitoring purposes only.

8.18 The Performance Management Policy includes the following objectives that the

8.19 Municipality's PMS should:

- The PMS should provide a mechanism for ensuring increased accountability between the local community, politicians, the Municipal Council and the municipal management team;
- The PMS should facilitate learning in order to enable the municipality to improve service delivery;

- It is important that the PMS ensures decision-makers are timeously informed of performance related risks, so that they can facilitate intervention, if necessary; and
- The PMS should provide appropriate management information that will allow efficient, effective and informed decision-making, particularly on the allocation of resources.

The Performance Management Policy clarifies the roles and responsibilities of each of the stakeholders involved in the PMS of the municipality. This negates any confusion that might arise in the municipality's pursuit to speed up delivery and to enhance the quality of services to its local constituents.

The SDBIP is an implementation plan of the approved Integrated Development Plan (IDP) and Medium-Term Revenue and Expenditure Framework. Therefore, only projects that are budgeted for are implemented. The SDBIP serves to address the development objectives as derived from the approved IDP. The format of the SDBIP is prescribed by MFMA Circular Number 13 issued by National Treasury. In terms of Circular 13, the SDBIP provides a picture of service delivery priorities, budget provision and the monitoring of performance.

8.20 Five-Year Top-Level Service Delivery and Budget Implementation Plan (SDBIP)

The SDBIP gives effect to the Integrated Development Plan (IDP) and is essentially the management and implementation tool setting out the quarterly service delivery targets.

The Top Layer SDBIP include the main service delivery indicators of the municipality. The following table reflects the 5 Year Implementation Plan of the Integrated Development Plan:
